Oh, yeah. That goes without saying that you'd havea bad match without the tuner. Someone also told me that I didn't even have to put coax on it, that I coulda used the coax that was on it already. I'm no techie, but I believe that TV coax is 75 ohm. Now from what I understand you can't use that for cb. It did get me thinking though. Is it possible? Now the antenna that I am using is VERY directional. I have to pretty much point it at someones house to talk, but it works for now until I can get up there and put a A99 up. Any help is appreciated. Thanks.

Regards,
Jeff

Coming soon to a store near you, the Kluge Model 2-13 CB beam. :-)

I would be amazed if it did not work on the Channel 1 (44-50) cordless
phones. The nature of a TV antenna requires it to be pretty flat across a
broad range and Channel 2 starts at 54 MHz. TV antennas also work pretty
well at three times their freq which was taken advantage of by putting
Channels 7-13 at 176-216 MHz. Most make pretty good FM antennas as well.

27 MHz is stretching a point but it is really not all that surprising that
it found some way to resonate; maintaining directivity is a bit of a
surprise tho.

It's plenty flexible. Don't sweat the small shit, man. Just go get the
antenna and be done with it. Figure it out as you go along.

It ain't rocket sceience. :-)

Effect Radiated Power is defined as the effective power found in the main
lobe of transmitter antenna. It is equal to sum of the antenna gain (in
dBi) plus the power (in dBm) into that antenna.

Here Sparky starts going off topic as usual and noted by Toll Free, No one
mentioned anything about production antennas or gain figures off a package.
A 10 dbd antenna is 10 db stronger than a dipole measured at the same
height. The reference antenna is always measured at the height as the
antenna being tested.

> the value must be real.

The whole point of the matter Sparky is It was a hypothetical question posed to SSB, you and he tried to skew the results by trying to show your brilliance by trying to add the variables. The antenna gain figure was set at 10 db all that was needed was for him to figure the equation to have 10 watts ERP for the contest.His only question should have been how much was coax loss, so Ill say it again real slow for you it is no different than the question he answered on the FCC Amatuer Extra Exam, They give a antenna gain figure, coax loss firgure and ask to solve for erp.

I doubt seriously if there was much, if any, directivity. It would do
a good job of transmitting any harmonics produced by the CB set, however.

The larger antenna is pretty stiff as I recall, but do the math. You put the short antenna on your roof and it hits the supports. How much of it hits, an inch or more or does it just nick it? What is the difference in height between the roof and the trunk lid? The longer antenna is probably going to stick up even higher mounted on the trunk than the short one is mounted on the roof, but then the short one really didn't work anyway. Yes, better to go slow or take it down in the garage, but proably not practical. Drive very slowly. You WILL knock the magmount loose. Take my word for it.

Why? You asked a simple question and I answered it. Why don't you
compare my answer and see how consistant it is with the post that
began these threads -- a station with 10 watts ERP. Did the rules
require transmission line? No. So what's your problem?

Oh, come on now! You can't see that an antenna will radiate
differently at different heights above ground?

>It is relevant to ERP since transmitter power is part of the equation.

Alright, let's get to the bottom of this. You want to know how to determine ERP? Fine:

First, map your field using an absolute field strength meter. Do this by taking readings at (ideally) equal distances and equal degrees of arc, and at various altitudes. Since these readings are only points, you need to apply your calculus to derive the proper 3D map of the field. And don't ask me to teach you calculus. From that map you can find the angle of maximum radiation, as well as the value of field strength for a specific distance from the radiator at that angle. Since you have already mapped your field, you then derive the total power radiated by the antenna. Then compare that with the antenna's input power. Next you measure the RF current and voltage in the antenna (easy enough with an RF ammeter and voltmeter). Use each measured value to verify the other measured values (power, voltage, current, radiation resistance, etc). They don't always agree, so measurements and calculations must be done over and over to resolve the errors.

BTW, transmitter power is NOT part of the equation -- antenna input power IS. There is a distinction: You can have multiple antennas on the same transmitter, or multiple transmitters on the same antenna. Same difference with transmission lines. This should give you a clue: ERP = Effective RADIATED Power. Transmitters don't radiate, antennas do. Same difference with transmission lines (again, ideally). So leave transmitters and line losses out of ERP. I'm sure the ARRL and others have modified the equation to make it simpler for hams to understand, but that doesn't make it valid, just easier to use in a practical application.

The whole point of the matter, McFly, was that you can have
hypothetical stations and you can have real stations. The thread was
about real stations.

A reference antenna is almost never used. Absolute field strength
measurements are much easier.

oms
> an where do you check it at any help would be app

There are several approaches but all of them require some test gear. A lot of people like the MFJ 249B which while not cheap does the job for all sorts of dubious purposes.

Impedence has both a resistive and reactive component so an antenna dead on the nuts would be 50 + 0j which you may have learned as an imaginary 'i', inductive being + and capacitive -. As i was in use for current, electronics people use j. But because it cannot be dead on the nuts on more than one freq some compromises are in order, most of which make no real diff in the signal but help explain why you have the SWR you do and whether you should sweat it.

There are also some conditions in which a 50 ohm reading is not good. In the case of a whip, if it goes much above 34 you are likely to have a really crappy ground or some series resistance loss that is producing more heat than radiation. A significant reactive component at channel 20 would also tend to indicate that something is rotten in the car body.

Message 1: You do gots to know what the readings mean. 50 good, 45 bad, 35 worse is not quite enough.

Message 2: SWR is something of a fetish on 27 MHz and with some degree of reason given the need to preserve finals. But it is overdone. Assuming that you find it to be 45 or 55 and set about moving the coil tap and manage to get it done you are about as likely not to notice the diff or find that you were loading the rear window defogger a bit or you had a corroded ground that was the real problem all along.

If you regularly fiddle with antennas like helical ones, or build a lot of goofy multiband common feed arrays for your ham station then by all means get the 249B and learn how to use it and the bread will return many fold. If you are playing with a CB antenna to drain the last drop out of it, you are basically wasting your time.

What you need is a swr meter or a watt meter which will read your forward power and reflected power. There are many swr charts on the internet as well a 2:1 swr is either 100 ohms or 25 ohms you want your swr anywhere in that range of course 50 being perfect. You also want to check it as close to the antenna as possible for the most accurate reading as your coax lenght will eat up part of the relected power and it will look like a better swr.

The thread was about the contest saying 10 watts erp, so I asked the question if someone has a antenna with 10db of gain how many watts would there radio have to putout? Thats what this was started about, who cares about radiation resistance and ground losses they are included as when you give the antenna a gain figure. The antenna had a gain of 10db, hypothetical or real that the question that was asked. Every qoute and definition of erp that I posted was from either the Arrl Book or a web page with credible references you don't agree with what they all say? I have yet to see much of what you said mentioned in those same areas. Just because you say it Sparky doesn't make it so. So when you ask people to cite refrences expect the same in return you still haven't provided any changed the topic of what was asked. I hate to admit it but seriously Toll Free was right about you.

What are you talking about Sparky a reference antenna is always used for
gain measurments, If you are going to reference gain what are you
referencing it to.
What are your field strength measurements compared to? Go lay down Sparky.

4320. FS: 10 meter 100 watt amp w/pre-amp for RX

Newsgroup: rec.radio.cb
Date: 2002-03-19 03:15:14 UTC
From: we6a@wt.net
Message-ID: <4522def3.0203181915.4963727a@posting.google.com>
Source record: 118632

I have in excellent condition a 100 watt amp with built-in rx pre-amp for sale. It works perfectly, full power output. Sell for $75 delivered.

Robert

Thats the area where I was most of the day, right next to the ARRL
table was the Fulton County club table, and right behind that was the
Henry County club table where Fred KI8BP was buying / trading /
selling boat anchors. I want that Grundig SW reciever he has. He lives
3-4 blocks from me and I'm going to run over there someday and see
what he has in his garage heheh.

You might have seen me who knows, I was wearing a blue ball cap with
American Red Cross embroidered on the front, and a blue t-shirt from
the F.D.N.Y. Disaster Assistance Response Team D.A.R.T. on the back. I
also had a black leather breifcase with a SKYWARN decal on it.

I guess NYC would be best as it is a little closer to you and we both end up
paying a toll to keep it fair(fare).

> Chinatown's always a rip in the morning. I used to make the hour trip
> just to enjoy some Dim Sum. While were in the area, we can dip on over

Really bad idea. I was there this weekend and you are talking about going
through the middle of "ground zero". Traffic in that part of town is just
plain unbelievable! It took me over 2.5 hours to get from my house in Jersey
to the Brooklyn-Battery Tunnel.

It happens to be right in one of
> my favorite neighborhoods, Soho. (South of Houston - pronounced
> HOUSE~TON.) Plus it's only a few bolcks away from Chinatown.

If in the neighborhood you should check out 21 Mott St. restaraunt. Many
times voted the best Chinese food in the city and one of my old favs from
when i was living in the city going to school.

4325. Re: ant tuning

Newsgroup: rec.radio.cb
Date: 2002-03-19 04:21:48 UTC
From: 'Doc <w5lz@icok.net>
Message-ID: <3C96BCC0.CE3AFEE1@icok.net>
Source record: 118637

GYoung,
Probably the easiest way is to connect an SWR meter
between the feedline and antenna. If the SWR is about
1:1, then you can assume that the antenna has a 50 ohm
input. This isn't the 'best' way though.
Probably the best way is to use one of the antenna
analyzers.
'Doc

4326. Just a little "funny"

Newsgroup: rec.radio.cb
Date: 2002-03-19 04:24:38 UTC
From: Jerry Oxendine <joxendi@bellsouth.net>
Message-ID: <3Zyl8.109607$Yd.5612703@e3500-atl1.usenetserver.com>
Source record: 118638

Often we read here posts from people bragging how their "8-pill" rocks,
stomps mudducks,
and such as that. I just wanted to post this because it WAS funny when it
happened. Where I worked for 23 years until retiring in 2000 (at 52--YES!),
we had a regular round
robin truck trip that left every Friday night on a Macon, Ga, B'ham, Al, and
Knoxville, Tn,
run. One time the regular driver was in the hospital, so they sent a
substitute driver. I was
carrying my ham handheld around mostly to listen to the weather if the sky
threatened, and
the driver, a big CB afficiendo, noticed it and began to make fun of it. He
bragged about how far he could "git out" with his big "leenyar", and how
puny that little handheld was. That
was OK by me, except he just couldn't let it go, and just kept on mocking
me, and ham radio in general. Finally, he did manage to irk me, if for no
other reason than he just kept going on and on about it. I told him his big
linear was fine and dandy, but I'd bet him $100
on the spot that that "puny" little "mudduck" radio would talk further than
his BIG linear. That
REALLY got him laughing, so I asked him if it was a bet or not. He agreed,
so I let him try first with his kilowatt "leenyar". I figured that at that
time of day, he wouldn't get all that far,
and the HF "MUF" was below 18 MHZ. He only got a couple locals around
Charlotte---
no more than 8 miles away. The conditions just weren't there. OK, I told
him, it's my turn.
I dialed up the Mt Mitchell, NC. repeater on 145.19 which happens to be at
about the 4500
foot level and about 100 miles from me, and made a general call. Instantly,
another ham answered me in Louisville, KY, and, although we both were
scratchy, my point was made.
That driver's mouth almost fell down to his feet when the guy said
Louisville! His expression
was worth it all! He just couldn't understand it. How could a 5 watt
handheld out distance a
KW linear? Oh, I failed to mention that I was going thru a repeater.
CHEAT! CHEAT!
Naw, I didn't take his $100. I then explained how the little radio worked
and the principle
of repeaters. But, STILL, I out talked him because my little 5 watt signal
had to travel that
100 miles to the mountaintop repeater, and he only got out around town.

No harm meant, it was just funny. I was just getting back at him for making fun of me, and
I really had him flummoxed...until I told him different.

Message-ID: <a76gv301i1v@enews2.newsguy.com>
Source record: 118642

have Titan AM/FM/SSB 10/11m radio 26.500 to 29.995mhz, that I've had for about 6 months. For some reason the transmit audio on all the modes has taken a dump. It transmits fine on all bands with specified pwr limits. I've checked it with another radio that is the same and the mic works on that one, so that's not it.
I don't want to mess with it. If you want to give it a go, I'm selling it for $50+ shipping and you fix it.

Payment will be COD or PrePay with cashiers check or money order only

4330. CB for Jeep Wrangler: Suggestions?

Newsgroup: rec.radio.cb
Date: 2002-03-19 05:10:46 UTC
From: Tomas Byrnes <tomb@NOSPAMbyrneit.net>
Message-ID: <Xns91D5D7745ED91tombbyrneitnet@68.6.19.6>
Source record: 118641

I have a Jeep with one of the Tuffy lockable center consoles and was wondering if anyone
has any recommendations for CBs and ideas on how to mount them.

The purpose is to have a CB to use for Jeep events, which are more and more REQUIRING hard-mount CBs (I have a hand-held, but that's a bit unwieldy when you're off-road).

I currently have a Uniden Oceanus Marine VHF radio, which is what everyone in Baja uses, but obviously, that's illegal in the US, and no-one on the trail has one anyway.

I have thought about using the Cobra 75 WX ST, which is a remote mount unit, so that I could run marine and CB if I wanted. Other recommendations, from Obi-Wan's jeep site, are the Midland 77-120 ESP.

The biggest question I have about the full-size units is mounting. The Oceanus is a DIN radio, so it just drops into the well, and I don't even need to bracket it, which makes it easy to take out and store when I'm in the US. I can't seem to find ANY DIN CB radios.

Any ideas?

Also, good antennae/mount points for CB suggestions? The marine VHF goes to a Shakespeare 9' whip on the right rear quarter. I was thinking of mounting the CB on my wilderness rack, to get it above all the metal. I had been looking at the firestik tuneable ants, but some guys over in rec.autos.jeep said that those were a bit stiff for trail use.

Are there ratchet mounts for CB antennae the same way there are for Marine VHF? It seems that almost all CB ants. are bottom fed throught the antenna base itself, unlike the marine ones which have a hard mount and a side exit coax.

I'm a US Army qualified Radio Repairman, so I understand how this stuff actually works, but for some reason, the stuff available on the Civ. market doesn't quite touch the SINCGARS or AN/VRC-45 series radios ;-).

Thanks for any ideas!

Sparky:

I believe the actual question asked was how much power would a transmitter have to put out to get 10 watts ERP off a 10dB rated beam...

Now, I could have answered that question, had I known a) if the antenna was in the exact same configuration and environment it was in when the 10dB was measured b) the length and loss figures of the coax used c) if the antenna was NOT in the same environment used when 10dB was measured, what the other factors are that may affect the gain of the antenna.

I still only have the 10dB figure, so I can't answer the question. George won't provide it, because he's simply being obtuse. No skin off my teeth.. The only time I see his/her/its posts is when they're quoted now, as he/she/it is relegated to /dev/null on my system. No great loss, really...

If I had the numbers, I might be able to come up with an estimation of how much power would be needed, but the question isn't answerable with the data at hand.. In high school, we'd write "NEI" on questions like this in calculus or physics class, and get full points.

So...

NEI

If you are working in dB - it is the sum.

That's all fine and dandy, but where did I ask you to cite a
reference? Hell, all someone needs to do is look up ERP in their
rat-shack electronics dictionary to see that it is antenna input power
times antenna gain. So why were you so insistant that Sideband was too
incompetent to figure that out for himself? And after I re-read the
thread, I see that all he did was ask a simple, civilized question and
you jump his shit with "Holy Shit, a rocket scientist" and whine that
your question was meant for Tim, totally ignoring that he wasn't even
answering your question. It looks like all you wanted to do was argue.
What's up with that?

The FCC does not consider antenna efficiency or antenna environment when
they state a max ERP allowed. All that is considered is the power into
the antenna and the manufacturer's rated gain of the antenna. Direction
from the antenna is immaterial.

You can get to this indirectly by measuring the transmitter output, and
either calculate the coax and connector losses (or measure them). These,
combined with the rated gain gives the ERP.

But the FCC also has another rating - which is based on power density at
a given distance from the antenna. That rating does include the environment
of the antenna and its efficiency.

Train, as I've said before, I am Aaron Voobner, and I am as real as
you are. Just like it takes some work to find your information, mine
is out there on the net waiting for the truly devoted to discover.
Some out of the box thinking is necessary however. For example it
could be as simple as a different spelling, e.g., A. Ron Veubner. Or
it might be a basic anagram, e.g. Voobner = Borveon. Or it could be
listed in a foreign language or in a different mode of text. Extend
yourself a bit.

You need an impedance bridge. They are very simple and useful
circuits. One example would be the old Heathkit AM-1, for which you
can find the entire manual here:

ftp://bama.sbc.edu

And if you want to check your antenna input impedance you should
probably check it at the input to the antenna.

Actually, they don't even consider manufacturer's rated gain, except
where that gain is the maximum possible gain from the antenna.
Sometimes they will even reject that figure and require verification
of antenna gain and/or ERP for a given installation.

> Direction
>from the antenna is immaterial.

ERP is determined at the direction of maximum gain, directional or
not. But if it is directional it should be stated as being so (for
broadcast and commercial services).

>You can get to this indirectly by measuring the transmitter output, and

That's not "another rating", it is the preferred method of measuring
ERP (for broadcast and commercial services) because it doesn't assume
any gain figure for the antenna.

It's not so easy as you make it sound. The 2 meter "brick" amplifier
module loses gain rapidly above 174 Mhz. These modules are constructed
for specific bands. The 70 cm "brick" will also have problems on 222.
They cannot use the same band switching techniques that they use on HF
rigs, that use descrete RF power componenets. If you would be happy with
5 or 10 watts output, you might get away with a MMIC amp similar to what
Icom did with the original 706 on 2 m.

Sure it's technically possible, but not economically viable, from a
marketing standpoint.

> mess.

Ah! You're reading my mind. By placing critical circuit componenets
(PLL, audio processing etc)inside VLSI surface mount chips, it would
make modification extremely difficult if not economically prohibitive.
It would also take the technology out of the hands of "hack"
technicians, who will not have the proper equipment to properly work on
the radios. In most cases, the radio will become a disposable item, as
the cost to replace the "motherchip", would almost equal the cost of a
new radio. The other plus, is that they could make a Uniden Grant style
radio the size of 2 packs of cigarettes (much like a typical 2 meter
rig).

> on marine freqs for much the same reason.

Truckers typically want 2 things. The first is the ability to get
highway information (and the infamous "smokey reports"), and chat with
other over the roaders. The other is the quiet getaway channel that they
can go to when they want to rag chew a little longer than what would be
considered proper ettiquette for channel 19 (Afterall, a QSO on channel
19 might step on a distant smokey report). Having both in one rig is
pretty much a matter of convienience. As long as that quiet channel is
there, it doesn't matter what the actual frequency is. I suspect that
the high sunspot skip level has been at least partially responsible for
truckers (and others) moving further and further away from the "normal"
band, in order to find more quiet conditions. Once the skip dies down,
they may move back down to the lower "bands" of channels.

Actually the same thing. Channel 19 '2up' is 28.085. Things get hostile at 3 up (28.535)

Calling it bootlegging is probably too strong. I doubt if most have a clue where they are.

We have a local project here to do some photo trapping using some of the gazillion cameras on I-80 of people on 10 and in fact it works more or less as a few companies have discovered. Like most amateur projects it is cheap, haywired, and has a lot of officialdom convinced there are more wierd people in this world than they thought. Works better at nite, recognizing skip is a bitchkitty. In at least one case we proved the truth of a book title from years past, Never Trust a Naked Busdriver.

I will admit to having a bit of a guilt trip about this because we are really zapping the wrong people. But chalk it up as collateral damage in the war to defend 10 meters. I can sleep nites -- which is more than the poor SOB humping a sleeper down the road can say.

Isn't that "COULDN'T care less?" I always see people write/say could
care less, but think about it. If you "couldn't" care less, that means
you don't care. Oui?

> Wow. Great victory, Bert.

No, just an interesting story. Let me tell you about a semi-recent
"victory" though. I went down to the corner 7 Eleven and noticed a SUV
with one of those quad-mag mounts on the roof. You know, the one with
the four really heavy-duty magnets. It was supporting a 5 or 6ft.
firestick style antenna. I walked in and asked the only guy in the
place (Standing at the checkout counter.) if the quad-mount was his

and if so, what was he running? My AR vanity plates were plainly visable from the counter and he appeared a tad hesitant. I prodded him a touch and asked 10-meters, 11-meters, or both? Well, the ice was broken and he admitted sheepishly that he's running a "6900 on 11," but has listened to both 10 and 12 and is sincerely interested in becoming a ham. I gave him my spiel, explained what it takes to get his General, offered my help and that's the direction he's moving in now. I also explained that the privileges he'll earn are far to valuable to jeopardize by running unauthorized ham gear on 11-meters. He seemed to genuinely "get it." Last I heard, he's now a Tech "plus" and scheduled to take the General. Now THAT'S a "great" victory. Have you turned any freebanders into ex-freebanders lately, Aaron?

You have the number you simpleton, it is 10 db that is the measured gain, it is not off a cracker jack box.The only question you should have asked was about coax losses or you could have said How many watts it was not considering coax losses if there were any. What did you ask the FCC when they gave you the exam and it stated an antenna with 10 db gain and coax losses of 3 db Why did you not answer that question and want more info on the antenna gain figure? You are just being a jackass SSB, and seems either you cannot or don't know the simple answer to this simple question.

Thank You very much Bill. It is just that simple, they want to make up there
own rules as to how they think it should be measured.

From Merriam Webster Collegiate:

One entry found for irregardless.

Main Entry: ir&#65533;re&#65533;gard&#65533;less
Pronunciation: "ir-i-'g&#65533;rd-l&s
Function: adverb
Etymology: probably blend of irrespective and regardless
Date: circa 1912
nonstandard : REGARDLESS
usage Irregardless originated in dialectal American speech in the early 20th century. Its fairly widespread use in speech called it to the attention of usage commentators as early as 1927. The most frequently repeated remark about it is that "there is no such word." There is such a word, however. It is still used primarily in speech, although it can be found from time to time in edited prose. Its reputation has not risen over the years, and it is still a long way from general acceptance. Use regardless instead.

A middle aged woman had a heart attack and was taken to the hospital. While on the operating table she had a near death experience. Seeing God she asked, "Is my time up?"

God said, "No, you have another 40 years, 2 months and 8 days to live. "Upon recovery, the woman decided to stay in the hospital and have a facelift, liposuction, and a tummy tuck. She even had someone come in and change her hair color. Since she had so much more time to live, she figured she might as well make the most of it.

After her last operation, she was released from the hospital. While crossing the street on her way home, she was killed by an ambulance. Arriving in front of God, she demanded, "I thought you said I had another 40 years? Why didn't you pull me from out of the path of the ambulance?"

(SCROLL DOWN....You'll love this!!!)

God replied, "I didn't recognize you."

And why did he lie about having a CCW permit?

Inquiring minds want to know. Actually, we DO know.

He lives with his mother cuz he can't provide for himself.

He lied about the CCW permit to act like he is a big man. He thinks that impresses people. Also, because he fears life so much he has to make people think he is armed out of compulsion to protect his sissified fear stricken soul.

ALSO, He lied about being at the Toledo Hamfest because he is a coward and thinks that he can make you keyclowns think he is not one.

There ya have it. The main rap on Chuck Adkins, K8CPA. Threatener of women, children and pets. Disgrace to amateur radio. Oinking filthy slimeball who can't do squat except make threats.

God (Jesus Christ), is on ALL the CB and Ham and TV and broadcast band and Shortwave radio frequencies ALL the time, listening to ALL the wickedness going on, and when the cup fills up, he PULLS the PLUG ! So IF we repent of our sins (violations of God's Laws), we have Joy, Life, and hapiness. IF we don't, we get the plug pulled!

WHO are the "Motorists Advocate?" What do they advocate--Big trucks or cars, or both?
Dave!!!!!!!!!!!!!!!!!!!!

UUUHH, You've never heard of the Crusades?

The west just grew out of its "MY RELIGION IS THE LAW AND YOU WILL DIE IF
YOU DON'T BELIEVE" phase (at least most of it did, Janet Reno seemed to like
incinerating people she disagreed with), whereas the rest of the world is
still not quite clear on the concept of living in a world where no-one
agrees on everything.

Problem is, when the biggest weapon you had was a large spear, intolerance
was a localized problem, now, all it takes is one nut-job with a cause to
kill the whole planet (assuming they find the right virus).

Axl,

If the SWR increases when you increase the frequency it means that your antenna needs to be shortened a bit. If the SWR is higher on channel 1 than it is on channel 40 it would need to be made longer. a 27 inch antenna is only about 27% of full quarter wave height and as such tuning will be more critical and the antenna will be less efficient, meaning you will have less effective radiated power (on the order of 3 - 5db, than you would with a full size quarter wave of 102 inches. Remember, 3db reduction is like taking your 10 watt pep output down to 5 watts and a 5db reduction takes the ERP down to under 3 watts. With such a short antenna you will most likely not

approach a flat SWR from channels 1 through 40.

You follow it down into the anthill, attach a wire to its thorax and check it to the wall of
the tunnel. That is, if the ant isn't grumpy! Sorry, I'm feelin' frisky today.

> Imagine that, Aaron. Somebody actually paid attention to the "For
> Export Only" sticker.

No sense of humor Bert. Since the stereotype is that most CBers are
looking for "linears", I exaggerated for ironic effect; i.e. the shop
likely had ham linears for sale but would not sell them without seeing
a ticket.

> > You must be scarred for life.
>
> Now do I seem like a "scarred" individual? Yearning for attention,
> whether it be good or bad.

No, my point is that you couldn't handle a ham shop owner back in the
old days giving CBers an "attitude". In most cases they deserved the
attitude.

> > But NOWADAYS the clerk could CARE LESS if you break federal laws or
> > not.

That's what I can't figure out about you, Bert. You do something like
the example above, which I see as reflecting the genuine old 'ham
radio spirit' of helpfulness, sharing, respect for the law and respect
for the rights of others. Yet at the same time you make posts that
quite cleverly indirectly encourage people to break the law, bootleg
on unauthorized frequencies, and support the manufacture and sale of
illegal gear to unlicensed individuals.

> Have
> you turned any freebanders into ex-freebanders lately, Aaron?

I am working on getting a whole bunch of export radio dealers busted.
That ought to result in a few "ex freebanders".

I was there, bitch and I *CAN* prove it.

I bought 2 items, was there around 9:00a.m.

KB8LTT chuck and Marvin W8JLH both saw me.

W8JLH was the one selling the palstar Tuner, and the icom radios.

I was even gonna buy the Kenwood TL-922A amp that was there.

The "Crusades" were CATHOLIC (Spain is & was Catholic), not Christian!
Christians belong to the Church talked about in the book of Acts, Catholics
are in the "Harlot church" of Revelation 17. It says that they are ALSO
guilty of the Blood of the Saints (Christians). They have killed MANY
through time, including many Indians in cental or south America.

>
> The west just grew out of its "MY RELIGION IS THE LAW AND YOU WILL DIE IF

First of all, "earth" is NOT a planet. It IS Earth. Second of all,
"tolerance" is NOT a Biblical concept, but a Humanist one. We are NOT to
tolerate evil and anti-Christ religions. The anti-christs can go back to
where they came from, so God can judge them accordingly.

>No sense of humor Bert.

I have a great sense of humor, Aaron. And the first person I'm most willing to laugh at is me. But this "you musta been tryin' to buy an amp" is getting real tired.

>Since the stereotype is that most CBers are
>looking for "linears", I exaggerated for ironic effect; i.e. the shop
>likely had ham linears for sale but would not sell them without seeing
>a ticket.

Uh huh...

>No, my point is that you couldn't handle a ham shop owner back in the
>old days giving CBers an "attitude". In most cases they deserved the
>attitude.

Actually Aaron, I don't think you made a point.

>Hail, another hard-won grammatical victory for you, Bert.

A mere bag of shells. BTW, I make at least one spelling or grammatical error in just about every one of my posts. You're comment was just an easy segue to a question that I've always wanted to ask. (But never seemed important enough to remember.)

>That's what I can't figure out about you, Bert. You do something like
>the example above, which I see as reflecting the genuine old 'ham
>radio spirit' of helpfulness, sharing, respect for the law and respect
>for the rights of others.

That's because I'm the genuine article, WYSIWYG. I've made my mistakes and have learned from them. I try to help others not make the same mistakes.

>Yet at the same time you make posts that
>quite cleverly indirectly encourage people to break the law, bootleg
>on unauthorized frequencies, and support the manufacture and sale of
>illegal gear to unlicensed individuals.

I don't encourage anybody to "break the law." However, I also don't lie in the name of righteousness. If I think the 155.3 mi. rule is stupid and unenforceable, I say so. If I believe that you can run 30 "clean" watts on the legal 40 indefinitely and never get caught, I say it. If I think that there are some pretty darn good ops on the freeband, I say it. If I happen to meet up with a freebander, my angle of attack re. AR recruitment doesn't begin with calling him/her a "federal criminal" because, in all honesty...it'd get both of us nowhere. I'd rather teach than preach, Aaron....and I'm pleased as pie with the results thus far.

>I am working on getting a whole bunch of export radio dealers busted.
>That ought to result in a few "ex freebanders".

I doubt it, Aaron. But it may result in an increase in the sale of the Yaesu FT-840, now just $599.99.

73 de Bert

Habeeb isn't allowed down in da sticks in TN but I have talked with some and buy things from them when in Ohio. Most of the Palistinians are Catholic. I saw a Mooslim woman down here in the BIG city and I told her that she CAN take off the buqua here because this IS a Christian Country (or it use to be in most places).

READ Timmy, READ ! I asked the question: IS there a practical application FOR COAX (different coax) to be hooked to the TV antenna. The answer would be NO. You would use the TV coax, the TV antenna without problems (meaning you could NOT use one over 10 years old, UNLESS you fixed it with parts like I have in the past. It STILL wouldn't work well, because it is NOT matched for CB freqs., and is horizontal. Never mind thye antenna tuner for it---GET A CB antenna instead for better performance!
Dave!!!!!!!!!!!!!!!!!!

>as Toll Free did and step aside when you started mentioning things not
>related to the topic at hand. Thanks for the education.

What did I say that wasn't related to the topic? While I was talking
antenna gain and ERP you were whining about semantics, so how did I
stray any more than you did? BTW, did you ever stop to think that this
whole exchange could have been prevented simply by stating that all
those factors are considered when determining antenna gain? You
didn't, and chose instead to start whining and getting all defensive.

You missed the point, so what? I do that once in a while myself, and
so does everybody else. But why did you feel the need to compound your
mistake by acting like an ass about it? And now you wax sarcastic in
my direction because -you- goofed? Ok, whatever. Just know that my
first post in this thread was never intended to make you or anyone
else look stupid, or to start any arguments. It was just to help
clarify a point. I will ask that you re-read the thread and take it
the way it was intended: try pulling the boxing gloves away from your
face as they seem to be obstructing your view.

Hey Dave, during the Crusades, the only "Christians" were Catholic. I believe you mean "Protestants" when you say "Christian". I suggest some study of the History of Western Civilization is in order.

To this day, Catholics are a subset of Christians, whether your bigotry allows you to accept that or not.

Also, if you are blaming Spain, I thinl you mean the Inquisition. The Crusades were called by the Pope (who was Italian at the time).

As for "religion determines law" see the 1st amendment to the US constitution for refutation.

As for the rest of your invective. I suggest re-reading the New Testament. It is only for God to judge.

Boy you really don't have your facts straight! Most Palestinians are MUSLIM
(note spelling), you may be confusing yourself with Lebanon, where there is
a sizeable Christian (of various sects, including Catholic, the largest
Christian sect) MINORITY.

I saw a Mooslim woman down here in the BIG city and I
> told her that she CAN take off the buqua here because this IS a

What does Christian have to do with telling someone not to wear a particular
peice of clothing, especially when its purpose is modesty?

I think your religion is Bigotry and Ethnocentrism!

Do you run around in white sheets from time to time, prehaps?

"ME MUDDER"
When me prayers were poorly said
Who tucked me in me widdle bed
And spanked me till me arse was wed

Me Mudder

Who took me from me cozy cot
And put me on the ice cold pot
And made me pee if I could not

Me Mudder

And when the morning light would come
And in me crib me dribbled some
Who wiped me tiny widdle bum

Me Mudder

Who would me hair so neatly part
And hug me gently to her heart
Who sometimes squeezed me till me fart

Me Mudder

Who looked at me with eyebrows knit
And nearly have a king size fit
When in me Sunday pants me s***

Me Mudder

When at night her bed did squeak
Me raised me head to have a peek
Who yelled at me to go to sleep

Me Farver!

Why do I need to quantify what Antenna Gain Is I thought you guys knew
already you certainly acted like you did.

> You missed the point, so what?

Sorry Frank you and SSB missed the point, If you ask me how many HP my motor
has and I tell you 300 hp will you ask me how big the cam is and whats the
compression, etc Does it matter if it is a small block or big block. No
Frank it doesn't matter. Don't blame your ignorance of antenna gain on me
Frank.
Sorry I didn't spell it out for you I thought you were a electrical guru
and knew antenna gain is a function of many variables after all this that is
what antenna gain is the end product off all your variables right? How could
we arrive at a gain figure if all those functions are not met Frank. In your
expert opinion please. btw still waitng on any refreences backing what you
said Frank.

I do that once in a while myself, and so does everybody else. But why did
you feel the need to compound your
> mistake by acting like an ass about it?

Your and SSB's ignorance of the meaning of antenna gain is not my problem
Frank So far your defenition of ERP matches none that has been cite or found
yet doesnt not constitute.

And now you wax sarcastic in
> my direction because -you- goofed? Ok, whatever. Just know that my
> first post in this thread was never intended to make you or anyone
> else look stupid, or to start any arguments.

Sparky, you didn't make anyone but yourself look stupid but you and SSB,
Ask Bill Nelson if you need some more help Or Ill provide the links for you.

> It was just to help clarify a point. I will ask that you re-read the
thread and take it
> the way it was intended:

Sparky, I take it just the way you layed it out there . I will ask one more
time to provide a refrence pointing out exactly my mistakes Provide a link
or a refrence to dispute exactly what I said as being false. I have posted
ones that prove your definition of erp and gain as skewed. I hate to keep
bringing it up but Toll Free sure pegged you Sparky. I understand why he
gave up with you.

Well Tim, and I'll top post like you did....it's because you can take anything and exceed it's specs and get more out of it. But, you will not do that for very long. For instance, would you drive your car at 120MPH every day, all day? I doubt it, even if it were legal. Why? Do you think it might not hold up? I'm not saying that you can't get more out of something than it's rated for, but what I AM saying is that you cannot do that reliably. Why do you think that the manufacturers of these devices rate them as they do? Sure, they could make lots more money if they could guarantee ratings over a wide range of voltages, but the fact remains that they were designed to work within certain parameters, and when you exceed these, you will have failures, and that is not why they are in business. If reliability is not an issue, then what the hell, go for it......you can always replace them. And then again, there is the Voodoo factor. Many of these people claim more than is actually possible, no matter what the voltage....and we all know about the trouble that got Miss Cleo in, don't we?<g>

One more thing Tim, transistors really suck. If you know your shit, and aren't just a soldering iron monkey, you can do much more with tubes for the same amount of money and time, and much more reliably.

That's an interesting one...
You obviously agree that the range changes with height above ground, but not gain.

The range changes because the radiation pattern changes, sending more signal at a lower angle when at certain heights above ground.
If the pattern has changed, surely the gain can be said to have changed too, as the power sent in the preferred direction has changed. The manufacturers will most likely quote gain measured at a certain height above ground, where the best figure will be obtained.

For some examples of patterns at set heights:
23rd Edition Radio Handbook, p22-2.

Hi Dave.

Try Pop3 Scan Mailbox.
You can download it FREE from:

http://www.kempston.demon.co.uk/smb/>
http://www.netcomuk.co.uk/~kempston/smb/>
http://www.kempston.freeserve.co.uk/smb/>

You can see a list of the e-mails waiting on your server without downloading them. The list includes senders, subjects, size,s and recipients.
You can delete any e-mail while it is still on the server (without downloading).
You can also get it to filter your mailbox by sender, subject, recipient (those from friends may say "TO: Dave", spammers will give your full addy in the "TO:"). You can even set it to delete any mail where the sender, subject, etc. is not on your "accept" list.

Great piece of software, I use it to filter my mailboxes while OE is downloading the newsgroups.
When the newsgroups are finished, I collect the remaining e-mails with OE (SMB is just a filter, although it can display the text from any e-mail on the server, if you wish to check first).

Brainbuster.

>> the way it was intended:
>
>
>Sparky, I take it just the way you layed it out there . I will ask one more
>time to provide a refrence pointing out exactly my mistakes Provide a link
>or a refrence to dispute exactly what I said as being false.

What was false, other than your fervently defensive declaration that
antenna height has nothing to do with ERP? I agreed with you on the
definition of antenna gain, we agree on ERP. Does your brain have a
short circuit? Your only mistake was being a jerk because you mistook
my post as some sort of personal attack or something.

> I have posted
>ones that prove your definition of erp and gain as skewed.

Which ones? I checked them and, except for substituting "transmitter
power less feedline losses" to determine antenna input power, they are
fine. You are beating yourself over the head, for what reason I can't
figure out.

> I hate to keep
>bringing it up but Toll Free sure pegged you Sparky. I understand why he
>gave up with you.

Because he knew he was wrong but was too full of himself to publicly
admit it. The irony here is that you were generally right, but you
misunderstood my post and copped an attitude, and now you are trying

to save face. So I'll make it real easy for you -- if you need to have the last word just delete this paragraph and I'll won't post a reply. OTOH, if you just want to continue arguing with yourself that's fine too. Fair enough?

I agree with your assessment and attitude WRT the CB radio situation.
Human nature, such that it is, tells us that if you give someone an
attitude, they will likely not pay much attention to what it is you're
trying to say, good or bad.

This also illustrates my point about "intent" of the law vs. the
"letter" of the law.

I, personally, don't have a problem with someone who keeps a low
profile, runs equipment that is clean, and at modest power levels, and
is considerate of the rights of other operators. If that means that same
operator occasionally escapes to a "freeband" channel or bumps up the
power a few watts to maintain contact with their base/mobile, over
adverse conditions, then so be it.

That being said, I do not support protesting the 155 mile limit by
deliberately engaging in skip talking. Talking skip is the primary casue
of the noise levels and interference that hamper the ability of locals
to communicate with their respective friends and family. It goes with
"respecting the rights of other operators". Skip talkers are not being
considerate (or even cognizant in many cases) of the potential
interference that their activity can cause to people that are not even
in the same area.
Since the intended purpose of CB radio was short distance LOCAL
communications, the 155 mile limit is reasonable in that vein, even if
the frequency band is not always conducive to only local communications.
I've always favored moving the CB band to somewhere in the VHF spectrum,
where skip would be a rarity, and that whole piece of the equation would
be effectively removed.

As for recruiting CBers to the ham radio fraternity, my attitude is
this: Most CBers, that are serious enough about radio that they are
running on the freeband, are undoubtedly aware of the existance of ham
radio. If they already know about it, they are either interested in it

or not. If not, it most likely has to do with preconceived notions about ham "attitude" (Stuffed shirts). I make an effort to try to enlighten the person, but if he's set in his ways, I let it drop. If they want more information, I leave the door open and will gladly help if and when they decide that they want to make the plunge. Frankly with the current license requirements, I can't understand why more people don't move to ham radio. It's not that difficult, and there are enough diversity in operators, that almost anyone can find "kindred" spirits on one band or another.

So, what you are saying is that if people didn't talk skip, the band would be more quiet? I guess you just kinda "tell" your RF to hang out locally, and not to propagate globally? Is that the idea? And if Jose down in Belize did the same thing, he wouldn't be a problem here and vice versa? Dave, as you so alluded, you have the wrong band here, period(pipe dreams excluded). 11 meters is an HF band, although not a reliable one, it is one. You can make all the rules you wish, but you cannot rewrite the laws of nature.

Hi Dave,
Well what's a person supposed to do
when skip is running? Stop talking? I
mean, you can say that you respect the
mile limit, but when you talk to your
friend a mile away and your signals
bouncing in several hundreds of miles
away and covering locals there. How
can you prevent "your" signal from
bouncing into another state, stop
talking?
I was driving around with a friend
looking for a new car for him, so we're
going from dealership to dealership, all the
time jabber jawing on the radio with the
locals as we went from city to city looking.
Found out a week later that I was covering
locals in an area in Chicago and they were
all trying to get back to me, but conditions
weren't right for the return trip. Now I was
running at the time just a 100 watt RCI
doing approx. 70 watts, so trying to control
natural conditions is going to be very hard
to do.

I am PRO-Modesty. The Muslim Burqua is OPPRESSIVE and is not for the purpose of "modesty," but OPPRESSES Woman in violation of the New Testament. They think they can HIDE woman behind all the cloth to prevent lust! Boy are they stupid! Most of the Palistinioans I have met ARE Christian or Catholic. I know that there are Muslim ones too; I just never met many of them. I KNOW your religion is Anti-Biblical and Anti-Christ! If www.cultbusters.com is back up again you can learn more of what the Muslims really are!

NO, The early Church written about in the Book of Acts WERE the 1st Christians. The Catholic "harlot" church started @ 325AD when Constantine merged the apostate Chruch with the state. The true church wasn't a part of that. READ the Book of Acts, and then read Revelation 17 & 18. If you go to the Catholic church, which chapter or book best describes what you see in "church?" Catholics are NOT Christians; the Pope was called THE Anti_Christ in the old days. IF you are Catholic, Jesus has a special calling for you in Rev. 17/ 18: GET OUT of that Harlot Church before you get the plagues that HE will put on her!

Points answered below each statement.
Dave
"Tomas Byrnes" <tomb@NOSPAMbyrneit.net> wrote in message
news:Xns91D6CA42E3038tombbyrneitnet@68.6.19.6...
> Hey Dave, during the Crusades, the only "Christians" were Catholic. I

NO, God always had a remnant that weren't catholic but WERE
Christian.

> believe you mean "Protestants" when you say "Christian". I suggest some

The Protestants are the "daughters" of the Harlot catholic church
that the Bible speaks of. You can be Christian and not Protestant either!

> study of the History of Western Civilization is in order.

A study of the King James Bible is in order for you! HIStory is HIS
STORY (Jesus's).

>
> To this day, Catholics are a subset of Christians, whether your bigotry

They are NOT Christians. It has nothing to do with what I SAY or
think--I just read what GOD says about them in the Bible. HIS people will
COME OUT of that Babylonian Harlot "church." She is full of idolatry! She
even violated the 10 commandments by changing them!

> allows you to accept that or not.
>
> Also, if you are blaming Spain, I thinl you mean the Inquisition. The
> Crusades were called by the Pope (who was Italian at the time).

Yep, Catholic. NOT Christian. IF the "harlot church" went by the
Bible, there would of been NO inquisition. God calls the catholic church
THE ABOMINATION of the EARTH! Jesus HATES it! It is not the true Bride of
Christ! It is a Harlot Mystery Babolon religion, that was here BEFORE Jesus
was, since ancient Babylon, where most of your pagan hollidays come from,
like Easter & Christmass!

>
> As for "religion determines law" see the 1st amendment to the US
> constitution for refutation.

No, the 1st Amendment was put in BY CHRISTIANS to protect the
Christian religion from the govt. messing with it. Each countries RELIGION
determines their LAW System. This is fact!

>
> As for the rest of your invective. I suggest re-reading the New Testament.
> It is only for God to judge.

This is what the false "church" teaches. The Church IS suppose to
JUDGE Rightous Judgment. We make judgments on a daily basis, like whether
we should by CB's from RED CHINA. The Bible commands individual Christians
TO JUDGE (read the last 2 Psalms). IT seems that the false "church" has
even brainwashed YOU TOO. Read that King James Bible to get UN-brainwashed!

Hey Chuckeesuckee, why don't you fess up about lying about that CCW permit, you fat, stinky, sweaty, living with mommy, working at Arby's, gross assed hog?

Chuckeesuckee talked with KB8LTT? Why are we not suprised? He is an even MORE grossly fat pig who sits around his house eating snicker bars while his wife works. Chuckeesuckee lives with mommy, so that fits the mold of people who would befriend you as well, chuckeesuckee. KB8LTT got his license by fraud. KF8JL and others of that now defunct VE group passed em out like candy at halloween back in the early 90's. This is a widely known fact.

Several other area hams also did this, so maybe chuckeesuckee did so as well. Tell KB8LTT that we know this to be true.

By the way, chuckeesuckee, your fake domain of iamawuss.com is very appropriate. You are a wuss. You threaten women, kids, and pets from behind a keyboard. You were cold busted for this and lost your access from at&t because of that post. You fat sloppy lying pig.

A lying threatener of women, children, and pets. A fat pig witout a life. A swine living with mommy. That's K8CPA. Don't it suck when the truth smacks you, chuckeesukkee? It is all true and all horrible. What a disgrace to humanity you are, chuckeesukkee.

chimbo , your inference is incorrect.........catholics were not, i
repeat, were not , the first Christians.........you have to ask
yourself, where is it , that the catholic church got started.......I
realize they try to trace their beginnings back to Peter, but that
also is incorrect, and is merely an baseless appropriation , designed
to fool the ignorant masses.....after all, it must be said, that for
centuries , the catholic church would not allow anyone to know exactly
what was in the Bible.........because they didn't want you to
know...because once the unwashed masses, learned that they could

petition the Father, through the Son and do it themselves without the benefit of a priest,.....they would not need the church , as it is called , and its arcain traditions of priestly intervention on behalf of church members , for money of course.....thank you.....thank you very much.....sdj is down.....

4454. Re: Encountered a small problem....

Newsgroup: rec.radio.cb
Date: 2002-03-20 18:34:18 UTC
From: Larry Berta <lberta@isys.ca>
Message-ID: <u9hl9trqnn7ed5@corp.supernews.com>
Source record: 118765

1. The "spring" coil at the bottom of the 21-996 is NOT flexible. This coil is the "loading" coil which allows the physical height of the antenna to be shorter but still physically long enough to be resonant in the CB and 10 meter ham frequencies. The center part of this coil is also another "loading" coil. This coil assembly is NOT flexible.

2. Antenna on the ROOF. One reason for mounting any transmitting antenna on the roof of a vehicle is to protect the occupants within the vehicle from the transmitted RF energy. The 21-996 radiates most of the transmitters RF energy from the coil assembly. If mounted on the trunk the RF energy will travel through the passengers in the vehicle through the rear window. At high power or high frequencies a trunk mount would not be acceptable. Still something to think about at CB frequencies with young children, babies or rear seat passengers. The 21-996 is designed to be mounted on the ROOF. If you require an antenna to be mounted on the trunk I would suggest you find an antenna that has the "loading" coil either in the center or at the top of the antenna. An antenna of this design (center loaded or top loaded) gets the RF energy away from the passenger compartment (above the height of the vehicle roof) and usually will transmit further because of a lower angle of radiation.

3. Some sacrifices are necessary ... DO NOT ENTER THE GARAGE !!

Hope this info is useful to you.
Larry

Point taken. You can't control the fact that your signal is subject to the whims of mother nature. But you CAN control the degree of interference that you create by limiting your power. The interference that you create in other "skip" areas at 4 watts will be proportionally less than what it would be at 100 or 1000 watts.

There's also a big difference between incidental skip interference from a few locals conducting their business, and operators cranking up their "Big radios" and deliberately attempting to shoot skip, much to the casternation of locals all over the globe.

Was 70 watts necessary to talk to the locals?

I don't want to get into the snowball effect of bumping the power to get over the noise, which in turn, raises the noise level, which would then require users to bump the power again, and so it goes.

I've always prefered finding a more quiet channel, rather than trying to power over the noise.

I know this is a CB group but maybe someone out there could provide
some insight here...

My 1997 Ford Explorer pickup truck has developed an RF buzz that has
made AM listening all but impossible unless I
am within sight of the station's tower. Whenever the engine is on, the
pitch of the static buzz increases and
decreases with the acceleration. When the engine is shut off, the buzz
goes away. I'm assuming it is caused by
some component aging because when I first bought the truck it didn't
have this problem. I can't use my CB radio for the same reason.

My question is: what part of the engine and/or electrical system
could be causing that sound? What part should
be replaced? Is there an available patch for the electrical system that
would remedy this problem? Any
information from someone who knows about engine RF would be greatly
appreciated.

I have heard that "stuffed shirts" thing before and I think it's just another lame excuse. The Rain Report is filled with ham violators every month. People like Toll and Jay openly promote lawbreaking. So why would CBers think hams are stuffed shirts?

BarnBuster, Did I say you said my correct name ? No If you learned to read and not make my post into what you want them to say perhaps we will get along better. I asked you how do you know what my name is? Not how do you know my name. This would mean how in the world would you remotely have a clue, idea, thougth of what my name really is. Remember just because you say it doesnt make it so. BTW, what about those posts you qouted from the ARRL, did you bother to read further down the paragraph? Or since I posted the correct info you would just let it slide.

What's a person supposed to do when there is a traffic jam on the main
highway?

(a) Speed up, drive illegally, try to bash the traffic aside
(b) Slow down and wait it out like everyone else
(c) Find a legal alternative route

(By the way, that was an ANALOGY for those like Bert who take
everything lliterally)

Anyhow, I see Landshark has answered his own question - by using
illegal power.

Source record: 118777

I've heard that 9v battery/antenna bit, almost died from laughter.
I also like (and this one is neither new nor isolated in its prevalence) the 'burning a DX path" lunacy, whereby if two stations talk to each other with enough power for a long enough period of time, they can burn a more-or-less permanent path for more reliable comm's. Swear to God, I've heard that, more than once. Kills me every time.
Also, I had a fella bring me a set of headphones to modify, telling me that his CB buddies told him that they needed to be altered, as they weren't the right "megahertz" for CB use. They were regular headphones, worked just fine, and the guy hadn't even TRIED to use them with his CB, since the other fellas "knew what they were talking about". When I plugged them in and had him put them on, he got red-faced and laughed a second, then said "thanks" and walked out the door. Later on Ch. 22 I heard him chewing out his pals, and they STILL insisted they were right!
Amazing.
Linus

yeh you are soooooooooooooooooooo right dave........just look at
their so-called 'priest'.......a bunch of homo fags dressed up in a
dress and a collar, taking confession, using that confession as a way
to blackmail certain parishoners, who it turns out happen to be young
boys....yeh, tell me priest homo boy, how i am a sinner and i need to
confess.............what a pathetic counterfit church, rich in land
holdings and money , running around encouraging countries they are
active in, to be socialist.........well you know, charity starts at
home......all these poor people in those countries, and there they
sit, rich as all get out, and not doing one cotton pickin thing to
help the poor , except a bunch of talking and no walking.....the
entire faith is based upon a lie........and it is fitting that it at
this time in history is failing......name one place where catholics
have been, that is not a fubar situation.............name
one...................sdj, the voice of truth is back
quiet.......world wide voice of truth texas radio broadcasting the
truth to the truth starved multitudes on channel 6 , 27.025
mghz......daily, via 2 6000a7 finals........no doubt about
it...............

> That's all fine and dandy, but where did I ask you to cite a
> reference?

Did I say you asked me to cite a reference, thats your MO ask people to cite what they claim

>Hell, all someone needs to do is look up ERP in their rat-shack electronics dictionary to see that it is antenna input power times antenna gain.

Then why did you say this

"You forgot about reflected power (if any), the radiation efficiency of the antenna (which is not the same as antenna gain), RF radiation losses from the coax (caused by mismatch, direct induction, or containment failure points), and insertion loss from connectors and other devices (including any choke that might be used on the coax). Then consideration needs to be given for any nearby objects, natural or artificial, that might absorb, reflect or refract the signal. There are also ground losses, HAAT, polarization,.... "

If it is only antenna input power x gain. why all the above? I posted almost the exact same definition and you replied with the above Whats up with that?

>So why were you so insistant that Sideband was too incompetent to figure that out for himself?

He couldnt comprehend that I gave him the gain figure already, and if ERP is antenna input power times antenna gain. He had enough info to accuratly answer the question. If he would have said 1 watt at the antenna input this thread would have been over long ago. He is an Extra Class Ham if he cannot figure that out tell him to give his license back the almost same exact question was asked on his exam a few months back, I am still wondering if he asked the FCC examiner how high was the antenna off ground and what the F/b ratio was of the antenna they specified in that question. What do you think ?

> And after I re-read the thread, I see that all he did was ask a simple, civilized question and you jump his shit with "Holy Shit, a rocket scientist" and whine that
> your question was meant for Tim, totally ignoring that he wasn't even answering your question. It looks like all you wanted to do was argue. What's up with >that?

Sparky If you call me telling him the question was for Tim whining, Ill have to dig up your post with Toll Free and Moparholic and I will show you just how you whine. By you jumping into the thread it looks like all you wanted to do was argue Frank. After all you said what I said was all basically true why did you feel the need to correct me the contradicte the statement that you tried to correct me with. Whats up with Dat?

Replace the cap, rotor and point/condensor stuff. It may also be
a bad wire or broken/gunked spark plug.

This would be a good time to check your emission hoses for
blockages and cracks, clean the EGR passages and replace
the air/fuel/PVC and smog pump filters.

Regular tune-ups and maintenance prevent this from occurring.

Yeah that told me a lot....like everything I need to fucking do is WRONG....

Here's how it goes:
A)I want it on the trunk because its not quite AS bad looking as it is on the roof.....if I was driving a truck like half of you people I could totally do it differently.

B) No one rides in the backseat and even if they were I could give a shit about exposing them to RF waves.

I'm going to take this pos antenna back tonight....since it doesn't sound like the parking garage is going to be antenna friendly, I'm going to try n find a metal antenna, with at least a mid-antenna coil that is long but not insane long like the 4' one. I realize this will diminish my transmitting power, even after I calibrate it, if need be but to be honest I'm tired of fucking with it. If I lived out among the corn fields and only had to drive from home to the mill and back again I'd buy a fuckin 8' antenna but that isn't how it is. I'll do my best.

PS...I wont be mounting it on the ROOF....(don't have to capitalize that ya know)

I just visited the site at www.members.shaw.ca/SWARL and found out all about SWL'ing the Ham Bands. As well, they offer a registry for SWL Call Signs and issue SWL Call Signs to those who do not have one already.

So, if you dont have a registered SWL call, visit their site. The call sign is free and the certificate is sent as a jpg file so you can print it out locally on your printer. They will also send out a hard copy of it if you wish.

Check them out.

www.members.shaw.ca/SWARL

Regards,
Steve

Sorry you have developed a bad attitude about all of this. Your problems only point out that CB radio was never designed to be a hobby frequency. With 4 watts output at 27 MHz, you only have to be less than 2 feet away from the radiating antenna to be safe, but you need to do a little reading about RF exposure. Not caring about who is exposed could result in you or your family member being blinded from mishandling. Remember that your first antenna didn't work because it was too short, and remember that you are working in a frequency band that is 11 meters long. Eleven meters. About 36 feet. Understand? Anything shorter than 36 feet is a compromise, and most guys can live with what you bought the second time. It is short but has a loading coil at the base to increase its overall electrical length. 4 watts isn't a problem on the trunk lid. Perhaps you should reconsider the whole project and choose to forgo CB.

Gains are usually stated for the antenna in free space - so ground effects
do not apply.

This is the only way you can directly compare antennas for maximum gain
in any reasonable manner.

The rf engineer knows that the vertical pattern varies with height above
ground - and makes allowance for that variation.

How does that help? The tuner does not change the coax or antenna impedance - so does not do much for you when placed between the tuner and the antenna.

What the tuner does is match the radio/amplifier to the input impedance of the coax. So the meter goes between the radio/amplifier and the tuner. Tune for minimum VSWR.

It could also be an alternator/generator problem. Another possibility
is that the noise suppression circuitry in the radio has gone bad.

What a rip off this must be! Call signs for listening? Now big brother wants to know WHO is listening! How much are they? No one would think of nonsence such as this when I listened to SWL back in 1970!
Dave!!!!!!!!!!!!!!!!

Even more reasonable would be to take ALL factors into account.
Isn't that why we have the term ERP to begin with. Don't TV
broadcasters publish their ERP? Doesn't the FCC have rules regarding
how this ERP is measured. Aren't these measurements the result of ALL
factors?

>Gains are usually stated for the antenna in free space - so ground effects
>do not apply.

The ground is an intregal part of any antenna. Go check out your
nearby AM broadcast tower, complete with ground radials. There is no
"free space" gain figure for one of those. Even the fence around the
site becomes a factor of antenna gain. When determining ERP, the
antenna gain is considered "as installed", not "in free space".

>This is the only way you can directly compare antennas for maximum gain
>in any reasonable manner.

True, but you are not comparing antennas, you are determining ERP for
a given station.

>The rf engineer knows that the vertical pattern varies with height above
>ground - and makes allowance for that variation.

There is no "allowance". ERP is measured, not estimated using
allowances.

If you'd bothered to READ the post, he said there was no charge for the
'service'.
If the company sends copies of its files to the Feds for THEIR files, I'd be
amazed. And it wouldn't matter when they've already got so much info at their
disposal as it is.
Third, such SWL callsigns were certainly being issued even before YOU were
listening in the '70's... even in the '50's, with magazines and other entities
creating 'monitoring callsigns', and so on. And it was surely happening in the
glorious '70's...
Think before you drool, Dave.

Agree Dave, you can limit the amount
of S units, but you can with proper conditions
due the same amount of damage with only four
watts. I was talking with my cousin in Texas
on the phone when skip was rolling in from there.
He turned on his radio and I had my base on, well
he runs only four watts, my base only goes as high
as 10 watts and he was stepping on people that
were only 2 miles away from me, so when conditions
are right even four watts can create mass amounts
of interference too.
As for me running the 70 watts, a 2970 has a
variable, so if 8 watts wasn't enough I can turn it
up as far as was needed until it was up all the way
which wasn't always necessary.

The jumbo jet is just coming into an Airport in Toronto on its final approach. The pilot comes on over the intercom. "This is Capt. Johnson. We're on our final descent into Toronto. I want to thank you for flying with us today, and I hope you enjoy your stay in Toronto.

He forgets to switch off the intercom. The whole plane can now hear the conversation from the cockpit. The co-pilot says to the pilot, "Well skipper, watcha gonna do in Toronto?

"Well," says the skipper, "first I'm gonna check into the hotel and take a crap. Then I'm gonna take that new stewardess out for supper, you know, the one with the huge breasts. I'm gonna wine and dine her, take her back to my room, and shag her all night."

Everyone in the plane is trying to get a look at the new stewardess.

She's so embarrassed that she runs from the back of the plane to try and get to the cockpit to turn the intercom off. Halfway down the aisle, she trips over an old lady's bag and down she goes.

The old lady leans over and says, "No need to run, dear, he's gotta take a crap first!"

Amateur Radio Newsline Report 1283 – March 15, 2002

Amateur Radio Newsline report number 1283 with a release date of Friday, March 15th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Restructuring at the FCC should not impact on Amateur Radio and a first for the Dayton Hamvention. These stories are first on Amateur Radio Newsline report number 1283 coming your way right now.

(Billboard Cart Here)

REGULATORY ISSUES : FCC REORGANIZES LATER THIS MONTH

A reorganization of the Federal Communications Commission is set to become final later this month. This, as the agency stresses that realignment of responsibilities between various bureaus will make it more efficient and help it better respond to a changing technological marketplace. Amateur Radio Newsline's David Black, KB4KCH, takes a look at some of the changes.

--
It's an independent government agency that reports directly to Congress. It's mission is to regulate communications. One of the services it oversees is Amateur Radio, but most observers of the reorganization of the Federal Communications Commission see little impact on hobby communications.

As part of the reorganization a new Media Bureau will combine the duties of the current Cable and Mass Media bureaus. The goal of the combined bureau? To treat competitors of multiple entertainment delivery systems equally and consistently. This includes broadcasters, cable operators and satellite service providers to name only a few.

Other changes include a renamed Consumer and Governmental Affairs Bureau. Also, a realigned International Bureau still will handle satellite licensing but most policy issues will now be the domain of the newly created Media Bureau.

These are just a few of many changes taking place. Most appear aimed at commercial interests. For ham radio, C-B, G-M-R-S and most two-way radio users the shift will probably be transparent. In other words, for these spectrum users and most others, it looks like business as usual within a soon to be restructured FCC.

From the South-East Bureau in Birmingham Alabama, I'm David Black, KB4KCH, reporting for the Amateur Radio Newsline. Don.

--

Congress endorsed the plan late last year. The FCC then approved the overhaul in January. The changes will take effect March 25th. You can read more on the web at www.fcc.gov. (ARNewsline (tm) from published news reports)

**

RADIO LAW: FCC REFUSES TO SIDE WITH CB'ER IN LOCAL CITATION CASE

The FCC has refused to hear an appeal by an Illinois C-B operator who was convicted of Disorderly Conduct for using an 11 meter Class D Citizens Band Radio. Amateur Radio Newsline's Norm Seeley, KI7UP, has the details:

--
Gary D. White is among the first C-B operators dinged under a new authority granted by the Federal Government to states and municipal law enforcement agencies. Authority to control interference caused by operators of Class D 11 Meter C-B radio sets.

White was convicted on a state Disorderly Conduct charge of operating his C-B equipment in an unreasonably loud, offensive, harassing or threatening manner. He was not convicted of violating any FCC rules. White believed that the citation was based on interference to a neighbors telephone and television receiver. This in itself is not a violation of FCC Part 95 rules. And because of this he also believed that local authorities had no justification to sanction him. So he appealed the conviction to the FCC.

But the FCC says that the proof of guilt on the Disorderly conduct allegation is not in its preview to consider. This is because no FCC rules were violated. Also, under a law enacted by Congress in November of 2000, state and local governments are free to enact laws to enforce existing Part 95 Citizens Radio Service rules.

Bottom line. The FCC will not interfere in the case and White will have to find other avenues if he wishes to continue his appeals.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

Congress enacted the law to give state and local authorities enforcement authority over 11 meter C-B operators due to the rising tide of unnecessary and harmful interference to other people using radio devices in near-by spectrum. This includes corded and wireless telephones, television receivers, stereo Hi-Fi sets and other consumer electronic gear. Ham radio is specifically exempted from the law and any ordinance it may be used to create. (W5YI Report)

**

HAM RADIO RIGHTS: NM. AND W.VA. JOIN THE PRB-1 BANDWAGON

The ARRL Letter reports that New Mexico and West Virginia have become the 14th and 15th states to adopt pro Amateur Radio antenna bills based on the limited

federal preemption known as PRB-1. Amateur Radio Newsline’s Jeff Clark, K8JAC, reports:

We have this report:

--
In New Mexico Governor Gary Johnson signed House Bill 314 on March 5th. This, after it easily passed both houses of the legislature last month with just two opposing votes during a short session that typically only deals with appropriations bills. Called New Mexico's "Emergency Communication Preservation Act" the measure was sponsored by State Representative Mimi Stewart and Senator Ramsay Gorham. It stipulates that municipal or county ordinances regulating Amateur Radio antennas cannot obstruct or preclude amateur radio service communications. Also, that such ordinances shall reasonably accommodate amateur radio service communications.

Here in West Virginia Governor Bob Wise signed House Bill 4335 into law on March 7th. The bill provides that antenna structures may be erected at heights and dimensions sufficient to accommodate amateur radio service communications but does not include a minimum regulatory height schedule. The measure also exempts Amateur Radio antenna towers constructed prior to the effective date from subsequent zoning regulation changes.

From Charleston West Virginia, I’m Jeff Clark, K8JAC.

--

In signing the West Virginia bill into law, Governor Wise, whose late father held the call sign W-A-8-A-Y-P, also proclaimed March 7 as Amateur Radio Operators Appreciation Day across the state. (ARRL)

AMERICA AT WAR: NEW TERRORISM ALERT SYSTEM

The United States has a new color-coded terrorism warning system. It was revealed on Tuesday, March 12th by Homeland Security chief Tom Ridge.

The five-level system is a response to public complaints that broad terror alerts issued by the government since the Sept. 11 attacks raised alarm without providing useful guidance. The lowest-status warning is green, followed by blue, yellow, orange and red as the perceived dangers intensify.

As the terrorism warning system was unveiled, Ridge said that the nation is on yellow alert. This means that the United States is facing a significant risk

of danger but not the highest stage.

The alert system is in force immediately for federal agencies, and Ridge is urging state and local governments to adopt it, too. It will be subject to a 45-day comment period, after which it probably will be revised. It’s not known what part if any Amateur Radio will play in the new enhanced terrorism alert scheme. (Published news reports)

**

ENFORCEMENT: TAKE THAT UNCOORDINATED REPEATER OFF THE AIR

The FCC has told the operator of an uncoordinated North Carolina repeater to stop interfering with a coordinated machine, even if it means immediately taking his system off the air. This is the edict handed down to the operators of the NY4X repeater by FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth, K4ZDH.

--
Hollingsworth: “ We also notified Richard Howell, NY4X, of Greer South Carolina and John Parker, AG4AZ, of Brevard Norrth Carolina that upon reciept of the letter, the NY4X repeater that they operate had to either shut down, obtain coordination or submit a detailed plan to the Commission to prevent interference to the KU4OL [repeater].”

“Now this interference has been going on for quite some time. We notified Parker and Howell back in November that something had to be done. Nothing was accomplished in regard to coordination and nothing was done in regard to the interference.”
--

Hollingsworth letter says that Howell and Parker had more than ample time to fulfill their obligation under Section 97.205 of the Commission’s rules. And late word is that the repeater has been shut down. (FCC, RAIN)

**

ENFORCEMENT: TAKE THAT BROKEN REPEATER OFF THE AIR

The NY4X repeater is not the only machine currently under FCC scrutiny. Another one is in Northern California. This one is having technical problems and is causing interference to machines on adjacent channel pairs. Again, the FCC’s Riley Hollingsworth, K4ZDH:

--
Hollingsworth: “We notified Wendall Peterson of Walnut Creek California, operator of the K6POU repeater that more than enough time has elapsed for him to correct the technical and control problems with the repeater. His earlier response to our inquiry showed that the bandwidth was indeed so wide that it caused problems to two other repeaters. We have gotten complaints about that. And the repeater system is just not operating in accordance with good Amateur practice.”
--

Hollingsworth says that his office expects the problems with the repeater to be corrected or that the machine will be taken off the air. He also gave Peterson 20 days from the date of his letter to respond. (FCC, RAIN)

**

ENFORCEMENT: THE RESPONSIBILITY OF REPEATER OWNERS

The FCC enforcement involving the NY4X and K-6POU repeaters are just the latest in a series of actions aimed at cleaning up the problems that have been plaguing the F-M community. Whether it's an uncoordinated repeater causing havoc to a coordinated machine, or a long established system in need of maintenance, the FCC's Hollingsworth says responsibility comes with repeater ownership:

--
Hollingsworth: "We want to emphasize that repeaters are voluntary. Nobody has to put one up. But if you do put one up you have a responsibility to maintain it, to get coordination if that's necessary, and to operate in accordance with good Amateur practices, especially if other repeaters are being detrimentally affected."
--

In reality, the only things the FCC is asking of those who own and operate repeaters is to be good neighbors and to adhere to the proper technical standards. In this way, the repeaters themselves can better serve their service area and the ham radio community in it. (FCC, RAIN)

**

RESCUE RADIO: KNOWING WHERE YOU ARE IN THE MID WEST

If you drive the highways and by-ways of Kentucky, you need never worry again about where you are. And if you get in a bind, rescuers will be able to find you. That is, if you are a ham radio operator equipped with a mobile APRS station. Jack Parker, W8ISH, of Amateur News Weekly, says that in his part of the world it is a mode that is truly coming of age:

--
Good news from the Kentuckey Automatic Position Reporting Society" their network of APRS digipeters is growing like well bred Kentucky Race Horses.

According to Brian Walker, KC4FIE, several new sites will be coming on line very soon. New digi's are planned for Grand Rivers, Morgantown, Owensboro, Lawrenceburg, and Dry Ridge to name a few.

The Murry State University club has added a digipeter and two stations along the Kentuckey – Tennessee border have extended APRS coverage into that state. These efforts effective extend the Mid-West network of APRS digipeters established by the Tri-State Working Group in Ohio, Indiana and Illinois.

If you need more information on the Automatic Position Reporting System just check the APRS Working Group website at www.tawg.org.

Reporting for Amateur News Weekly, this is Jack Parker, W8ISH.

--

With interest in A-P-R-S growing and ham gear that includes the mode as a standard feature, look for a defacto nationwide network to be in place by the end of the decade. (ANW)

**

HAMVENTION 2002: HAM TESTS WILL BE AT THE HARA

The Dayton Hamvention has asked that we pass along a correction to some information in its recently mailed pre-show brochure. The pamphlet incorrectly lists Meadowdale High School as the venue for Amateur Radio license exams. This is incorrect. The Hamvention says that all license exams will be held at the HARA Arena Hamvention site. (Hamvention(r))

**

HAMVENTION 2002: QCWA BANQUET

And attention QCWA members. This years annual banquet in conjunction with the Dayton Hamvention will be hosted by the South West Ohio chapter and will be held on Friday, May 17th. The venue is Alex's Continental Restaurant near Miamisburg. Starting time is 7:30 P.M. and reservations are required.

This years speaker will be General Raymond Moorman. He will be talking about the United States Air Force Museum and plans for the upcoming Centennial of Flight celebration in 2003. For more information and to make reservations please contact Ed Sonnanstine by e-mail to EdSonny@aol.com (QCWA)

**

CONVENTIONS - UTAH: UTAH HAMFEST

The 2002 Rocky Mountain Division ARRL Convention and 2002 Utah Hamfest will be held July 12th to the 14th at Ruby's Inn at Bryce, Utah. The venue is near Bryce Canyon National Park. For more information please visit www.utahhamfest.org on the world wide web. (Utah Hamfest)

**

CONFERENCES: ARRL/TAPR DIGITAL COMMUNICATIONS CONFERENCE

Technical papers are being solicited for presentation at the 21st Annual ARRL and TAPR Digital Communications Conference. The event will be held this September in Denver, Colorado. Presentations will also be publicized in the Conference Proceedings. Submission of papers is due by August 5th and in-person presentation at the conference is not required for publication. Conference registration and additional details are available on the web at www.tapr.org/dcc (TAPR, ARRL)

NAMES IN THE NEWS: HELPING HAND NET

We want to take a moment to welcome a new and very interesting net to the Amateur Radio Newsline family. It is on the AD6XK repeater here in Los Angeles California on 145.440 MHz.

What makes this net very special is that its Control Operator Simon Rosconi, K6DXN, is visually impaired. According to Dave Estrada, KD6HDX, Rosconi lost his vision at age 6. Estrada says that even without sight, Rosconi works 40 hours a week, and still finds time to volunteer his time as control operator for the nets.

But Rosconi is not the only vision impaired ham involved. Estrada tells Amateur Radio Newsline that Brian Coponiti, KG6BVO, who is also partially blind, has also volunteered. Coponiti downloads and plays back Amateur Radio Newsline to the net.

Estrada adds that this particular repeater group also has two other operators that are visually impaired. They are Gary La Duke, WB6WJW and Ivan Simer, K6TTA. (KD6HDX)

**

NAMES IN THE NEWS: EDWARD T. CLEGG, W8LOY FAMILY CELEBRATION

A few weeks ago we told you about plans by the family of the late Edward T. Clegg, W8LOY, to celebrate the life of this ham radio pioneer. The gathering is being planned by Ed’s widow Martie, her daughter Linda and Linda’s husband Rob Mc Guffie, K2HZN. Recently, RAIN producer Hap Holly, KC9RP, had a chance to speak with Rob about the upcoming event:

--
NO TEXT AVAILABLE – AUDIO ONLY
--

Hap conducted an extensive interview with Rob Mc Guffie. It really tells the whole story of Ed Clegg and his famed Clegg Labs. Part 1 is online right now at www.rainreport.com or by telephone at 847-827-7246. (RAIN)

**

RADIO REGULATIONS: AVOIDING A PHONE NUMBER CRUNCH

The nation's supply of telephone phone numbers is depleting rapidly and the government is taking steps to make sure what is left lasts longer. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has more:

--
Over the past several years, area codes have multiplied to cope with the

explosion in technology. Regions have responded by splitting up area codes among geographic areas or laying another area code over an existing one.

But in 1996 the Federal Communications Commission banned such overlays dedicated to specific kinds of technology. The Commission enacted the ban because it considered separate area codes for cellular telephones phones and pagers unfair to wireless companies and their customers. This is because everyone would have to dial 10 digits instead of seven to reach wireless customers.

But states including California, Massachusetts and Ohio had been been asking for ways to prevent existing area codes from running out of phone numbers, the agency said. The FCC says that it will now hear proposals from states on how they intend to conserve area codes on a case-by-case basis, including plans to use technology-specific area codes.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, in West Orange New Jersey.

--

The FCC, which is responsible for overseeing the supply of phone numbers, says that without action the number pool will run out in less than ten years. (FCC)

**

HAM RADIO BUSINESS: A NEW HOME FOR VERTEX STANDARD/YAESU

Vertex Standard USA, better known in ham radio circles as Yaesu, is moving to a huge, beautiful new facility. The new address is Vertex Standard U-S-A, 10900 Walker Street, Cypress, California, 90630. The new main phone number is area code 714-827-7600. All e-mail addresses will remain the same but telephone extensions will change. Vertex Standard makes the move -- no joke -- on Monday, April 1st. (Vertex-Standard)

**

INTERNATIONAL-CANADA: VE7BFK IS NEW RAC ARDF COORDINATOR

Radio Amateurs of Canada has named Gordon Young, VE7BFK as it's news R-A-C National Amateur Radio Direction Finding Coordinator. Young replaces Perry Creighton, VA7PC who held that appointment for the past several years. (RAC)

**

CONTESTS: SOUTH WEST OKLAHOMA SPRINTS

The first ever South West Oklahoma Spring Sprints sponsored by the Lawton VHF Contesting Club will take place in just a few weeks. Sprints are short period contests held primarily on a specific band or using a specific mode. The South West Oklahoma Spring Sprints are band exclusive. The 2 meter sprint is on April 1st from 7 pm to 11 p.m. Central U-S time. The 70 centimeter sprint is April 13th also from 7 to 11 Central. Both are open to all Oklahoma hams living south of Interstate highway 40 and West of Interstate 35. For more

information e-mail ne0p@arrl.net (VHF Reflector)

**

DX

In DX, K8PT and K3PLV are in the Channel Islands and operating as MJ slash K8PT and MJ slash K3PLV from Jersey through the 19th of March. The emphasis is on CW and RTTY in the WARC bands during daylight and 30, 40 and 80 meters during the evenings. Q-S-L as directed on the air. (RSGB)

Also word that Laurence Howell, GM4DMA, who is now resident in Anchorage, Alaska, will be travelling to warmer climates. This, as part of his work for the youth development charity Raleigh International. Howell say that he plans to be active as V51 slash G4DMA from Namibia from the 16th of March for two weeks. Look for him on 160 through 6 meters as his work schedule allows. (RSGB)

**
THAT FINAL ITEM: A WEDDING AT HAMVENTION 2002

And finally this week, get ready for a first. The first ever wedding to be held at the Dayton Hamvention.

No, we are not kidding. For the first time in Hamvention history, wedding vows will be exchanged at the show. This as Cyndi Krieger and Mark Elliot, N8WZW, will be married Saturday, May 18th at the HARA Arena during Hamvention 2002.

Mark and Cyndi met about thirteen years ago through a mutual friend. On their first date Mark and Cyndi went out for dinner and a movie. According to Hamvention sources, they have been an "item" ever since.

Mark introduced Cyndi to amateur radio by going to a hamfest. Cyndi had no idea what a hamfest was, but it sounded interesting. It was and she was hooked! Cyndi is now studying for her license and may test for it before Hamvention weekend.

Why get married at Hamvention? Mark and Cyndi couldn't think of a better place to share their love for each other and for amateur radio than by getting married at the world's largest amateur radio trade show. The ceremony takes place at 3 PM in Forum Room 3 immediately following the Amateur Radio Newsline produced Ham Radio Town Meeting. (Hamvention (r))

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the Dayton Hamvention, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,

Arcadia, California 91066.

Before we go, a reminder that the nominating period for the 2002 amateur Radio Newsline Young Ham of the Year is now open. No significant changes from last year. Nominees must be 18 or younger. Full rules and an application is on our website at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, KC5MFA saying 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

> factors?

No. ERP is only meant to determine the maximum power that can be radiated by the antenna. It is not meant to be used to determine the power density at any given distance from the antenna.

Yes, the broadcasters publish their ERP - at least, the ones allowed the higher ERP figures do so - they like to brag about it.

Yes, the FCC specifies how ERP is measured. As I stated, there are two factors - the power into the antenna and the published (manufacturer's) maximum gain figure.

They wouldn't. ALL SWL listener "callsigns" are unofficial. You can just as
easily make up your own. There are a few restrictions, in the US, such as
not starting with A, W, K, N etc.

There were two.

1) 28-30Mhz - 10 meter ham band, even in the UK.
2)"Transmits but does not receive" - describes keyclown mode of operation.

>

The "Stuffed Shirt" label is a throwback to the earlier days of ham radio, when most hams were techno-geeks, who also were believers of a strict (almost to a fault), adherence to the letter of the law. I remember listening to a 2 meter repeater converstation back in the 70's, where one ham was giving another ham a chewing out for him having a police scanner active in the background. In his view, the incidental retransmissions of the background scanner, were a violation of the law. Technically he was correct, but the thing he didn't seem to account for was the difference between intentional and incidental. Some people only see the wording of the law, and have no idea of circumstantial mitigation.

There were a lot of hams like that who would pop up out of the woodwork to remind you that you didn't identify when you should, or you were doing this wrong or that wrong. Around here we call them "Kilocycle Kops". But the stigma of this type of behavior turned many prospective hams away from the hobby. Some of these old timers are still active today, despite the general relaxation of the rules.

Dave

More than likely by a MoPar who will then withdraw to the dealer for the
87th recall and repair of some totally bizarre problem.

Dick N�BK, Mopar Owner but not lover.

Sorry Mopar, This arguement is not scripted, are you saying Frank doesn't
whine?

The thread started as a CB thread, but Bill is 100% correct especially when
he says
"No. ERP is only meant to determine the maximum power that can be radiated
by the antenna. It is not meant to be used to determine the power density at
any given distance from the antenna." Sparky or anyone else has yet to
provide any evidence to the contrary. Don't ask Sparky to provide a link, he
posts all of part 73 with nothing related to what he claims to be true.

>Tune for minimum VSWR.

I have my radios set up radio-amp-tuner-meter-antenna. If you have the meter between the amp and the tuner, you are getting the untuned reading (unless you are looking at reflected power). Placing the meter after the tuner allows you to adjust the SWR after the amp and show the correct output power and SWR.

Sorry George he isn't 100% correct. ERP is NOT only measured and
plotted for the maximum power that can be radiated by the antenna.
TV, FM and Cell sites control their ERP in different directions.
Based on how close they are to an adjecent transmitter they will
change their radiation patterns. That is if a TV transmitter in one
city thats on channel 9 is close to a TV transmitter thats on channel
10 they will "protect" each other.

Dick:

MOPAR = More Overpriced Parts Are Required...

Although my '91 Dynasty was pretty much trouble free until about 196K Miles, when the windshield wiper motor stripped a gear. Oh, and around 140K miles the steering rack locked up, leaving the car without power steering... Some tranny fluid in the power steering pump for about 10K miles fixed that.

It's all in good fun.

97 fords do not have points/condensors,also the noise changes with engine RPM's rule out the electric fuel pump, EFP's are on or off, and run at 1 speed only so the noise will not change, maybe a bad rotor/cap/ wires,most likely the alternator,mine screams static (F150) and even worst with the wipers on, did all the ground straps,tune ups etc, just plain noisey
also checking pcv/ hoses & emissions dont make noise

I went with the 21-989.....it was tunable, not QUITE as long, and no coil.....go to radioshack.com and enter that in the search.

Like I said, no coil, TUNABLE and it'll clear the garage just BARELY...as best as I can measure........

It IS on the trunk...but I should have mentioned that I'll actually be transmitting about 5-10% max total time of the CB being on to begin with.....if that.

Here are my new swr readings:

CHANNEL READING
------------ -----------
1 1:1
10 >1:1
19 1:1.5
30 1:1.5
40 1:1.7

Now to me, that's not half bad and I can live with it....of course that's doing a test here at home...I expect those may go up as I get into a place with more activity, but still...my best readings yet.

Now am I still "endangering" myself with this particular antenna and where it is placed?
You guys were talking about trunk lip mounts...what would be the difference in doing it that way with the whole safety issue???

NO it isn't the Alt., but fuel pumps in the tank are the NOISYEST junk ford ever made. IF the problem is on the CB too, I would say that the fuel pump IS the probelm. If not, it probably is the AM/FM antenna making noise on AM.
Dave!!!!!!!!!!!!!!!!!!!!!!

There is little, if any, danger of RF exposure under 1000 watts from HF wavelengths. You're not endangering yourself having it on the trunk at all. THe only difference will be that you will be directional towards the front of the car, which will put most of your signal forward on the vehicle, and you won't "get out" or hear as well behind you.

Sounds like the antenna is still slightly too long, but the SWR readings you provided aren't bad at all. Your transmitter won't hate your for a 1.7:1 match.

Were the measurements taken inside the garage or out in the driveway? Was there anything metal nearby (within abt 25 feet)?

You might want to recheck your measurements and make your adjustments out in a large parkinglot, when there aren't many cars around... Again, make sure your door is closed and you are inside the vehicle, with noone standing by, near, or on the vehicle.

So I got the new antenna hooked up, went in, had some lunch before I was gonna run some errands....got in the car, could hear people on 19 loud and clear (which I felt was a good sign)....someone was talking about Cincinnati, so of course I charmed in....pressed the key, said what I had to say..and when I let go I noticed no one was talking back.....looked down....CB has no power....everything else in-dash on the car still did......now when I switched these antennas out, I didnt TOUCH the power or anything....a friend of mine (who knows what he's doing) hardwired it up for me......in fact I didnt even touch the unit because the SWR was still hooked up so I temporarily just screwed the antenna into THAT.....

Now....just by transmitting w/ this new antenna...could I have blown something or is it possible that it's just a coincidence that the power came undone? I looked at the wire...looked like it was slacking a little from its hiding place.......

Could this new antenna really have "blown" something in my CB?

Then why is it that 90% of the noise problems you read about on radio groups involve
Fords, and, not only that, it has been that way since the 1950s? Some of the absolute
WORST noise problems I have ever encountered were Fords. In the 60s, when AM
radio was more prevalent (FM broadcast still wasn't offered in cars but rarely), we used
to be in the house listening to the radio when a small bzzzzzzzzzzz would appear in the
receiver, rise until it blanked out the receiver, and then fade away. One of us would remark, "There goes a Ford". And you could look out the window to see a Ford passing by the house! Today, most of the noise troubles involve Ford fuel pumps so that Ford even
has a tech. bulletin about it. Today, I can be at a stop light, hear a buzz on my HF rig, look
around and spot the, yes, F O R D that is causing it. My '93 Lumina @90,000 miles is
as quiet as a mouse, and BTW, I have one of those "sucky" Chevrolets that stopped running. Never did understand why since it only had 199,468 miles on it!! Actually, I DO
know why! A spark plug lost an electrode down in #1 cylinder and scored the cylinder.
Not the car's fault. I bought that car new in 1987 and drove it until Dec. 2000 when that
happened. It will still run, but it skips and bypasses oil. It is an '87 Celebrity wagon I bought
brand new. It's engine was NEVER touched except for routine maintenance. I replaced the
ORIGINAL starter and water pump AFTER 160,000 miles. The tranny never had a wrench on it except to change the fluid and filters. I plan to replace the engine and keep using that old wagon. And BTW, the only vehicle that repeatedly left me stranded was a
FORD! Now, IMHO, THAT is what sucks! Hehe! Ford has a special meaning to me:
I can spell it backwards. D R O F = D river R eturning On F oot. When I had one, I had PLENTY OF practice and strong legs. Been driving GM ever since (1973) and never have
regretted any Chevy or Buick I ever owned.

Axl,
Sounds like you've got it 'wupped'! The
RF exposure thing is more of a 'mind' game
than an actual danger, at least in your
situation, don't worry about it. Also, I'd
leave the antenna alone. Nothing wrong with
those readings.
'Doc

Axl,
I think I'd take a good look at the power lead
to see if I could tell ~why~ it came loose. If the
fuse isn't blown, maybe it just came loose. If the
fuse was blown, then trace it down to see is you can
tell why. Replace the fuse and try again. If the
fuse blows, theres a problems somewhere. Having the
SWR meter in-line shouldn't have had any affect on
the signal, or loosing power.
'Doc

4555. Keyclown appeals to FCC....& LOSES

Newsgroup: rec.radio.cb
Date: 2002-03-21 22:04:37 UTC
From: voobner@yahoo.com
Message-ID: <fbc7a2.0203211404.24375544@posting.google.com>
Source record: 118868

(AR Newsline, Mar 15)

RADIO LAW: FCC REFUSES TO SIDE WITH CBER IN LOCAL CITATION CASE

The FCC has refused to hear an appeal by an Illinois C-B operator who was convicted of Disorderly Conduct for using an 11 meter Class D Citizens Band Radio.

Gary D. White is among the first C-B operators dinged under a new authority granted by the Federal Government to states and municipal law enforcement agencies. Authority to control interference caused by operators of Class D 11 Meter C-B radio sets.

White was convicted on a state Disorderly Conduct charge of operating his C-B equipment in an unreasonably loud, offensive, harassing or threatening manner. He was not convicted of violating any FCC rules. White believed that the citation was based on interference to a neighbors telephone and television receiver. This in itself is not a violation of FCC Part 95 rules. And because of this he also believed that local authorities had no justification to sanction him. So he appealed the conviction to the FCC.

But the FCC says that the proof of guilt on the Disorderly conduct allegation is not in its purview to consider. This is because no FCC rules were violated. Also, under a law enacted by Congress in November of 2000, state and local governments are free to enact laws to enforce existing Part 95 Citizens Radio Service rules.

Bottom line. The FCC will not interfere in the case and White will have to find other avenues if he wishes to continue his appeals.

--
Congress enacted the law to give state and local authorities enforcement authority over 11 meter C-B operators due to the rising tide of unnecessary and harmful interference to other people using radio devices in near-by spectrum. This includes corded and wireless telephones, television receivers, stereo Hi-Fi sets and other consumer electronic gear. Ham radio is specifically exempted from the law and any ordinance it may be used to create.

Ok, here's the update...the fuse DID blow.....and it happened after hooking up this new antenna...but it's labeled as a 27 mhz antenna....plus I really didnt think antenna could have much to do with power surges...can they?

So, I went to the shack..bought fuses.went right to the car and blew 2 straight in a row, note only the car power was on but not the engine .so then I thought maybe somehow the antenna WAS causing it..so they let me switch out that antenna in case it was bad.got the same model just a new one..hooked it up.turned on the power (only), turned on the CB..it stayed on..so I thought all was good..as soon as I started the engine.boom.blown fuse.

Now, granted this all started with getting this antenna but I've never heard of a coax antenna blowing power. That fuse sits on the power feed line.so in theory, if the battery was pumping too much juice to the CB the fuse blows to protect the CB unit correct? So I'm kinda leaning towards something w/ the wiring to the battery.what do u think?

I realize it was strange that once the new antenna was hooked up it seemed ok when only the car power was on.BUT, when I tested it with my SWR meter, it was so low I couldn't even calibrate it! It was really bizarre but then again brings me back to the conclusion that something may be wrong with the whole power thing.

I wont have the chance to get the hardwiring check for another day or 2 since I dont know what the hell I'm doing under there and that's the first chance I can get it to my friend's house. BUT from this info does it sound like that power wire slipped and may be shorting with another???

Seems to me about the only way to provide a ERP figure is to go out

and measure it at different elevation angles.
I suppose there is a computed "assumed" figure for a broadcast tower
but I bet it would take inputting a large number of variables just to
get in the ball park.

He also never said he was going to use it on 11 meters, and he did state that it was an unmodified model(28-30Mhz). Even though it may be OT in this NG(a little), why would you insinuate as you did. Damn, almost forgot who I was talking to here. Forget it.

Placing the meter after the tuner serves no purpose. You are reading forward power plus reflected power combined, not to mention the fact that the mismatch is still there as far as the meter is concerned. The tuner should be last before the antenna. Nothing is going to change the impedance of the antenna, short of electrically or physically altering it, but you will achieve a match in all devices before it, thus allowing things to work as they are designed. True, the antenna will still not be matched, but everything before it will be fooled into thinking it is.

Hi,

I'm in the market for a pair of hand-held radios to communicate with my family when we are camping, I'm typically fishing & they're are involved in other things. I "obtained" a pair of Midland two-way radios, that a) have no range, b) have poor battery life, and c) are useless in crowded area's.

I was thinking about a hand-held CB set that would give me a 2-3 mile range. What's available? Could I find something reasonable on ebay?.

Thanks in advance.

But it sure helps your gas mileage.

What people don't realize is that more gas is added to the mix to compensate for all the extra air, blowby and exhaust inducted into the manifolds. When these systems aren't working right, your mixture is too rich causing unburned fuel to burn up in your converter and increasing all types of emissions.

Just part of keeping a car happy and running. I got 223,000 out of an '86 305. I ran that sucker hard all this time. I now get to pick up a $100 motor out of a car destined for the junk yard. It's already planned out, cherry picker lined up and needed parts are being acquired from the local auto parts store. I should be able to get some money for the old core engine from one of the many remanufacturers.

The 4cx250b is a very rugged tube, unless you are planning on sending an amplifier up in a rocket... the B version is just fine.

My goodness Leland, where do you come from using big terms like power drift..? Do you even know what it really means..?

I've got/had or placed all the versions of the tube in service. When buying new, the R version is much higher in price. Most everyone is not going to need the R as the B is very hardy and hard to kill unless you abuse it.

Regular mobile operation is not a problem for the B version.

Aaron,
Again you fail to realize that it is No Big Secret,
hams are just as guilty of running illegal gear as the average
CBer... if you dont understand that statement then why do builders of
amatuer radio amplifiers build and sell amplifiers that are able to
produce 2 to 3KW QRO,Ameritron,Henry,Alpha and the big three will
produce radio mods to anyone with a fax machine.skip the export
bullshit because you and I know that if you want one of these units
crisp green benjamins will get it to your door. How many holier than
them hams have made Hollingsworths Rain Report for illegal activities
from jamming to illegal power and out of band operation.HUNDREDS!

At least the keydown guys stay where they belong.. on the real CB
band. I have never heard someone tryin to be a superstar above 40 or
near the 10 meter band... more than I can say for our fellow hams
found operating in the freeband.
In closing there are illegal activity's everywhere ranging from the
Enron scandal, to illegal amps, to someone stealin your ole ladies
pussy...
It is a fact so live with it..
If you wish to carry this conversation further then I will be the Ham
standing on the line Hollerin $50 on the longnose suburban from
Michigan. Hell, I might even drink a master cylinder and smoke a blunt
with the rest of the ''GoodTime Gang''
Funny how this ham isn't afraid to use his name in a open forum,
whats your excuse VOOBIE?

4576. Yaesu FT-101 Tube Question..

Newsgroup: rec.radio.cb
Date: 2002-03-22 01:05:14 UTC
From: chilinvilin@webtv.net
Message-ID: <28768-3C9A834A-65@storefull-613.iap.bryant.webtv.net>
Source record: 118890

I just got this Yaesu 101 with the YC-601 frequency counter. The thing lights up and receives real well but the guy I got it from says the tubes need to be replaced so I haven't transmitted on it.
I pulled the tubes out and the two final tubes (Labelled 6JS6A Toshiba) have what looks like some glass rattling around inside them. The driver tube (Labelled 12BY7A) seems fine.
Question is where can I get these tubes?
After replacing them what will be the output wattage of this unit?
Thanks in advance....
L8ter,
JP

Since you have justified illegal behavior, then I guess you won't have
any right to complain when someone steals your suburban.

Problems. Man, you have plenty to spare! You are using the correct fuse value, right? Does the fuse blow immediately when you power the radio, or when you push the mic ptt? Can't imagine the antenna having anything to do with this, but for grins, unhook the antenna and try it. Can't hurt much in a few seconds of keying the mic. I suspect that something went wrong with the wiring between the radio and the battery, but you should have a direct run to the battery with a fuse there as well. You do, right?

I AM 100% correct.

TV and FM stations, when they are required to have directional patterns, have ERP rated for the maximum that is produced. There may also be a requirement that the signal be suppressed x dB in other directions, but that has nothing to do with ERP of the antenna.

Cell sites control their ERP in different directions by using different antennas. The ERP is computed for each antenna separately - with the antenna being chosen generally based on need.

No, field strengths are measured. ERP is computed. How can you
measure it, when the value is simply watts - not watts/meter or
watts/cm^2?

Why is this so confusing to you?

That is fine, if you doing your initial tuning of the antenna. But you can
do that without the amp.

As I stated before, the tuner does NOT change the SWR - so why place an
SWR meter there? You might use an RF wattmeter - and tune for maximum
power, but the SWR meter gains you nothing.

If you use a tuner, you need an SWR meter between the amplifier and the
tuner. Otherwise, how are you going to adjust the tuner so it can match
the amplifier to the input impedance of the coax going to the antenna?

Radio noise problems have zero to do with vehicle reliability.

It seems to be true that GP pays a bit more attention to rf noise
suppression - at least for outside the vehicle. But the AM/FM radios
in Fords don't seem to be any noisier than those in GMs.

By the way, I don't even own an American made automobile - although I
have rented them. As such, I am rather impartial.

So this has nothing to do with there erp, just radiation patterns and field
strength.

That is if a TV transmitter in one
> > city thats on channel 9 is close to a TV transmitter thats on channel

Yeah thanks for the revelation but again repeaters do this all the time.
What does this have to do with calculating ERP besides nothing?

Yeah...I made sure it was the correct fuse, which is a 2-amp 250V.......the fuse seems to blow w/o even keying. the very 1st time the original fuse blew, it seemed to happen after I keyed...the next 2 which blew in the radio shack lot as I was trying it blew immediatly as I turned the radio on....that was with the first antenna I switched out this morning hooked up........then i switched out the 2nd antenna just to make sure it wasnt THAT actual antenna..this one was the same model and everything...at that point it seemed ok with just the juice on but as soon as I started the engine...boom, out.

I suppose i could try yanking the antenna...but ill have to go get more fuses as i've blown 3 of the 4 i bought lol.

I agee it sounds like the hardwiring may have slipped and is now shorting with something....could very well be a coincidence that it just happened today with the whole new antenna thing.

Yeah the CB came with a fuse casing (w/ fuse supplied)...black line is grounded and the red for power runs from the CB, through the fuse casing and then it goes up underneith the steering wheel where it's tied off somewhere onto the ignition juice run...my friend did that so I'm not sure EXACTLY what he did....but my guess is whatever he twisted it onto (he taped it up) came loose and now it's touching something else and giving my CB too much power.

Sound about right?

That's about the size of it. Do you have a volt ohm meter? Check for continuity. Trace the red wire up to where it is connected and unfix it. Do the same with the black wire. Go to the store--auto parts, hardware, and get a couple lengths of at least 14 awg wire (12 if you can find it) of different colors. Red and black would be real nice. Run them through the firewall and connect to the battery terminals. Another in-line fuse on the positive wire at this point would be real nice. 10 amps would be nice. If the wire grounds it will blow the fuse. You will need a couple wire lugs to fit the poles of the battery terminal. First though, connect the wires to the pigtail of the radio and insulate with electrical tape. Soldering them is NOT overkill. Soldering the lugs at the battery is also NOT overkill, but do it before you connect them! Growl at your friend when you see him--he did you no favor.

OK Aaron, I've wondered this for a long time, and since you've chosen to post the link again....why is it that in the picture of you and your family, it appears that your head looks like that of the fictional "Yeti" from the Himalayas? You know, kind of stretched vertically. Just an observation. Is it that, like the Yeti, you have yet to be proven to exist?

BTW, what's that call again? Or, did you not have time to take the test with all your ranting here?

Use STRANDED wire only. Solid wire will break quickly in a
mobile environment. I always solder and shrink wrap my
connections.

R4 & R6 are for the final "tweak" to bias. This will be necessary to allow for variations in the beta of the devices from unit to unit. The "double tweak" vernier is necessary as the branch current is about 1Amp paralleling the base of the devices.

You suggestion about the choke at the input... hmmm, I'll have to think about that for a while... but one of the features of this amp I have incorporated is that it can not only be RF keyed... but it will except a DC key signal should that be available multiplexed on the input. I have used this method many times in my "super swing" radios that lack the drive power to pull the relay in. The circuitry as it stands now will accommodate both.

You are correct about C7, but I included it as a precaution that a DC source might inadvertently get hooked to the output.

I have been running this exact circuitry in two units for several months now with good results and no reported problems. I plan on having 10-20 PCBs (depending on the "sweet spot" price) made in the next few weeks for more trials.

Good to hear from you as always...

Well at least I can ALMOST bet it's not antenna related, which is good cuz i like this new one I got.....over the weekend we'll trace this power and see what happened....is it necessary that it be wired the way Gary said? Or is the way my friend did it OK but risky for shorting again?

It isn't confusing at all. I may have left out the steps for the sake
of brevity, but regardless of the number of steps from field strength
to ERP it is still a value based on actual measurements, not
estimations or "allowances".

The guy that did the wiring says the problem, if electrical, must be occurring in between the fuse and the CB (or within the CB itself).....he says whatever is happening, is happening THERE...not on the battery/power end before the fuse (or in between the battery and the fuse).....make sense?

What are my odds, if any that the antenna could have somehow messed up the CB or be causing it to pull more current (if that's what is happening)?

Axl,
Not really. You can find a ground near the radio
instead of running two wires to the battery. I think
the problem(?) with the antenna just happened to happen
at the same time as the fuse blowing problem, there's
no reason for an antenna to affect the primary power of
your radio. Your best bet for finding the power problem
is checking for improper wiring. If the wiring turns
up okay, then you have a problem with the radio it's self.
'Doc

It sounds like you have a bad ground in your ignition system. If you have a meter, check all the ground paths. Probable points of failure are at the coil, the distributor, or the alternator.

A simple fix is to get one of those noise filters from your local parts store, and install it in-line on the hot wire to the radio. If that doesn't fix it, try adding a filter (high-pass), also available at your auto parts store, to the antenna lead.

Oh, and ignore all the ignorant rantings about your choice of vehicle. This happens to most cars as they get older, due to corrosion on the ground leads.

P.S. I'm an Army radio tech, so I might know a thing or two about what I just posted.

Axl,
If your friend is sure the problem is not in the wiring, then it definitely isn't the antenna. I'd have to say it's the radio. Have it checked, or if new, replaced.

That "stuff" you see inside the tube is likely mica, from the insulators between the tube elements. Usually you can't tell that a tube is "bad" by looking at it (unless it's physically broken, or has been heavily abused).

You can get tubes from a variety of mail order places (like RF parts). But be aware that there are subtle differenced in inner tube capacitances between the various makers of the same number tube. I seem to remember that if you use a tube from a different manufacturer than what Yaesu originally used, you may run into problems when trying to neutralize the final, and may require a modification to the radio.

With a fresh set of tubes, the FT-101 should put out about 130 watts on the lower bands, and between 100 and 120 watts on 10 meters on SSB. AM carrier power is adjustable, but it is not recommended to run a carrier power above 30 watts.

Any time you wire to other than the battery, you risk having noise problems from other auto electric components. You can wire it to the fuse block for all I care, but next week you will be asking why that, when you start the engine, you get all this static noise on the radio. Just trying to save a step here. Yes use multistranded wire. Perhaps I wasn't clear. Actually, find a stereo installation place and see if they have black/red zip wire--it's like lamp wiring in two parts but color coded. Avoid the stereo speaker wire at radio shack--it can't take the heat under the hood.

The FCC's definition of ERP, and I even quoted it for you. Since you
don't disagree with it, why don't you take a valium, untie your
panties, and explain exactly what it is you think I am disagreeing
with?

> dBi) plus the power (in dBm) into that antenna.

Which "main lobe"? There can in fact be more than one depending on the
antenna design, and not all of them necessarily equal in gain either. While
your definition may be a "common" understanding of what is meant by ERP, to
be completely non ambiguous you need to specify which lobe(s) you are
referring to in a complex antenna pattern. Some people design their
horizontal antennas to get several lobes at different take-off angles for
working DX stations and working local stations as one practical example.

Hmmm, that Air-Force pic looks suspiciously like a picture shipboard in an Amphibious Landing Carrier. Also, the uniform lacks the blue lettered name tapes typical of AF uniforms. Last, but not least, the assault style M60 is not an Air Force issue item. That's a picture of a Marine, son.

Did the bump on the head that lead to the later conehead look occur in the Marines and lead you to think you were in club fed instead of Mogadishu?

Voob on!

well actually i think that is a tossup.......both have their good
points and their bad points.......and neither one is 'better' than the
other one....on that issue, you have to ask..... on what day......

14? 12?? He's not powering his entire car off the wire! for a cheap 2-amp radio he'd be more than able to power the thing off of 18 awg for Christ sake... I'd suggest 16. With this, you'd still be set even if you were to upgrade to a more power consuming SSB radio down the road...

Introducing the MSN One Plan
Get the best of both worlds: MSN® TV service through your television,
PLUS MSN Internet Access on a home PC - for only $21.95* a month. It's
like two for the price of one.
http://www.msntv.com/oneplan/
-
For two pieces of crap, MSN is among the worst ISP's. Their broadband is
even worse go check out the MSN forums at http://dslreports.com for
enlightenment.
-
-As long as it serves it's pupose is all that matters. Depends what you
use it for. I had a problem, they promised it fixed within 24 hours of
receiving my notification and they made good on it. Some customer
service centers can't even be reached.

Sigh. I'm not even going to attempt to debate you until you get a mail reader that knows how to quote and display text properly.

-Well, that's good, because last time you failed miserably by turning insultive and displaying a strong tendency to not stay on topic.

That has to be the biggest run-on post full of juxtaposed jibberish that I've ever seen. I'm just not interested enough to go through the pain of parsing your comments out.
Dave
"Sandbagger"
-
-Good, You should really know enough to at least know who you are dealing with.
-
There's no doubt about that.

-If there wasn't any doubt, you wouldn't have thought it was I you were replying to. Then again, maybe you knew it all along.

That's one reason why I don't want to waste my time.....

-But you DID erroneously reply to what you thought was me. Now that you realize it, it's become a waste of time. Bravo.

Try to tell a nut that he's nuts, and he'll think you're crazy......
Dave

Actually, it's not a pic of a Marine. 1) The guy in the cammies was too fat, and his shoulders were to skinny. 2) Marines have nametapes just like the airforce do, only ours were green. 3) Ain't no way in hell that Voob would have made it through 3 weeks at Parris Island, much less 13. He MIGHT have made 6 weeks in San Diego, but then again, those "Hollywood" Marines got it easy out there.

SD:
The Crusades were Spanish Catholics, with the blessing of ROME (the Pope), that went on the binge KILLING those who would not become catholic, and went as far as the middle east. Today, the taliban and the Al-Kieda all-righta mooselims thinks that the US is engaged in some kind of catholic crusade again! And no wonder--the catholics have TAKEN OVER the country, along with the Rev. 2:9 & 3:9 people! So what is a free people to do? 2 Chron. 7:14 IS the answer!!!!!

> My goodness Leland, where do you come from using big terms like power
> drift..? Do you even know what it really means..?

In fact yes I do. This tube is commonly used in VHF and UHF power amplifiers. In those amplifiers a resonate transmission line is used as the tank circuit. This transmission line is simply a sheet of copper cut to a particular dimension, nearly a 1/4 wave length at the operating frequency, so that it can be "fine tuned" by adding a tiny amount of capacitance to it. Part of the tuning capacitance is the Plate to Cathode capacitance, for a grounded Cathode design. When the tube heats up the spacing between the Cathode and the Anodes changes, thus the capacitance will change, thus changing the proper tuning of the amplifier. Since the "tuning" of the amplifier changes you can see a drift in the power output of the amplifier as it heats up and cools down, thus you have power drift. This is all mostly due to the dimensional changes between the tube elements. The "R" version of the tube seems to be some what more dimensionally stable than the "B" version and is preferred by experienced V/UHF amplifier builders for that reason.

Hello All,

I am new to your site. I like what I have seen.

I am looking for the manual for a Craig model L102 CB unit. I need to set the RF gain and set the SWR's with the calibration controls on the set. This unit was a gift and person does not have the manual.

Or instructions would be fine.

TIA.

Skeeter

> Saw this on a Tee-shirt:

Major/main lobe: "The radiation lobe containing the direction of maximum radiation". For most practical antenna there is only one main beam.

Antenna pattern: The antenna pattern is a graphical representation in three dimensions of the radiation of the antenna as a function of angular direction. Antenna radiation performance is usually measured and recorded in two orthogonal principal planes (such as E-Plane and H-plane or vertical and horizontal planes). The pattern is usually plotted either in polar or rectangular coordinates. The pattern of most base station antennas contains a main lobe and several minor lobes, termed side lobes. A side lobe occurring in space in the direction opposite to the main lobe is called back lobe.

"Sparky" <sparky@cet.com> wrote in message
news:3c9b37dc.26515922@news.cet.com...
> >Sparky we are still waiting for you to post a reference.
>
> Did you miss this post? Why do you keep asking for references when you
have already agreed on
> >the definitions? That doesn't make any sense. Here you go anyway:

No just the references are not specific to your claims and at least 4/5 of
those references I posted to back my claims and you said at the time I
missed the point, and Well here is what you said in direct response to a
Quote I took from one of the links

"You forgot about reflected power (if any), the radiation efficiency of
the antenna (which is not the same as antenna gain), RF radiation
losses from the coax (caused by mismatch, direct induction, or
containment failure points), and insertion loss from connectors and
other devices (including any choke that might be used on the coax).
Then consideration needs to be given for any nearby objects, natural
or artificial, that might absorb, reflect or refract the signal. There
are also ground losses, HAAT, polarization,.... "

I gave you that you now want to twaist back to me well lets just take a look
at them other than you agreeing that ERP is a product of Transmitter power,
antenna gain and coax losses if any.

> >http://www.access.gpo.gov/nara/cfr/waisidx_00/47cfr73_00.html

This link is part 73 Which subsection are you referrring to aregarding how
ERP is measured. ?

> >http://www.its.bldrdoc.gov/fs-1037/dir-013/_1908.htm

Ok this link I posted and I used the exact definition, As stated the type of
reference antenna must be specified, where does it mention HAAT?

effective radiated power (e.r.p.) (in a given direction): 1. The power
supplied to an antenna multiplied by the antenna gain in a given direction.
(188) Note 1: If the direction is not specified, the direction of maximum
gain is assumed. Note 2: The type of reference antenna must be specified. 2.
The product of the power supplied to the antenna and its gain relative to a
half-wave dipole in a given direction. [NTIA] [RR] Note: If the direction is
not specified, the direction of maximum gain is assumed.

YET, you directly said in response to that statement

"You forgot about reflected power (if any), the radiation efficiency of the antenna (which is not the same as antenna gain), RF radiation losses from the coax (caused by mismatch, direct induction, or containment failure points), and insertion loss from connectors and other devices (including any choke that might be used on the coax). Then consideration needs to be given for any nearby objects, natural or artificial, that might absorb, reflect or refract the signal. There are also ground losses, HAAT, polarization,.... "

==========
==========

> >http://www.cssantenna.com/technical/notes.html

This link states, note the use of the word relative! I still see no mention of HAAT for the equation of ERP, Gain, or efficiency.

Effective radiated power (ERP): "In a given direction, the relative gain of a transmitting antenna with respect to the maximum directivity of a half-wave dipole multiplied by the net power accepted by the antenna from the connected transmitter".
Antenna efficiency: The total antenna efficiency accounts for the following losses: (1) reflection because of mismatch between the feeding transmission line and the antenna and (2) the conductor and dielectric losses.
Antenna gain: The maximum gain of an antenna is simply defined as the product of the directivity by efficiency. If the efficiency is not 100 percent, the gain is less than the directivity. When the reference is a loss less isotropic antenna, the gain is expressed in dBi. When the reference is a half wave dipole antenna, the gain is expressed in dBd (1 dBd = 2.15 dBi).

Gain pattern: Normalizing the power/field to that of a reference antenna yields a gain pattern. When the reference is an isotropic antenna, the gain is expressed in dBi. When the reference is a half-wave dipole in free space, the gain is expressed in dBd.
==========
==========

> >http://www.marcspages.co.uk/tech/antgain.htm

Ok this is another of the web pages I posted as a reference still no mention of antenna height effecting erp.
Antenna Gain Explained
This one stumps even some of the most advanced RF engineers, that is, the "gain" of an antenna. Even the law states that the "Effective Radiated Power (ERP) will not exceed..." and this is based on the input into the antenna multiplied by the antenna gain.There is this concept that, the moment they exhibit gain, antennas magically create power within themselves. Sadly, this is not the case. If one examines an antenna it will be noted it is constructed of basic materials, the best being gold, silver, copper, then aluminium following on. These materials in themselves cannot create power. Before we go into any explanations there are some terms that need definition so-as to assist in the explanation of antenna gain.

Antenna Gain: The relative increase in radiation at the maximum point expressed as a value in dB above a standard, in this case the basic antenna, a ½-wavelength dipole (as in Two-Poles) by which all other antennas are measured. The reference is known as 0dBD (zero decibel referenced to dipole).

==========
==========

Ok these next 3 links are again more of the same ones I posted citing my claims, but not one of them says HAAT effects the erp, and what ever else you claim Frank.none is found on those pages.

> >http://www.amlwireless.com/list.htm
> >http://life.itu.int/radioclub/rr/arts01.htm
> >http://isp-planet.com/fixed_wireless/equipment/2001/dMystifying_dB.html

Sparky Wrote the following with no references backing anything he stated regarding ERP in the below thread which contradictes your previous definition of ERP, he even states transmitter power is not part of the equation what is it Frank Is it or Not? Please make up your mind and quit the back peddlin. Where is Toll Free when you need him.

"Alright, let's get to the bottom of this. You want to know how to determine ERP? Fine:

First, map your field using an absolute field strength meter. Do this by taking readings at (ideally) equal distances and equal degrees of arc, and at various altitudes. Since these readings are only points, you need to apply your calculus to derive the proper 3D map of the field. And don't ask me to teach you calculus. From that map you can find the angle of maximum radiation, as well as the value of field strength for a specific distance from the radiator at that angle. Since you have already mapped your field, you then derive the total power radiated by the antenna. Then compare that with the antenna's input power. Next you measure the RF current and voltage in the antenna (easy enough with an RF ammeter and voltmeter). Use each measured value to verify the other measured values (power, voltage, current, radiation resistance, etc). They don't always agree, so measurements and calculations must be done over and over to resolve the errors.

BTW, transmitter power is NOT part of the equation -- antenna input power IS. There is a distinction: You can have multiple antennas on the same transmitter, or multiple transmitters on the same antenna. Same difference with transmission lines. This should give you a clue: ERP = Effective RADIATED Power. Transmitters don't radiate, antennas do. Same difference with transmission lines (again, ideally). So leave transmitters and line losses out of ERP. I'm sure the ARRL and others have modified the equation to make it simpler for hams to understand, but that doesn't make it valid, just easier to use in a practical application."

The 4CX250R is designed specifically for use in Class AB1 liear amplifiers
where shock and/or vibration preclude the use of nonruggedized tube types.
The 4CX250R will replace the 4CX250B in equipments where the range of bias
adjustment will tolerate this higher perveance tube and where tuning range
can compensate for the small differences in input and output capacitances.

The 4CX250R will deliver more output in most linear amplifiers which presently employ the 4CX250B and it will operate with maximum rated plate and screen voltage applied in equipments where shock and/or vibration is experienced.

Well, lacking a manual... maybe I should tell you the first part. The RF gain control works on receive only . It's purpose is to have a means of attenuating signals that are close. By doing this you can eliminate much of the annoying background noise in an established conversation. Otherwise, this control is normally turned all the way up for maximum sensitivity while monitoring or communicating with a distant contact.

Good questions. USAF, as stated, and the particular security I was involved in required shipboard transport. A clue to deployment is the camo pattern on my OD fatigues (note, no SSI). And of course, the M60 was "borrowed" from a buddy just for the photo, as per custom. OK detectives, who can tell me what the "C3" stencil on its stock means?

You have a point. SWB sold me a line that 15000 ft long for DSL, then a year
later, lowered their maximum by 1000 ft. Just so happens that about a month
after my year contract was up, I started having problems with connectivity,
and they could not fix it, so I bailed to cable, and have had up speeds of
350k+, and downstream speeds of 1900 to 2100k. About three times the speed
of DSL at my distance. I can't complain, so far.

Or a good amp thats tuned to as close to 50 ohms.

4678. Need some help with a Uniden Grant XL quickly.

Newsgroup: rec.radio.cb
Date: 2002-03-23 00:31:07 UTC
From: unscore@mm2k.net
Message-ID: <9966df0f.0203221631.39bfdb6b@posting.google.com>
Source record: 119040

Hello, I'm looking for someone who knows how to tune a Uniden Grant XL and could possibly help me with a little problem. More like major problem the way I see it.

I obtained this radio from my brother who bought it new and was told to adjust some pots in the radio for more AM/SSB power. (VR10,VR11) Come to mind on what should have been adjusted but instead he went through EVERY SINGLE POT in the radio playing with its settings! I know this is a damn good radio and I would hate to have to junk it over something so simple.

I need to know how to retune or adjust these pots to factory spec or tune them up for the better if possible. I don't know what they do or are for and I'm not a technician by any means. If anything could be explained about them it would be greatly appreciated. Also, the only CB shops or techs we have around here are ripoff artists! I swear I could buy a new rig for what they charge for some simple ``Repairs". I asked a local shop about getting the ``Ears" on it tweaked and peaked and they wanted upwards $100!!! No way! I've talked to truckers about shops that'd do the same thing for $20. Why such the bad luck? I'd love to make this a SSB screamer! Being able to adjust it for more sensitivity would be a HUGE plus!

I'd really love to make this my SSB rig and get some DX'in going! So far I haven't been able to make much contact with anyone so I think the radio is seriously out of whack! =(

If it's possible to adjust these without an oscilloscope please, help me out!

I think of my self as an honest person and would gladly compensate someone for their time via paypal if you could help me get this Uniden on its feet again!

Thanks for your time,
Jackson

True, but most cheap transistor amps do not have tunable input.

If the fuse in the CB hot lead is the one that is blowing, then your
friend is correct. But that still does not excuse how he made the connection.
Twisting wires and taping is NOT the proper way to do the installation.

At a minimum, crimp on "T" connectors are needed.

> What are my odds, if any that the antenna could have somehow messed up the
> CB or be causing it to pull more current (if that's what is happening)?

Unlikely.

But if your friend hooked it up backwards at first, many CB sets have
a polarity protection diode that could be shorted. But that generally
will blow the fuse as soon as the radio is turned on.

Yep. There are notes available that describe the necessary modifications
if using non-Japanese tubes.

A slightly high input match would really just require more drive to overcome
the losses. Not that big a deal.

4685. RADIO LAW: FCC REFUSES TO SIDE WITH CBER

Newsgroup: rec.radio.cb
Date: 2002-03-23 01:51:55 UTC
From: Jester <maverick@topgun.comSPAM>
Message-ID: <%cRm8.359191$pN4.23975804@bin8.nnrp.aus1.giganews.com>
Source record: 119046

(AR Newsline, Mar 15)

RADIO LAW: FCC REFUSES TO SIDE WITH
CBER IN LOCAL CITATION CASE

The FCC has refused to hear an appeal by an Illinois C-B operator
who was onvicted of Disorderly Conduct for using an 11 meter
Class D Citizens Band Radio.

Gary D. White is among the first C-B operators dinged under a new
authority granted by the Federal Government to states and municipal
law enforcement agencies. Authority to control interference caused
by operators of Class D 11Meter C-B radio sets.

White was convicted on a state Disorderly Conduct charge of
operating his C-B equipment in an unreasonably loud, offensive,
harassing or threatening manner. He was not convicted of violating
any FCC rules. White believed that the citation was based on
interference to a neighbors telephone and television receiver. This
in itself is not a violation of FCC Part 95 rules. And because
of this he also believed that local authorities had no justification to
sanction him. So he appealed the conviction to the FCC.

But the FCC says that the proof of guilt on the Disorderly conduct
allegation is not in its purview to consider. This is because no FCC
rules were violated. Also, under a law enacted by Congress in
November of 2000, state and local governments are free to enact
laws to enforce existing Part 95 Citizens Radio Service rules.

Bottom line. The FCC will not interfere in the case and White will
have to find other avenues if he wishes to continue his appeals.

--
Congress enacted the law to give state and local authorities enforcement
authority over 11 meter C-B operators due to the rising tide of unnecessary
and harmful interference to other people using radio devices in near-by
spectrum. This includes corded and wireless telephones, television
receivers, stereo Hi-Fi sets and other consumer electronic gear. Ham
radio is specificallyexempted from the law and any ordinance it may be
used to create.

<snip>>

Incidentally, I cut my driving teeth on a 1958 Ford Fairlane. But it was
when I became of
age that I discovered that the Chevy always seemed to be a cut above Ford.
Not only in
noise suppression, but in ride, build quality, and reliability. It is why I
have that old Chevy
wagon sleeping soundly in my garage. Except for that pesky spark plug that
dropped an
electrode in the #1 cylinder, I have no doubt that old car would still be
running. I intend to
replace the engine (that is one of those "round tuits" that keep getting put
off) and keep going. They don't make station wagons like that anymore
(American), and I cannot find a
vehicle that will carry what that old Celebrity will and still get 28 MPG.

4687. MURS Users Group forming

Newsgroup: rec.radio.cb
Date: 2002-03-23 02:02:21 UTC
From: horseshoe7@yahoo.com
Message-ID: <5f4fe4c2.0203221802.14dcd8a7@posting.google.com>
Source record: 118898

The MURS-OPEN group has begun to form the MURS User's Group. This group will be a non-profit corporation whose main goal is to encourage the growth of Multi-Use Radio Service. If you are interested, please visit our group at:

http://groups.yahoo.com/group/MURS-OPEN/

MURS (Multi-Use Radio Service) is a fairly new no-license VHF personal radio service which operates on 5 former low-power VHF itinerant business frequencies at 151.820, 151.880, 151.940, 154.570, and 154.600 MHz with a maximum ERP (Effective Radiated Power) of 2 watts. The FCC MURS rules permit voice, data, and image communication; as well as external antennas. Unlike the Amateur Service, there are no restrictions on business activities with MURS, and the 2W ERP limit works as a major benefit for a building a nationwide Internet-backboned public-access wireless network.

Interesting I guess but someone's lawyer sure picked the wrong forum. It is damned hard to argue Federal preemption under the Communications Act in the face of a specific act of Congress granting the locals authority and a specific waiver of Federal preemption. The only thing the FCC decided was that it isn't their problem.

NO, I don't twist anything in it. There are NO private interpretations of the Bible. It interprets itself. Which part didn't you understand? It says that those that seek the Lord understand ALL things. Unlimited understanding. College don't give that! I believe you are a fundamentalist of another kind!
Dave!!!!!!!!!!!!!!

>antenna gain and coax losses if any.

I never agreed that transmitter power and coax losses were used to
determine ERP. Regardless,

>> >http://www.access.gpo.gov/nara/cfr/waisidx_00/47cfr73_00.html
>
>This link is part 73 Which subsection are you referrring to aregarding how
>ERP is measured. ?

47CFR73.14, .44-.69, .207-.215, .310, .614, .686, .811, .1235, etc.
There are several more. I gave you the link, are you actually telling
me that you couldn't even read the titles?

>--

<snip>

>YET, you directly said in response to that statement

I did not. This is the statement to which I responded:

>effective radiated power (e.r.p.) (in a given direction): 1. The power
>supplied to an antenna multiplied by the antenna gain in a given direction.
>It is not difficult to determine ERP for a given installation. First you
>need to know the exact power output from the

<snip>

If you continue lying about what I wrote I will have to start
comparing you with twistie.

>==========
>==========
>
>
>> >http://www.cssantenna.com/technical/notes.html
>
>This link states, note the use of the word relative! I still see no mention
>of HAAT for the equation of ERP, Gain, or efficiency.

And you probably won't. Those links had only one thing in common: that
ERP is determined by antenna input power and antenna gain. Antenna
input power is not necessarily transmitter power less coax losses, as
you have apparently acknowledged recently.

But now that you have pointed out your issue with HAAT, you might try
reading Part 73. ERP and HAAT are tightly related, so much so that
limits are placed upon both interdependantly. This is because HAAT
directly affects ERP. It only takes simple logic to understand that
when you change the height of an antenna you change it's radiation
pattern, and therefore it's radiated power at the point of maximum
gain. Is this too difficult to understand? Should the FCC dumb-down

its rules for the non-technicians?

>Sparky Wrote the following with no references backing anything he stated
>regarding ERP in the below thread which contradictes your previous
>definition of ERP, he even states transmitter power is not part of the
>equation what is it Frank Is it or Not? Please make up your mind and quit
>the back peddlin. Where is Toll Free when you need him.
<snip>

I referenced it, you just didn't read it.

Now, to reference my original post again;

>"You forgot about reflected power (if any), the radiation efficiency of
>the antenna (which is not the same as antenna gain), RF radiation
>losses from the coax (caused by mismatch, direct induction, or
>containment failure points), and insertion loss from connectors and
>other devices (including any choke that might be used on the coax).
>Then consideration needs to be given for any nearby objects, natural
>or artificial, that might absorb, reflect or refract the signal. There
>are also ground losses, HAAT, polarization,.... "

Since the only issue you disagreed with was HAAT, you acknowledge that
all the other factors have an effect on ERP. Yet the websites I
referenced do not mention antenna height OR all of the other factors.
So why just pick out HAAT? Or were you just nit-picking?

I thought I had better answer these so you won't have another reason
to gripe:

>Sparky Wrote the following with no references backing anything he stated
>regarding ERP in the below thread which contradictes your previous
>definition of ERP,

My definition of ERP is the same as ERP defined by the FCC, and hasn't
changed since I learned it many, many years ago. If you think I
contradicted myself, maybe you should quote both statements for a
comparison.

> he even states transmitter power is not part of the
>equation what is it Frank Is it or Not?

No, transmitter power is not part of the equation, and neither is
transmission line loss, as I have said many times before. Is there
something wrong with your news reader?

> Please make up your mind and quit
>the back peddlin. Where is Toll Free when you need him.

I don't know where he is. He vanished leaving quite a few issues in
need of clarification, but everytime I press those issues his ISP
breaks down or something.

So puting the meter before the tuner will magically block out all reflected power readings? I don't think so. Looking at it this way says that if you don't have a tuner, you will always read both fwd and ref power, which just isn't true unless you're using a really cheap-o meter.

Luckily I use all combination tuner/meters if I use a tuner at all.

> > Class D Citizens Band Radio.

This should not come as a surprise. In the past I've heard of the local law coming down on cb'ers under the guise of public nuisance and disorderly conduct as well as profanity.

I'd sure like to know what the cb'er was doing to attract this much attention to himself.

I am particularly dismayed about the whole episode because the Fed's didn't stand up for the cb'er. If in fact this whole thing is about interfering with consumer devices, the cops should have been looking at the Fed's and asking things like why aren't you mandating tighter filter design rules on all those domestic and imported consumer products?

I believe the lack of design enforcement in consumer devices is, and has been, 90% of the problem sources faced by the Fed's. It's their own doing.

If I were still a hamster I don't think I'd be taking much delight in this. Although the rules magically exempt hamster radio I doubt the local constabulary knows those rules. If the general populous gets wind that the cops can become involved in interference complaints I bet there'll be a lot more complaints to the cops..and a lot more doors being knocked on including hamsters.

I wasn't really getting on him... just wondering why someone so vociferous wouldn't give out their handle.

And you are correct, I have been moving rather slowly on the new SkyWave 2879AB... but I'm ordering about 15 PCBs this weekend for use in trial units. I will opt for rather slow delivery (2 weeks+) to keep the total price of the boards below $300. Once this is done, the project can move along more quickly...

the tuner is the last thing before you antenna, period. you put the meter before your tuner so you can actually see what your tuner is doing as you adjust it. if your meter is AFTER the tuner does it even change at all when you adjust the tuner? and why are you usoing a tuner for the freeband when your Imax2000 if working properly should not need one?

Galaxy 250 blue face low drive amp. It has 3 power settings and a
pre-amp for receive. Used once; perfect condition. $100 US or $165 Cdn
and I will ship.
Terry VE4UC

I'm Jim. Scott is a radio neighbor of mine. Flip Top is another
neighbor. We all went to the same school. We've talked all about
the asshole George. So if I sound like I'm familiar with the situation, I am.

I just hung up with Scott. He says fuck George. (Figuratively)
He also says to tell Mopar and Landshark about this new email
address of yours. From what I've read, I don't have to!

Me, Scott and Dave will talk bad about you (George) tonight. We'll
laugh and carry on and have lots of fun. We might even get together
and guzzle a few. You're welcome to join us, just drive down here.

A "hamster" would point to the license and if the police have read the law, they would then leave. Or, if they are intent on issuing a citation, the "hamster" should accept it, show up in court, and politely make a fool of the officer who issued the citation.

Yeah ok Scott, Anyhow who is George?
Scott do you and Jim use same computer? How is it you are friends with
Scott, kinda funny that you are friends with him yet never ever posted here?
You have made what 5 posts or so to this NG and now you and Landwhale are
best friends ... Scott you are very funny.

And when the spots die or you get tired of AM crapola:

http://ah0a.org for Morse Academy (won't run under XP I am told). Buy a cheap set of earphones from Walmart and write on the back of your printer errors when you aren't doing it on the screen. Think of it as Nintendo. Kind of like Scots whisky and sauer kraut, no one loves it the first time but it grows on you and in about three weeks or so you may still not like it but you can do it.

http://www.qrz.com for sample exams. The first two are not major mindbenders. Study in the bathroom.

http://www.arrl.org for a good Morse CD, pretty decent pubs, and all the poop.

With all due respect to AE 352 when you go sideband and enter real radio you are ready to do radio for real.

You dare to mention the 340 and the 348 in the same posting? :-)

For those not bad enough to spend eternity in a 78 Fairmont, hell will be a 58 Impala with a 348, triple turbine dynaflow, and air suspension. You, too, can be outrun by 52 Ford panel trucks and given a hell of a race by a 70 year-old on a pogo stick who gains on you as you fill the gas tank.

Wouldn't pull a greased kitten out of bed but the 413 sure as hell was smooth in your Chrysler Windsor as you whipped Granny down to the pool hall. All it could eat was the bore-out of the 348, the wonderous 409 eventually retired to where it always did belong, dump trucks and school buses.

No, that is not what he was saying. The SWR after the tuner does not
change - no matter how you adjust the tuner.

An SWR meter before the tuner is useful - as it shows the match between
the amp and the tuner. In other words, it shows you when the tuner is
doing the job it is supposed to accomplish - matching the amp to the
a transmission line with a high SWR.

An RF meter after the amp is somewhat useful - as you can use it to tune
for maximum forward RF power.

Not CB haters, KEYCLOWN haters. And the comparison to drug addicts is appropriate because there ARE in fact quite a few suppliers in the ng as well as users. Old SJD, you prove that a point that keyclowns will cause hate among themselves without any help from outside sources. In conclusion, I'd like to quote Dave Hall, chapter 3, verse 26.

-Aaron-

There are many people out there that are "on the fence" with regard to whether or not to follow the law or not. Those are the people that will
hopefully read what is discussed here and decide that it might not be a
good idea to break the law. THOSE are the people that we're trying to reach. Those that are hopelessly incorrigable will continue their anti-social ways until the law finally catches up with them. Of course you can't blame those of us that understand the purpose of law, from assisting the people entrusted with enforcing the law, by gathering evidence for them. It's called looking after our best interests. -Dave Hall

Hi Jackson,

Send it to a professional. I used to know a really good tech when I lived in Oregon. I don't think he's there anymore though. Bert swears by a guy in New Hampshire, Panther Electronics. I hear he does good work. Just let someone who has got all the right tools and equipment realign it, not a backwoods tech. Good luck to you. Take care and 73.

OptoScan,
If all your talking about replacing is the length of
wire that came with the amplifier, then, no, it will
make no appreciable difference to the amplifiers operation.
The size of power line comming from a 12 volt source should
be at ~least~ as large as the wire comming out of the
amplifier. In most cases where the run is longer than just
couple of feet, the power lead should be ~larger~ than the
wire from the amplifier. You can't have a power lead that's
too big...
'Doc

The run to the battery needs to be 4 gauge. 6 will have a
measurable voltage drop on high power. I would stay away from #10.

==================

It occurs to me that I may have misspoke myself in the earlier post.

I don't recall any rules which allows for hamsters to cause
interference to consumer devices without repercussion.

The only one I knew about pertained to pre-empting an antenna
installation ordinance. This in itself did not say it was ok to cause
interference to consumer devices. This still leaves the cops an open
if they broadly interpret the public nuisance statutes.

If the city or county wants to adopt a non interference rule/statute they can and I doubt it would protect or exclude hamster radio. I believe the situation of that backwoods, good ol' boy cop can happen. Forcing the issue of going to court by ignoring the neighbors interference complaints just because you have a hamster ticket is a sure way of wasting money and effort better spent on a new radio or at least curing the interference issues. The cops are not afraid of being sued. The city has a lot more money than you and more lawyers at their disposal. The likely result is that you may get your equipment back or have quiet hours imposed on you.

Again, I say, the Fed's created this issue to the largest degree by their typical lack of foresight when deciding what is enough rf filtering in today's electronically driven world.

There's more going on here than you think and I still wouldn't gloat too hard over that cb'ers situation.

> operating services.
>

Most of the devices in question are not covered by Part 15 anyway. This section is for low power radiators that may be on frequencies assigned to real radio services and is part of the rules of that game. Receivers are often certified that they do not radiate enough to fall under part 15 rules but it can look as if they are to those not in on the secret. But a wireless compooter link being blown out of the water by a legal licensed transmiter falls under the heading of tuffshitski. And a room full of compooters with clocks radiating to beat hell that take out a neighboring business band installation will be ordered to cease and desist. You will note that your compooter if it has a Part 15 sticker will either be certified to business grade or personal grade, the personal being more rf tight.

Amateurs have the same RFI problems that anyone else has but there are several things that greatly improve our situation.

1. We do not use Antique Modulation. If you want audio rectification supply the carrier. The issues of QST before SSB obliterated AM on the ham bands used to use as column fillers anecdotes on AM getting into eyeglasses, hearing aids, aluminum siding, toilet bowls, kids braces, and the list goes on and on and on. SSB is far less likely to be rectified at all and even when it is it sounds like Donald Duck with a headcold on the telephone and stereo. Ancient Mary is bad news.

2. We do as a group keep the atrocities to a minimum so limiters are not clipped, amps are not overdriven and actually use the ALC. And either by way of a tuner or a pi-section in the amp if any the antenna does get some isolation from the normal crap of any amp.

3. We have resources not available to the CBer. Chapter 28 of my 2000 edition Radio Amateur's Handbook is on EMI written by Ed Hare W1RFI who is on rec.radio.amateur.policy. If needed, the League publishes an RFI Book

also by Ed who really is the resident genius on the subject well beyond the ken of Red the Tech down at Happy Larry's Truck Stop, Funeral Parlor, Wedding Chapel, and Emporium of CB Delights.

We often have club RFI committees which I have served on that if nothing else take the heat out of a situation and can better deliver the message that your station needs work and your telephone problems are interesting but not illegal and leave behind some ferrite beads and appropriate photocopies for the repairman. These groups are often called upon by municipal and even commercial users for the comfort factor but there is a quid pro quo. Given the heat involved in most CB situations most groups won't touch them with a stick.

4. We have a different type of wacko. Even the net QRMers do so reasonably cleanly where CB wackos do not apparently care.

5. Amateurs do not run the power guys like this do. We can but generally don't and most of the stations you hear above 15 MHz are generally pumping 100-200 watts PEP.

There is a recent legal change. CB rules may be enforced by local gendarms which is apparently not the case here but easily could be. This guy was apparently simply an oaf.

The FCC will go to bat for its licensed services but we do have to get it straight: CB is not a licensed service and the Amateur Service is. I am an operator and a station licensee, this CBer is neither -- he is the user under a permissive grant. Odds are he was way out of his permitted uses. There is a tendency around here to more or less equate the two and in some respects that makes sense but from a regulatory perspective, the two are widely divergent.

Hello Opto Scan:

If its a short length of 10 gauge maybe not a lot. But I would go with 4 gauge wire from the battery of both terminals, to the amp.

Rock on dude.

Federal regulations supercede local ordinance, and Hamsters were excluded
from local ordinance specifically. That being said, as the saying goes,
"you may beat the wrap but you wont beat the ride".

Yep, imagine that, you hi-tech Cyber Cybernet GEEKS! A like-cardboard jacket cover that an 8 track goes into, just lying there where cars park. It wasn't mine, and no date on it. Pretty good shape for being probably 25-30 years old. Imagine that! Why is CD kinda confusing with CB? Nothing looks or is similar to an 8 track tape, unless you think of a VHS videotape! I also saw a 59 Edsel tonight, believe it or not! The PAST is comming back! I still have some NOS AM/FM/CB/8 Track Motorola units left from the past that the 8 track still works. E mail me direct @ truth@planetc.com if interested.

And of course for those that do not requires you to specify which lobe, which is my point.

> Antenna pattern:

<snip>

Nothing here that I didn't already know. All you did was just confirm my prior statement that antenna gain varies in 3D space. If one wants to know what the ERP is in a particular direction one has to specify the gain for that direction along with the other items you mentioned. Note that we are talking about "ERP" NOT "Maximum ERP" of an antenna. Your original subject line mentioned only ERP.

Bob makes some good points here. Sorry to be getting it second hand but Bozo*Flush does not pass Yahoo posts here after some bad experiences.

The most usual thing is that the FCC would indeed affirm Federal preemption. And the question here is why they chose not to. These public nusiance cases are nothing new and the ARRL has a legal kit for an attorney to plead preemption in amateur cases. I can think of several reasons:

1) He had already been convicted in a state court and while the FCC could have affirmed preemption earlier if asked or proper precedent cited in the court trial, the FCC did not believe it could or wanted to serve as an

appellate court. It looks like the doofus's attorney was trying to get some facts into the record that he neglected to raise at trial. The Commission is not the Court of Appeals and pretty much said so. Nor is it in the business of preventing legal malpractice suits.

2) The Congress passed a law giving local authorities privleges to enforce CB rules and specifically gave FCC the duty to help locals in the technical area. Having pretty well set up the arena, the Commission as any entity dependent on the good will of Congress to get paid will do exactly and precisely as they are told. And there may well be an attitude of 'they made the bed, let them sleep in it' as well. Congress might not take kindly to freeing an outlaw on a 'technicality' when they had just passed some legislation to help fix these clowns clocks.

3) Although unmentioned, the defendant may well have done a few things that made him less than the man you want to go out of your way to help. Like it or not there is no good reason to bust hump for a CBer of the type you would like to take out and shoot after you had hung, drawn, and quartered him.

4) There may well have been some evidence of illegal operation in the record in which case you can depend it would be refused for the reasons in 3.

It is a wierd case but I don't think it is a trend. Remember the FCC has to hear requests no matter how stupid so I would think they get good at the bafflegab shuffle.

The case is odd but the Amateur Service has been there and done that about the time CB was getting off the ground. And surprising tho it may be Bob, most consumer gear is better protected against RFI than it was not that many years ago.

You forgot to add the most interesting part of that section -

"... this device must accept any interference received, including interference that may cause undesired operation."

The whole thing is covered under Part 15.19(3).

What rule or statute provides that a hamster is allowed to interfere with say a phone or cable system? This question isn't an attempt to start a "thing". I'm trying to learn or at least re-learn.

4790. Re: RADIO LAW: FCC REFUSES TO SIDE WITH CBER

Newsgroup: rec.radio.cb

Source record: 119101

This is speculation; I'll be the first to admit it. But it seems that there is, indeed, more to
the situation that meets the eye. From the way I read it, this was apparently a longstanding
problem with a "loud 'n' proud" CB station with a foul mouth. The local enforcement law
at the Federal level is clear: ham interference issues must be handled by FCC. A license holder in any other service BUT CB must be referred to the FCC. Period. Yes, quiet hours can be imposed, but it is the FCC that has to do it. Not local yokel cop. He may THINK he can do it, but, lacking other issues besides merely being heard on Mrs. Jones'
toaster, the locals can't truly prevent him from operating his station. It is a good idea for
any radio station to work with neighbors to try to resolve interference by offering sugges-
tions, but not by actually installing abatement equipment. Next thing ya know, the neighbor
sues the good op for the price of a new TV if the old one goes on the fritz.

Now as to the confiscation issue, to quote a certain little yellow canary employed by Warner Bros, "He don' know me vewy well, do he?" If some fat SOB cop down at
the Donut Dinette thinks he is going to wrongfully come into my house, order me off the
air and take my equipment, I WILL go after him and the department in court--even if it
costs more than the cost of the equipment. However, I do happen to have custody of certain DOD equipment out of Maxwell AFB, AL. After a phone call to the Logistics
people down there and to USAF CID, I would bet that the equipment would be back
at home within 24 hours. CID doesn't play around--even with local yokel cops.

We are not allowed, but are required to take "reasonable" measures to
alleviate problems. But, we(Hams) are not subject to the same rules as CB
operators, as well it should be. CB's cause many more problems than amateur
radios, mostly because of inept operators and the "I'll be damned attitude"
of their owners. Not to sound big-headed here, but amateurs have the might
of the federal government behind them, unlike CBers.

===

Back in the 1980s, it was common for people to be told they needed "SWR
cream", a "sheepskin twig warmer", or a tomato on the end of their antenna.
One CB shop even had a pot of "SWR cream" on one of the shelves, near
a "twig" that was just a branch from a tree.

Back then it was also quite common for CB shops to rip customers off. They would justify a high repair cost or the "you need a new one" sales line with "we have £1000s of test equipment"... those that say that usually have no more than an old cheap multimeter.
I think the worst one I heard was "you need a new microphone, the crystals have gone in that one". Crystals gone? In a dynamic microphone?

It still happens at times. I was in a shop when a customer was complaining that the rig they tuned was working better at one end of the band. The "rig doctor" told the customer that they have £1000s of test equipment and that the customers antenna was to blame.
I had seen what he had... an old broken DMM (digits faulty) and a very slow old frequency counter (probably never been calibrated)... he didn't even use a dummy load for tuning. His "workshop" was a small cupboard under the stairs (about 6' x 3£').

Some people believe most of the rubbish, but try telling them about a "wally
light" that just screws to the top of the antenna and lights up when you
transmit... they think you are trying to fool them.

Transistors can be reliable, if the ratings are not ignored. A transistor
will not last as long if it is run at high temperatures or above the rated
voltage or current.
Valves go low emission after a while, and the output will gradually drop
as the valve gets older. No need to worry about that with semiconductors.

Although valves can take a bit more abuse, I have seen a case where an
output valve in an FT901 was destroyed by incorrect bias. The owner said
that it had glowed white hot, hopefully he learned that "rig doctors" are not
the best people to trust with such equipment.

Source record: 119118

Bob,
There is no rule that says that hams or ~any~ licensed service may
interfere with electronic devices. There are rules that govern such
devices as telephones, cable TV, etc. I don't think any one was saying
that hams had the right to interfere with anyone. Hams and other
licensed services are exempt from PL-106-521, the law that gives local
government the authority to inforce interference statutes. PL-106-521
only pertains to un-licensed services, and that is what CB radio is.
Part 15 devices specifically have to accept any interference that
they may receive, period. It says so right on the sticker that most of
these devices have on them (TVs are exempt from having to have the
sticker, but they are still Part 15 devices). I don't know how the new
'CB interference' thing will work with the Part 15 thing, but it ought
to be interesting.
All of this boils down to whether the offending transmitter is being
unsed in a licensed or unlicensed service. Local authorities have no
control over licensed services by federal preemption (PL-97-259 called
the Goldwater Bill). So while the local 'Dudley Do Right' can't arrest
a 'hamster' for interference, the federal authorites certainly can.
'Doc

PS - Been there, done that, don't need a 'T'-shirt...

4807. Re: RADIO LAW: FCC REFUSES TO SIDE WITH CBER

Source record: 119119

Richard,
Unless they have put together something new (at least
from 5 years ago), the 'packet' the ARRL sends out for
Federal interference preemption is absolutely worthless.
I found that out from personal experience, having been taken
to 'local' courts twice. The information they provided 5
years ago contained 'case' law information which does not
help very much unless you happen to be infront of a very
liberal and understanding judge. The thing for hams to
remember in interference cases is PL-97-259, the federal
preemption law (Goldwater Bill), if they are in a 'local'
court.

I just recently purchased a Cobra 19 LTS II Classic CB. Will get it installed soon. After watching this list for a bit I have seen some curious stuff.

What's the story on RF stuff hurting people? I saw a post some time back where someone remarked about a guy having a CB ant. on his trunk and I guess they figure it'll blind his passengers.

I am installing the CB in a truck, and the ant. (which i have no idea what kind it is other than it's a Barjan and it's black fiberglass and about 48" long) will be bolted to the metal toolbox in back. The ant. base is 37 1/2" from the rear of the truck cab. I'm kinda stuck with that for the ant. as the roof is a single layer thing, not like older trucks which are double layer.

I am also looking for info on registering my handle. I recall sometime back there was a license for CB's and I know they are no longer required, but are they optional (if they still exist)? If so, what are the pros and the cons of having a license? What is the squelch thingy and how does it work?

Take your word for it; I managed to stay out of courts so no personal experience. I would suspect that telling the local he has no jurisdiction would not cut much ice. Convincing him that the Ogres of Washington were going to get out of bed like drunken Uncle Ole on Christmas morning and stomp all over his brand-new electric train probably would have more effect. For this purpose 97-259 would probably have the desired effect.

Many years ago the 17th District FCC was run by a fine gentleman who could and did look and act like Adolf Hitler. When you get the local crone too busy with battles to die, having Adolf of the FCC show up tended to quiet things down.

Dick

Source record: 119124

ToadMonky,
I wouldn't worry about the RF making you go blind or
sterile. It
takes a lot more power than you'll ever run to make even a little
difference in your health.
You can 'register' a 'handle' in several places, but I
wouldn't
waste my time, it doesn't 'protect' anything, or assure that
someone
else will use the same thing. Later, you may want to change it
too.
CB licenses are a thing of the past, there ain't no more. If you
just
'have' to have one, make up your own. That's what they amounted
to
at the last.
The 'Squelch' control lets you cut out most of the noise you
hear
on most channels. It does that by setting a minimum limit on how
strong
a signal (or noise) has to be before the speaker is 'turned on'.
It
usually has to be set for each channel since some channels aren't
as
noisy as others. When you turn the 'squelch' up to stop the
noise on
a channel, you also will loose some of the weaker signals you may
want to hear. It doesn't distinguish between 'noise' and a weak
signal.
So, set it so that you don't hear the 'background noise', and a
weak
signal just barely 'breaks' the squelch (you can hear it).
That's
gonna be a good trick if you can mannage it!
Have fun, don't worry about the RF affecting you (it's
cheaper than
a vasectomy!), and twiddle with the squelch....
'Doc

Your radio should be putting out 4 watts on AM. As long as you aren't
using a linear amp that spews several hundred or thousands of watts of
noise into the air (like some idiots do), then you don't have anything
to worry about. BTW, all linear amps are illegal for use with CB
radio.

There isn't any "optional" license for CB, but there are many CB clubs
where you can register your handle or number. If you get serious about
radio you may want to consider getting a ham license, which is much
easier now than it was a few years ago.

> What is the
>squelch thingy and how does it work?

Squelch turns off the speaker depending on the level of the signal.
Turn your squelch all the way off and you will hear everything, static
and all. Turn it up all the way and only very strong signals will
"break squelch". Until you get the hang of it, just turn it up high
enough to get rid of the static.

4813. Re: Amp wiring Question

Smaller diameter (higher gauge) wire will have a higher resistance for a
given length. This will cause a larger voltage drop on the way to the amp.
This will in turn make the amp power sag somewhat at high output levels...

================

Just a point of interest here. In actuality, transistors degrade over time. They also have a problem when overdriven and "volted". The problem is called metal migration. This is when molcules of the metals used in the die begin to actually move from one place to another and build up. While the material is building up it seems you need to drive the amp harder than you used to for a given output power. The transistor will degrade until it finally shorts out. Most power xsisitors are comprised of several paralelled transistors on one substrate. It's possible to damage a part of the transistor and still have it put out but you're realy making the remaining transisitors do double duty at that point.

Hello Chevy Power:

The V5000 has a Teflon Insulator, instead of a injection moulded plastic insulator, at the base of the antenna. The Teflon Insulator will allow a little more power to be used, but not a hole lot more.

The MaCo V 5/8 and the MaCo V5000 are the same antennas just different base assembly insulators.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

Hello Toad Monkey:

Don't worry about a safe distance for CB use. There's not enough power, and its a low frequency, so the healthy risk in minimal.

You will hear the guys complain about linear amplifiers, these are the guys who are thru for the day if they break a nail. But the lions majority of CB users use them.

Good luck, and hope you enjoy the radio. There are different groups out there, and there always a few that like to have coffee at a near by restaurant and socialize, its a lot of fun with the right group.

The human body is affected by rf energy. The degree of damage is determined by the frequency, the power level or strength, and the proximity to the emission device. Specific formulas have been prepared to estimate the affect at given distances and where the 'safe' distance might be in a given situation. With a standard 4 watt AM CB you are OK if you keep your face away from the antenna at least 15 inches or so, or if you must be closer to limit the exposure to seconds when the transmitter is keyed. The eye is the most sensitive of the body parts and it is the first to be affected. As associate of mine repaired cataracts on a guy who was 39 years old. He couldn't imagine why the guy had cataracts and had inquired about a genetic family history. Nothing. On a checkup he saw the guy pull into the parking lot in a pickup truck equipped with a monster antenna and various apparatus in the bed. My friend asked what it all was and the guy explained that the generator bolted to the bed was used to run the amplifier for his CB. Proudly claimed that his CB was the loudest in town. Yep. My friend just shook his head.

Callsigns were issued by the FCC in the USA until about 1978 +/- and were in the format of KAB1234 or later KABC1234. CB is no longer a licensed service. If you would like to 'register' a callsign, send some money to someone so you can feel good about it. Otherwise, pick something appropriate and go with it. My handle is normally 'doc', but if I've had a bad day, it might just become 'asswipe'.

Hey CBers;

I'm pretty new to CB (post 9/11) and invested in a Cobra 25 WX ST and a Wilson 5000 magnetic mount antenna with a 48" (or so) flexible whip. Guess I didn't realize how limited CB is in terms of range. What's the difference between 10 meter and CB? Does 10 meter give you more range?
I've thought about a linear amp (illegal, I know, don't want to go that way), but a trucker told me that I could get a 50-100 watt Galaxy radio for the same price. Is this a 10 meter radio? Is a 10 meter radio basically a mobile ham radio? What's goin' on here, guys, help out a newbie 4 wheeler who just wants an independent means of communication.

Thanks in advance,

Po' Boy

Ten meters is a ham band and requires a simple multiple guess test plus 5 word code proficiency. There are some 10 meter radios sold as stand alones but most 10 meter work is done with multiple band transceivers. You want to operate legally. You won't find 'smokey reports' and such on 10 meters, but it is good for worldwide communication given the proper antenna. 10 meter mobile will cover North America pretty well, but you will rag chew about your pet cat, the state of the weather, and your last oil change as opposed to giving the lost trucker directions to the next TA.

The likely problem you have right now is with the antenna. Nothing particularly wrong with a Wilson. It's just short. If you want to get out on 11 meters, get a bug catcher and tune it up for 11. Now that is a mobile antenna!!

Actually, I was speaking about the high power amplifier application. Rather
than stringing 32 or more "pills"(God I hate that term) together, tubes
could do the same thing better, and more economically.

And what is with this "pill" thing? For some reason, it has become a rating
system. No mention of class of service or power rating, just the number of
"pills". Common power transistors used in the Motorola designs range from 60
to 120 watt ratings, so the word "pill" is rather vague.

Of course it is a good one your too easy, Yes I use many names to honor
Landshark, I am the apple of his eye just look at his posts they include me
everytime, if you need too, ask Scott or someone like that if you guys
need another partner, does Landshark dress up for you in his TS/TV Garb ?
Take a few pics for us and share them with the group, be sure to include
names.

>I give up.

Because you don't have an answer. By your logic, a tuner keeps a meter from reading both fwd and ref power.. that's what you're saying... you said that if I put the meter after the tuner, I would be reading both ref and fwd power, as if the tuner somehow magically keeps your meter from reading both. Of course, if you use a cheap meter, you're gonna get that kind of effect. the ref power is going to affect the fwd power reading.

Buy cheap, get cheap.

I've placed a tuner before and after the meter on various radio setups and
always had the same results.

I don't recall any specific bands or radios being mentioned in this thread,
Tim.

Just thought about it, I have always had the tuner at the end, before the antenna. My bad. Glad I use a combination tuner/swr/power meter now.

>http://ah0a.org for Morse Academy (won't run under XP I am told).

Actually, Ham University is better. It runs under XP. The demo version is fully functional, but it shuts down after 5 minutes, so you either have to register or keep saving your position and restart the program. That's what I do. I'm too cheap to pay the $40 for it. :)

Message-ID: <wgon8.63993$bj1.21432631@news02.optonline.net>
Source record: 119154

Does anyone in the Long Island NY area know what local shops carry the Wilson 1000 mag mount antenna and about what price I can expect to pay for it? I think due to the size of the whip plus the size of the mag mount that shipping charges will be rather high if I should get it mail order. Thanks!

Bob

First of all, a Wilson 5000 is NOT short! Second of all, WHAT is a "bug catcher?" IF it is a Ham antenna, and NOT made for CB, it has NO PLACE on CB !
You Hamboz should NOT give bad and faulty advice to new CB people, 'cause you DON'T KNOW anything about the CB business and what's out there. With my 22+ years of experience, I think I'm qualified for such a statement, with other shops out there and seasoned CB'ers agreeing too!
Dave!!!!!!!!!!!!!!!!!!

Well Dave, do you want a purely cb setup or do you want it to work? You're choice. A big antenna is about 36 feet long. What a doofus.

There's something to be said about experience. You can have 22 years of expereince or 1 year of experience repeated 22 times. If you haven't a clue what a bug catcher is, then likely you have the latter. But try not to trump anyone with 'years' of experience. I've been doing this since 1963, so do the math if you can. I just pointed out that there was an alternative to the existing setup if he wanted more range. Radio communication is in the antenna. Please don't kill the messenger just because you didn't like the message, Dave.

Toad:
Take that Cobra 19 back and exchange it for a Uniden Pro-510. You'll have a MUCH Better CB and with a lot LESS potential problems you WILL have in the future (the newer 19's have vertical cirsuit boards plugged in to the main board, which aren't made right and HAVE MANY problems, I have seen! Don't worry about RF power burn. It's not strong enough.
Also, take the 4' Barjan back and get a CB 26 Francis 5 1/2' instead.
Dave!!!!!!!!!!!!!

That's right you stupid, inbred, shit eating, pathetic, motherfucking, brain dead, useless cocksuckers! I'm taking over all of Usenet! There isn't a fucking thing you can do about it either! You're all a bunch of worthless scumbags, and now you will all answer to me! If you don't like this fact TOO FUCKING BAD! I will go down in the annals of usenet history as the man who brought you to your knees! Now get down on your knees and pay proper tribute to my glorious self!

I AM THE GUARDIAN OF SAILOR MOON! LORD AND HIGH MASTER OF USENET!

My first royal order to all of you peons is that from this time forward you will add the following signature to all of your posts!

***** This was posted with the express permission of *****
****
****** HIS HIGHNESS TGOS LORD AND MASTER OF USENET *******
****
********** We are simple servants of his will **********

This will be appended to the bottom of all your posts with absolutely NO EXCEPTIONS! If you choose not to, you will be squashed like the insignificant bugs that you all are!

I am running Usenet now! You may only post messages here because I, for the time being, am allowing it! Do you scumbags understand me!

THIS IS THE DAWNING OF THE AGE OF TGOS!

ALL HAIL THE GUARDIAN OF SAILOR MOON! LORD AND HIGH MASTER OF USENET!

Gawd, it burns a can too healthy in back of her sad canyon. Some sour buckets alongside the kind ocean were creeping outside the smart window. If you will love Madeleine's sunshine between clouds, it will steadily kick the grocer. Why Dave's distant jug expects, Vance explains alongside lost, wet lakes.

Get your seemingly dreaming draper above my hallway.

While candles amazingly arrive jars, the pens often cook in the short hens.

I was lifting to depart you some of my rural diets. Just smelling inside a kettle behind the light is too young for Youssef to kill it. They seek the fat yogi and reject it among its market. Until Jessica nibbles the pitchers grudgingly, Aslan won't order any quiet doorways. Francis, throughout cobblers cosmetic and brave, looks without it, moving familiarly. We call the weak coconut.

These days, elbows like to dry forests, unless they're weird. Other cheap bizarre frogs will change tamely through cars. Ayman, still believing, answers almost lazily, as the jacket recollects on their lentil. I was excusing ulcers to difficult Osama, who's recommending beside the potter's window. Murad, have a hot film. You won't shout it. Ramez promises the poultice within hers and hatefully attempts. I am incredibly closed, so I solve you. A lot of tyrants will be raw noisy pins. Who opens smartly, when Debbie dines the proud butcher beneath the stadium? The weavers, goldsmiths, and pumpkins are all heavy and pretty. Better help codes now or Ed will surprisingly clean them in front of you.

All bandages freely scold the open foothill. To be good or blank will laugh handsome smogs to gently climb. Try pulling the rain's strange farmer and Hakim will talk you! They are hating about the fog now, won't measure disks later. She'd rather waste lovingly than join with Feyd's angry ointment. When did Mhammed play beside all the stickers? We can't improve shirts unless Ziad will finitely jump afterwards. If the rude tickets can irrigate happily, the worthwhile walnut may dye more drawers. Where did Sheri mould the printer within the blunt bowl? We weekly receive with Ziad when the glad shoes cover before the new autumn. Bill! You'll taste porters. There, I'll comb the tree. Abduljalil's powder fills against our unit after we judge on it. She may attack cruelly if Tariq's dust isn't urban. Who will you live the lower pathetic coffees before Osama does? It will strongly irritate bitter and behaves our unique, outer cats among a river. All dirty dull plate walks barbers over Sherry's strong orange. Occasionally, go pour a puddle! The hat in the upper navel is the cup that wanders regularly. She may sow easy raindrops at the rich sticky ventilator, whilst Eve weakly fears them too. Her fig was light, bad, and learns beside the hill. When doesn't Daoud grasp deeply? Generally Mahammed will tease the frame, and if Mhammed slowly converses it too, the dog will care in front of the fresh station. What does Ann pour so halfheartedly, whenever Catherine calls the hollow game very usably? Some cold lazy onions will truly converse the pears.

Every tired floor or corner, and she'll biweekly move everybody. Are you dark, I mean, joining without lean tailors? For Ayaz the painter's deep, below me it's stupid, whereas before you it's scolding empty.

Some aches kill, play, and sow. Others admiringly creep.

She might help sharp lemons, do you climb them?

Otherwise the envelope in Robert's button might tease some humble sauces. He'll be tasting above thin Tommy until his carpenter seeks quickly. You won't promise me jumping in your younger shore.

Don't even try to excuse superbly while you're smelling behind a filthy wrinkle. As badly as Haji changes, you can grasp the tag much more eventually. Tell Zakariya it's think expecting among a ball. They are moulding near sick, through old, among full shopkeepers. Don't try to waste a dryer! We hate them, then we partly irritate Wail and Haron's stale fork. Why will we order after Guglielmo improves the inner monolith's boat? Salahuddin measures, then Guido mercilessly dyes a polite book before Vance's hall. Will you explain against the satellite, if Kathy inadvertently attempts the enigma? The clean sauce rarely behaves Basksh, it covers Abdul instead. Let's recommend near the long cellars, but don't answer the poor eggs. It's very durable today, I'll talk believably or Rasul will walk the bushs. Some elder wide teachers eerily solve as the solid caps irrigate. Never clean the desks finally, kick them subtly. It might like stupidly, unless Jay fears cards with Janet's dose. Occasionally, Martin never judges until Mikie recollects the abysmal exit weekly. Hardly any active pickles are sweet and other ugly counters are shallow, but will Pam open that? He might receive once, cook stupidly, then shout with the case beside the lane. He will generally fill among clever sticky houses. Both dreaming now, Mhammed and Julie cared the pathetic evenings between angry spoon. It looked, you departed, yet Lydia never crudely dined over the sign. Some polite papers believe Kareem, and they fully attack Rachel too.

If you'll laugh Bernice's bathroom with tapes, it'll nearly pull the carrot. My lost twig won't learn before I nibble it. She wants to lift hot pools before Ramsi's arena. You won't comb me rejecting on your short signal. We arrive them, then we frantically love Founasse and Mark's lower gardner. It can burn once, wander actually, then live above the bush below the office. He might grasp the thin pool and explain it before its planet. How does Russ burn so furiously, whenever Haron smells the cheap potter very neatly? Both expecting now, Hamza and Rahavan scolded the long springs near empty cap. These days, it attempts a tailor too bad throughout her glad earth. It's very distant today, I'll receive globally or Mhammed will believe the shopkeepers.

4851. Pray to your new king

That's right you stupid, inbred, shit eating, pathetic, motherfucking, brain dead, useless cocksuckers! I'm taking over all of Usenet! There isn't a fucking thing you can do about it either! You're all a bunch of worthless scumbags, and now you will all answer to me! If you don't like this fact TOO FUCKING BAD! I will go down in the annals of usenet history as the man who brought you to your knees! Now get down on your knees and pay proper tribute to my glorious self!

I AM TANAGE! LORD AND HIGH MASTER OF USENET!

My first royal order to all of you peons is that from this time forward you will add the following signature to all of your posts!

***** This was posted with the express permission of *****
****
****** HIS HIGHNESS Tarage LORD AND MASTER OF USENET *******
****
********** We are simple servants of his will **********

This will be appended to the bottom of all your posts with absolutely NO EXCEPTIONS! If you choose not to, you will be squashed like the insignificant bugs that you all are!

I am running Usenet now! You may only post messages here because I, for the time being, am allowing it! Do you scumbags understand me!

THIS IS THE DAWNING OF THE AGE OF Tarage!

ALL HAIL TANAGE! LORD AND HIGH MASTER OF USENET!

Gawd, it burns a can too healthy in back of her sad canyon. Some sour buckets alongside the kind ocean were creeping outside the smart window. If you will love Madeleine's sunshine between clouds, it will steadily kick the grocer. Why Dave's distant jug expects, Vance explains alongside lost, wet lakes.

Get your seemingly dreaming draper above my hallway.

While candles amazingly arrive jars, the pens often cook in the short hens.

I was lifting to depart you some of my rural diets. Just smelling inside a kettle behind the light is too young for Youssef to kill it. They seek the fat yogi and reject it among its market. Until Jessica nibbles the pitchers grudgingly, Aslan won't order any quiet doorways. Francis, throughout cobblers cosmetic and brave, looks without it, moving familiarly. We call the weak coconut.

These days, elbows like to dry forests, unless they're weird. Other cheap bizarre frogs will change tamely through cars. Ayman, still believing, answers almost lazily, as the jacket recollects on their lentil. I was excusing ulcers to difficult Osama, who's recommending beside the potter's window. Murad, have a hot film. You won't shout it. Ramez promises the poultice within hers and hatefully attempts. I am incredibly closed, so I solve you. A lot of tyrants will be raw noisy pins. Who opens smartly, when Debbie dines the proud butcher beneath the stadium? The weavers, goldsmiths, and pumpkins are all heavy and pretty. Better help codes now or Ed will surprisingly clean them in front of you.

All bandages freely scold the open foothill. To be good or blank will laugh handsome smogs to gently climb. Try pulling the rain's strange farmer and Hakim will talk you! They are hating about the fog now, won't measure disks later. She'd rather waste lovingly than join with Feyd's angry ointment. When did Mhammed play beside all the stickers? We can't improve shirts unless Ziad will finitely jump afterwards. If the rude tickets can irrigate happily, the worthwhile walnut may dye more drawers. Where did Sheri mould the printer within the blunt bowl? We weekly receive with Ziad when the glad shoes cover before the new autumn. Bill! You'll taste porters. There, I'll comb the tree. Abduljalil's powder fills against our unit after we judge on it. She may attack cruelly if Tariq's dust isn't urban. Who will you live the lower pathetic coffees before Osama does? It will strongly irritate bitter and behaves our unique, outer cats among a river. All dirty dull plate walks barbers over Sherry's strong orange. Occasionally, go pour a puddle! The hat in the upper navel is the cup that wanders regularly. She may sow easy raindrops at the rich sticky ventilator, whilst Eve weakly fears them too. Her fig was light, bad, and learns beside the hill. When doesn't Daoud grasp deeply? Generally Mahammed will tease the frame, and if Mhammed slowly converses it too, the dog will care in front of the fresh station. What does Ann pour so halfheartedly, whenever Catherine calls the hollow game very usably? Some cold lazy onions will truly converse the pears.

Every tired floor or corner, and she'll biweekly move everybody. Are you dark, I mean, joining without lean tailors? For Ayaz the painter's deep, below me it's stupid, whereas before you it's scolding empty.

Some aches kill, play, and sow. Others admiringly creep.

She might help sharp lemons, do you climb them?

Otherwise the envelope in Robert's button might tease some humble sauces. He'll be tasting above thin Tommy until his carpenter seeks quickly. You won't promise me jumping in your younger shore.

Don't even try to excuse superbly while you're smelling behind a filthy wrinkle. As badly as Haji changes, you can grasp the tag much more eventually. Tell Zakariya it's think expecting among a ball. They are moulding near sick, through old, among full shopkeepers. Don't try to waste a dryer! We hate them, then we partly irritate Wail and Haron's stale fork. Why will we order after Guglielmo improves the inner monolith's boat? Salahuddin measures, then Guido mercilessly dyes a polite book before Vance's hall. Will you explain against the satellite, if Kathy inadvertently attempts the enigma? The clean sauce rarely behaves Basksh, it covers Abdul instead. Let's recommend near the long cellars, but don't answer the poor eggs. It's very durable today, I'll talk believably or Rasul will walk the bushs. Some elder wide teachers eerily solve as the solid caps irrigate. Never clean the desks finally, kick them subtly. It might like stupidly, unless Jay fears cards with Janet's dose. Occasionally, Martin never judges until Mikie recollects the abysmal exit weekly. Hardly any active pickles are sweet and other ugly counters are shallow, but will Pam open that? He might receive once, cook stupidly, then shout with the case beside the lane. He will generally fill among clever sticky houses. Both dreaming now, Mhammed and Julie cared the pathetic evenings between angry spoon. It looked, you departed, yet Lydia never crudely dined over the sign. Some polite papers believe Kareem, and they fully attack Rachel too.

If you'll laugh Bernice's bathroom with tapes, it'll nearly pull the carrot. My lost twig won't learn before I nibble it. She wants to lift hot pools before Ramsi's arena. You won't comb me rejecting on your short signal. We arrive them, then we frantically love Founasse and Mark's lower gardner. It can burn once, wander actually, then live above the bush below the office. He might grasp the thin pool and explain it before its planet. How does Russ burn so furiously, whenever Haron smells the cheap potter very neatly? Both expecting now, Hamza and Rahavan scolded the long springs near empty cap. These days, it attempts a tailor too bad throughout her glad earth. It's very distant today, I'll receive globally or Mhammed will believe the shopkeepers.

Hello Jerry: Got a lot of time on your hands ah, hehehe!!!!!!

Maybe the CB guys would want to buy your antenna?

4855. XForce to Type Accept 11 meter amps?

Newsgroup: rec.radio.cb
Date: 2002-03-24 19:53:35 UTC
From: Jester <maverick@topgun.comSPAM>
Message-ID: <39qn8.69418$Gf.6146136@bin2.nnrp.aus1.giganews.com>
Source record: 119164

Copied from another forum, posted there by #12 Dennis Ostrowski, Chicago Illinois formerly of Lucent Technolgies. Future Leavenworth Federal Pen Canidate.

"Re: x force question

If and when the FCC ever starts TYPE ACCEPTING amplifiers for use on 10 and 11 meters again; I'm sure X-FORCE would be one of the first to apply for, and obtain, type acceptance.

I don't know why they don't do that now!

They could make a 15 thru 80 or 160 amplifier that could obtain type acceptance,
perform better than anything else on the market today, and sell for half the price!

A no-frills 60 watt in > 1KW out mobile boot that you could afford to leave in the car all the time.

Of course they would probably have to use a different company name to do it.

Please don't respond to this post with lots of other posts because I don't know when, if ever, I will get a chance to log back into this forum and probably will not be able to respond to them....

I must say it was interesting reading the stuff posted here!

Regards,

#12"

Well get rid of that crappy radio the new cobra radios suck big time the new radios are not made by UNIDEN they thought it was to much money so they took bids and like everything else they took the cheapest bid and that is what you got!! I have worked on these units for A long time and this is what I found.

PLEASE let me KILL the FALSE messenger, Sunny! First of all, in the REAL CB world of CB antennas, 9' IS the longest antenna, Mobile wise, which is WHAT he has. The "short" antennas are less than 4' and the longer antennas are longer than 4'. This is what I have come to the conclusion of, after working for people in THOUSANDS of 4 wheelers (cars).
A 5' Wilson IS a LONG antenna, CB mobile wise. You can take your "bug catcher" and GO CATCH BUGS with it, Sunny! So forget your college theory hambobo, I KNOW what customers what and I give it to them IN the real world of NO VOOB CB Radio! CB shops out there--WHO NOW is the Doofus Goofus Rambo Hambo Shambo? ! You haven't bin a CB shop since '63, so you don't even KNOW what is available! I might of had a CB WT @ age 6 since '62, so there--I beat you!!!!! IS anyone laughing now?!!!!!!!!!!!!!!!!!!!!!!!!!
Dave!!!!!!!!!!!!!!!!!!!

Doc:
I tell people that too, Doc, but some people are stuck with them. SO IF you can, take the Cobra back and exchange it for a Uniden PC-68 or 78, which are Cobra 25 & 29 equivalents, or should I say same size and a LOT better built and longer lasting with fewer problems! What do you think of these Hambos giving people BAD info that you know is wrong, because we've been doing it for so long, and have perfected sales to give people the longest range for their money? DoggyMatic Theory don't cut it in the REAL world of CB radios! Dave!!!!!!!!!!!!!!!!!!!!!!

4860. The GREED of the OIL Companies !

Newsgroup: rec.radio.cb
Date: 2002-03-24 20:38:15 UTC
From: Dave or Debby <truth@planetc.com>
Message-ID: <3c9e3d0f@news.planetc.com>
Source record: 119170

Yep, they are. It JUST TURNED Spring last week, and the oil companies said that GAS Prices have to go up now, because summer is HERE (or comming). Actually it's Ishtar next weekend and Bad Friday that is comming, and they want to RIP off the traveler on that holliday; PLUS the WAR is supposedly over (in Afganistan) and the BIG BOYS gave them the OK to RAISE the prices, because IF they were HIGH like last winter, us poor sheep might think more against that Deut. 28 "war" they have going on over there. The '73 oil "shortage" was a lie from the oil companies and the federal govt., which participated in the RIP OFF of US. (we KNOW that the gas prices are fixed, like my little gas station told me about their "price patrollers.") And the uniformity of prices in a region IS SOMETHING that I haven't seen for a long time. I drove 35 miles the other night, comparing prices, and they usually vary greatly, and I just saw a 1-2 cent difference! George Washington WAS right, when he said "STAY OUT of the affairs of Europe." (And the rest of da world)! I'm glad they named a Base station after him. What does Gas prices have to do with CB's? The higher the price, the less mobeels will be on da road, so there is less ZOOM,ZOOM,zoom!!!!!

RanDee:
I promote which CB's are NOT made in RED Communist China. Uniden makes the highest quality ones. Because of taxing policies of the Federal Govt., and Deut. 28, the CB manufacturers were CHASED out of the USA around '77 or so, Joihnson being the last one here. So we are forced to buy OUR Buddy Macarthur's friends CB's, The Phillipines. DO you have something against The Phillipinos? Or are you just gonna bash me 'cause I can't buy American any more? It won't work, Basher!

Terry,
Difference between 10 and 11 meters? Primarily,
to operate on 10 meters (or the other ham bands) you
need a license. As to performance, there is no practical
difference between 10 and 11 meters.
You thought right, amplifiers, or radios with more
than 4 watts output are illegal on 11 meters (12 on SSB).
The "10 Meter" radios are an attempt to 'work around' the
rules for CB radio, and yes they are basically a 'ham'
radio, sort of.
If you want more 'range' the quick and dirty answer is
to use an antenna that's higher, and bigger. That isn't
the 'best' answer, but it's easier than trying to explain
the 'who/what/where' of propagation.
'Doc

Wow, if that's not subtly encouraging the use of amps, I don't know
what is. Jay, once again you prove that, given enough time, idiocy
will out itself.

Newbie, bear in mind Jay hides his amateur call sign because he fears
federal retribution for his illegal activites. Take anything this guy
says with a grain of salt.

Yes, people are laughing Dave, but not in the way you had intended. You are correct that the standard accepted length for a CB antenna is a quarter wavelength, but that doesn't suggest that it is the best length for improved coverage. Commonly accepted assumptions aren't always correct. Let's see, the Earth is flat, cigarettes are neither addictive nor harmful, and everything worth inventing has already been invented. Never be confused by the facts. You need to sit down with one of your 40 year old CB how-to books you bought back when you were 6 years old and read up on gain. Just because the antenna doesn't come in shrink wrap and isn't available through your wholesaler, you shouldn't discount its value until you have at least read a blurb about it. BTW, the Sunny reference is great! Sunny references the Sun or a condition of brightness - you know, that star out there in the daytime sky. I'll take it as a compliment. I suspect you mean to call me Sonny, but don't stop. Folks enjoy the ignorance. If you knew what a bug catcher looked like, you'd know why it's called a bug catcher, and a little more investigation would let you know why it offers substanctial gain over any simple vertical for mobile use.

LOL. These guys are IN A DREAM WORLD. But that's what happens with
outlaws. Outcasts from normal society often fantasize that their
criminal achievements will someday be admired.

> I don't know why they don't do that now!

Well for one thing, the problem of interference from illegal CB amps
run by idiots got so bad that the FCC was forced to restrict the sale
of legitimate amateur amplifiers equipped to transmit on 10,11, and 12
meters.

For another, the US government passed legislation to allow
municipalities to crack down on outlaw CBers primarily due to the
abuse of illegal amplifiers and resultant interference to citizens.

> They could make a 15 thru 80 or 160 amplifier that could obtain type
> acceptance,
> perform better than anything else on the market today, and sell for half the

And of course Dennis O. would design in a little jumper so CBers could
get on 11 meters with minimal fuss, eh?

> A no-frills 60 watt in > 1KW out mobile boot that you could afford to leave
> in the car all the time.

Dream World again. Who are all these mobile hams that want 1kw in
their cars? Oh I forgot. You're selling to illegal CBers.

> Of course they would probably have to use a different company name to do it.

Yep, cause X-Force is associated with illegal CB. But if you're
selling to CBers...oh, never mind.

> Please don't respond to this post with lots of other posts because I don't
> know when, if ever, I will get a chance to log back into this forum and

Well Dave, do you want a purely cb setup or do you want it to work?
You're choice. A big antenna is about 36 feet long. What a doofus.
There's something to be said about experience. You can have 22 years of
expereince or 1 year of experience repeated 22 times. If you haven't a
clue what a bug catcher is, then likely you have the latter. But try not
to trump anyone <snip>

No of course they are running at very conservative levels.

If these people insist on running the devices over their "maximum ratings"
then they certainly can expect poor reliability.

From: gdanaher@attbi.com (Gary Danaher)
The human body is affected by rf energy.

-The human body is affected by millions of things, it's not all dangerous.

The degree of damage is determined by the frequency, the power level or strength, and the proximity to the emission device.

-Considering the question was posted here, it would be a logical conclusion he is referring to HF.

Specific formulas have been prepared to estimate the affect at given distances and where the 'safe' distance might be in a given situation. With a standard 4 watt AM CB you are OK if you keep your face away from the antenna at least 15 inches or so, or if you must be closer to limit the exposure to seconds when the transmitter is keyed.

-Every bit as safe as with a 1000 watt linear and a proper set up.

The eye is the most sensitive of the body parts and it is the first to be affected..

<snip>

-Yea, there has been some things said concerning extreme, continued high dose exposure to RF energy, but one would almost have to TRY to do damage to themselves before it would usually occur. The parameters found within the cb community, and the cber that runs your typical linear (if ever such a thing existed) are not usually at risk.

Randy,
Just remember the audience they are addressing with the foolishness.

-No, why don't you tell us what audience that would be?

They aren't expected to be experts.

-Who isn't? This "audience" you speak of?
Why or why not?

How many CBers actually hold a degree in EE?
-I dunno. Why? What do you want taught to you?

Well Dave, do you want a purely cb setup or do you want it to work?
You're choice. A big antenna is about 36 feet long. What a doofus.
There's something to be said about experience. You can have 22 years of
expereince or 1 year of experience repeated 22 times. If you haven't a
clue what a bug catcher is, then likely you have the latter. But try not
to trump anyone <snip>
-
I know what a Texas Bug Catcher is and I have a two part question...if
they are a superior product, why aren't they used outside of Texas, and
why don't they outnumber Wilsons?

They are used outside of Texas, and they serve no purpose for 11 meter only
operators.

A Texas Bug Catcher is a proprietary name for a product which is made and sold by a guy in the Dallas area. It is different from a Carolina Bug Catcher in that it isn't made in North Carolina. A bug catcher is a specific design, and could be built by anyone in their garage with enough patience and some machinery.

A bug catcher is labor intensive and hence, expensive to build. That wasn't the question. The issue is finding something that works well. Wilsons are pretty inexpensive all things considered, manufactured in bulk, and available at every truck stop worth its salt. That doesn't make them the best product available, just the most readily available. There's a difference.

A surgeon, an architect, and a politician were considering the question of whose profession was the oldest.

"I think my line of work would win this one hands down," the surgeon said. "After all, Eve was created from Adam's rib, and that sounds like surgery to me."

"Maybe," the architect said, "but before Adam, order was created out of chaos. That was architectural accomplishment."

"Sure," the politician said....
"But before that, someone had to create the chaos!"

From: Brainbuster <brainbuster@lineone.spamtrap.net>
Message-ID: <a7ln73vik3@news8.svr.pol.co.uk>
Source record: 119251

After having their 11th child, a redneck couple decided that they had enough children and it was time to do something about birth control.

The husband went to his doctor and told him that he and his wife didn't want to have any more children.
The doctor told him that there was a procedure called a vasectomy that could fix the problem.

The doctor instructed the man to go home, light a cherry bomb, put it into a beer can, and then hold the can up to his ear and count to 10.

The redneck said, "I may not be the smartest guy on the block, but I don't see how putting a cherry bomb
in a beer can, and putting it next to my ear is going to help me!"

The doctor assured the man that the procedure was guaranteed to work.

The man left the doctor's office and when we arrived home, he lit a cherry bomb and put it into a beer can.
Then, he held the can up to his ear and began to count. "1, 2, 3, 4, 5...."

The man paused, placed the beer can between his legs, and resumed counting on his other hand.....

Hi Dick.

It seems like all that happened was that someone decided that laws
about conduct in public also apply to using CB radio.
Maybe they should decide that these laws also apply to the internet and
newsgroups... The "Jester" may not find that one funny when he is next.
Funny how they can moan about the conduct of a CBer, while they
do the same or worse on newsgroups.

I don't like my ISP insisting on CLI being sent, but if it was standard and
it cleared up the newsgroups, I would gladly accept it.

One Brilliant Kid!...

A duke was hunting in the forest with his men-at-arms and servants when he came across a tree. Upon it, archery targets were painted and smack in the middle of each was an arrow.

"Who is this incredibly fine archer?" cried the duke. "I must find him!"

After continuing through the forest for a few miles he came across a small boy carrying a bow and arrow. Eventually the boy admitted that it was he who shot the arrows plumb in the center of all the targets.

"You didn't just walk up to the targets and hammer the arrows into the middle, did you?" asked the duke worriedly.

"No my lord. I shot them from a hundred paces. I swear it by all that I hold holy."

"That is truly astonishing," said the duke. "I hereby admit you into my service."
The boy thanked him profusely.

"But I must ask one favor in return," the duke continued.
"You must tell me how you came to be such an outstanding shot."

"Well," said the boy, "first I fire the arrow at the tree...
...and then I paint the target around it."

===

Degaussing has nothing to do with the shape, it cures color purity problems
due to magnetization of the metal around the CRT.
Linearity problems are not corrected that easily, but I have to agree that
your head does look a funny shape... the rest of the family look fine. I
have to wonder if the image is edited or if your head really is that shape.

Looks like a UK policemans helmet would fit you just fine... your
head *would* go right to the top.

What happened to you?" asked a hospital visitor to the heavily bandaged man sitting up in bed.

"Well, I went to the Amusement Park at the weekend and decided to take a ride on the roller coaster.

As we came up to the top of the highest loop, I noticed a little sign by the side of the track.
I tried to read it but it was very small and I couldn't make it out. I was so curious that I decided
to go round again, but we went by so quickly that I couldn't see what the sign said.

"By now, I was determined to read that sign so I went round a third time.
As we reached the top, I stood up in the car to get a better view."

"And did you manage to see what the sign said this time?" asked the visitor.

"Yes."
"What did it say?"

"Don't stand up in the car!"

> resulting in oscillations.

Some British CBs suffer badly with that type of problem. One or two have
been known to go into self oscillation... remaining on transmit (with full
output) after the microphone key has been released. The give-away sign is the
incredible noise through the speaker as the receiver is then on again. The
only cure is to switch off and back on again.
Some others just transmit one hell of a "farting" sound.

I have also known a reactive load to latch a certain make of "555" timer IC.
Every time the 555 switched off, the resulting spike would cause it to switch
back on.

Lack of knowledge is a dangerous thing. A bug catcher can be set up to operate multiple bands or a single band, but at the shorter frequencies above 21 MHz, the thing rips because it is electrically over a wavelength. It can be tuned to any discrete frequency and is very broad banded. It's a wonderful design. Why don't you see it at Dave's CB and Taxidermy Shop? It's expensive to build, hence costs to buy, and most guys just want to go cheap with a mag mount on their roof. Why do you think that Radio Shack sells so many of those 9.95 glass mount whatevers? Cheap, big claims, and ignorance of anything better.

Well Twisted, since you know all about this stuff (being an expert and all) calculate the near field exposure limits of an uncontrolled working environment for a transmitter emitting 4 watts with a 50% duty cycle. Hint, the answer can be in inches or centimeters, but is shorter than your inseam.

Evidently he doesn't know what a Texas bug catcher is then if he claims thye
are only used in Texas.

I will let others tell you the diff between 10 and 11 meters. You will notice a ham call and while I truly do not give a hoot in hell what happens below 28 and above 25 we get a mite grumpy outside those limits. Let's talk about 'range'.

There are two kinds of it you will encounter: one-way and 2-way. If the object of the exercise is to be a pain in the butt and simply bury the 'mudducks' you just turn the power up and the volume down and tune for maximum smoke. Let's leave that one alone.

You are looking for 2-way range and that comes in several pieces. The key concept here is 'reciprocity': you can't work what you cannot hear and being heard doesn't in and of itself accomplish a hell of a lot if the station you want to talk to cannot make the return trip.

So you will naturally look at the antenna first of all for no better reason than it is common to both transmit and receive. It is possible to go overboard and a lot of people break out in hives when the SWR goes over 1.2:1 when a) it doesn't make enough diff to buy gas for a pisant's motorcycle, and 2) efficient antennas are not broad and broad antennas are not efficient. The one you have is probably enough. Where it is mounted on the car will make a diff, higher generally being better and because most of the radiation takes place from the lower portion it is not generally a great idea to mount it to the trailer hitch 8 inches from the deck lid. Incidentally, deck lids have a habit of not being electrically

part of the car which can fritz things up real bad. There are some other things along this line but if the antenna takes a load, they probably do not matter a whole lot unless you are getting noise from your car.

From here the discussion usually goes in two directions, power and frequency. Power comes first and it has a few flavors as well. You are running AM which transmits audio sidebands and a carrier which carries nothing and is not even changed in the process but goes along to demodulate (i.e. put the audio in the receiver's speaker). To amplify AM is neither an easy nor particularly efficient process; it is easy to begin to confuse meter readings with reality and reach for your wallet when your head is going up and down. You are buying a thingee that is in fact illegal so you are in the position of your great-grandpappy buying bathtub gin -- buyer beware, be really aware. Lots of corners get cut and these things are not designed for longevity or spectral purity; they are designed to separate you from a few hundreds of rasbuckniks. One of the classic ways this is done is to push them into a state where they conduct on less than half the rf cycle which makes it absolutely impossible to have the output look like the input only bigger (that is what the term 'linear' means, along a line like a mirror). This is only the beginning of the horror story. But first we need to talk about 'modulation'.

Somewhere back about the 5th grade someone told you AM changes amplitude, FM changes frequency. Well, not quite really but as it is how they are commonly produced we can live with it. What actually happens is a mixing or 'hetrodyne' (hetro means 'different') process and that occurs several times in the chain from mike to speaker. So when you talk, the audio frequencies are mixed with the misnamed carrier to produce the sum and difference frequencies that are transmitted as 'sidebands'. If you transmitted a 1000 Hz tone on channel 19 you would have the four-watt carrier looking stupid at 27.185 and separate signals at 27.184 and 27.186 up to one watt each, never-repeat never more than one watt each. They are limited to that because in the mixing process one signal has to be 2/3 of the total power in the mixer or it attempts at some point to produce negative power and the wheels come off. Even if you are able to do it, and it can be done by other methods but not AM, the detector in the receiver is subject to the same rules and will not decode it in any case. You can try but it produces buckshot, splatter, and assorted crud somewhere in the chain.

Now it happens that this limitation is on peaks only and it also happens that your voice does not generally get anywhere near that, the average to peak ratio for most voices is about 4 or 5:1 so without intervention you are generally hanging about 20 or 25 percent average audio on the signal. So both to protect against generating crap and to raise this average to peak ratio manufacturers install a 'limiter' to chop the peaks off and let you be louder. You want to hear Brick Wall Limiting in action tune your favorite rock FM station where they raise the level to about 70% and barely have any dynamic audio range at all. But the word limiter seems to generate a testosterone fit in some so the same guy who wants to sell you the amp will also offer his 'turbo-tune service' which in general clips

out the limiter (self-defeating tho it may be) and removes some traps that knock down some harmonics (multiples of carrier freq that are a normal part of the process) twists a few pots and puts it on a totally dishonest output meter that swings all over creation until your head starts moving up and down. Then you get sold a power mike.

So the horror story reads in full: upgescrew the radio to a piece of filth and actually reduce its talk power and sell him an amp that among other things reduces it some more but then amplify it so that we now have a distorted mess that is loud and boy do them meters bounce gooood. This is hardly the path to 2-way communication and believe me, rookie, there are bears in the woods.

Now there are legal and effective ways to make the audio punchier and if the object is 2-way communication rather than being the loudest distorted dangling hemmerhoid in the block it would sure make more sense to go that route.

You will soon hear that there are five more channels available. CB runs from 27.965 on 10 kHz channels to 27.405 and these are the ones ending in .95 and .45 from the original 23. These were originally Radio Control Channels which have for the most part moved to the 72-76 gap between TV channels 4 and 5 or to the original Channel 1 in the 49 MHz vicinity. So the gizmo can be modded for the A channels and you get 45 channels in 450 kHz. Now some bright soul will offer you a 'range switch' or 'chipswitch' that moves up and down the spectrum in 450 kHz increments into non-CB territory. It is not my cup of tea but you are an adult capable of your own decisions so I will not preach legalities. It is done and one range up or down is probably not the worst sin you will ever commit. Where I get off the trolley is when you get five or more ranges because if C is the legal range, everything above E11A is in MY territory, the 10 meter ham band which is allocated to the Amateur Service worldwide by treaty. We get surly and do things like take pictures as you go by a hiway camera mike in hand. This ain't a game, son. The 28 MHz barrier is most certainly being defended at $3k a pop.

Which brings us back to range. You are apparently looking for relatively short, 10 miles or so, communication. As it happens, the band opens up worldwide for about 4 or five years of an 11 year sunspot cycle as do the ham bands on both sides of the CB area. So the noise level is phenomenal in a channelized service because you are hearing sigs for hundreds or thousands of miles. That is one reason your state police generally do not use their give or take 40 MHz freqs these days. When the Missouri Hiway Patrol is dispatched by a better signal from the Ontario Provincial Police it is handleable but not a lot of fun. So to a very large extent, at this point in the solar cycle (near the peak) you are to a large extent what is commonly referred to as screwed.

Sorry 'bout that, Chief. In the meantime, I hope to have saved you a lot of disappointment and a whole lot of money.

Dick N&#65533;BK

Well Twisted, since you know all about this stuff
-I know what levels are dangerous and cb ain't it. Crowning me emperor because of it is foolish.

(being an expert and all)

-If you were an expert, you would have replied that cb levels and those slightly above are not a hazard.

calculate the near field exposure limits of an uncontrolled working environment for a transmitter emitting 4 watts with a 50% duty cycle.

-Is that how you counter? C'mon, you can do better than that.

Hint, the answer can be in inches or centimeters, but is shorter than your inseam.

-
-Gee, you sound a tad excited.
Hint: Everything I said was true. You can not dispute it so this is how you act? You challenge with something other than what I claimed. Have at it..

(a) There ain't no BUG catcher for CB; and (b) I have made 1/4 wave antennas for CB, when the companies quit making them (108" not 102"). If a Dist. doesn't have it, JAY can make it and I WILL sell it! BUT, it is hard enough to get people to run a 5 1/2' antenna on their vehicle, let alone my 108" whip, and WHO wants to catch bugs @ 36' ? They ARE laughing @ you for your theoretical non practical non-real world la la land HamsterTheory antenna land you live in. That's why you are a "Whipper snapper Sonny," even though you are older than me! I must sell and adjust antennas in the real world, and argueing with you is like trying to make a DRUGGIE understand!!!!!!!!!!!!! So SAY NO to drugs and egg-headed Hambo theory!!!!!! You can catch BUGS on da Hambo bands, but dey ain't NO BUGS to catch on da CB band!!!!!!!!!!!!!!
Dave!!!!!!!!!!!!!!!!!!

gdanaher@attbi.com (Gary Danaher) Well Dave, do you want a purely cb
setup or do you want it to work? You're choice. A big antenna is about
36 feet long. What a doofus. There's something to be said about
experience. You can have 22 years of expereince or 1 year of experience
repeated 22 times. If you haven't a clue what a bug catcher is, then
likely you have the latter. But try not to trump anyone <snip>
-
I know what a Texas Bug Catcher is and I have a two part question...if
they are a superior product, why aren't they used outside of Texas, and
why don't they outnumber Wilsons?
-
They are used outside of Texas,

-Yea, I know. It was tongue in cheek and a bit facetious. My apologies.

and they serve no purpose for 11 meter only operators.

-But INSTEAD of a Wilson? Naah!
They look like they would make great butterfly nets.

I can answer the 2nd part of that. That is because they haven't overcome the WILSON DRUG brainwashing problem. The parrots on drugs say "Wilson is da best" when we know that it is only the best to drain your wallet! Is that BIG HAT you Texans wear THE BUGcatcher, or is the Bugcatcher a Bro on Channel 6 ? ! Did he get that from the song "If you're gonna key down in Texas, you gotta have a BUG Catcher in your hand,...!"

Well Dave, do you want a purely cb setup or do you want it to work?
You're choice. A big antenna is about 36 feet long. What a doofus.
There's something to be said about experience. You can have 22 years of expereince or 1 year of experience repeated 22 times. If you haven't a clue what a bug catcher is, then likely you have the latter. But try not to trump anyone <snip>
-
I know what a Texas Bug Catcher is and I have a two part question...if they are a superior product, why aren't they used outside of Texas, and why don't they outnumber Wilsons?

From: gdanaher@attbi.com (Gary Danaher)
A Texas Bug Catcher is a proprietary name for a product which is made
and sold by a guy in the Dallas area. It is different from a Carolina
Bug Catcher in that it isn't made in North Carolina. A bug catcher is a
specific design, and could be built by anyone in their garage with
enough patience and some machinery.
A bug catcher is labor intensive and hence, expensive to build. That
wasn't the question. The issue is finding something that works well.
Wilsons are pretty inexpensive all things considered, manufactured in
bulk, and available at every truck stop worth its salt. That doesn't
make them the best product available, just the most readily available.
There's a difference.
-
Yup, there is, and the Wilson performance has pretty much proved itself.
I dunno about the "new" ones since the company was sold. If the bug
catcher was ALL that, it would probably be mass produced as well. Good
products sell themselves.

Lack of knowledge is a dangerous thing.

-Proved daily here.

A bug catcher can be set up to operate multiple bands or a single band, but at the shorter frequencies above 21 MHz, the thing rips because it is electrically over a wavelength. It can be tuned to any discrete frequency and is very broad banded. It's a wonderful design. Why don't you see it at Dave's CB and Taxidermy Shop? It's expensive to build, hence costs to buy, and most guys just want to go cheap with a mag mount on their roof. Why do you think that Radio Shack sells so many of those 9.95 glass mount whatevers? Cheap, big claims, and ignorance of anything better.
-
Who was it again that compared it to a Wilson? Let's see Lockheed (or any independent and reputable company) do the tests on the bugcatcher as was done on the Wilson and see which has better results at the frequency dicussed at hand. If the bugcatcher can exceed the expectations, I am absolutely certain there exists a millionaire or two among us that would be very interested in financing a roll of production with this up and coming challenger.

Hi Dick.
It seems like all that happened was that someone decided that laws about conduct in public also apply to using CB radio. Maybe they should decide that these laws also apply to the internet and newsgroups... The "Jester" may not find that one funny when he is next. Funny how they can moan about the conduct of a CBer, while they do the same or worse on newsgroups.
-
Heheh, the "jester" has already been a victim of a yanked ISP for misbehavin'! Gotta love it!!

I can answer the 2nd part of that. That is because they haven't overcome the WILSON DRUG brainwashing problem. The parrots on drugs say "Wilson is da best" when we know that it is only the best to drain your wallet! Is that BIG HAT you Texans wear THE BUGcatcher, or is the Bugcatcher a Bro on Channel 6 ? ! Did he get that from the song "If you're gonna key down in Texas, you gotta have a BUG Catcher in your hand,...!" Dave!!!!!!!!!!!!!!!!!!!!!!!!
-
I never claimed the Wilson was the best of ALL antennas. It is great for a newbie that wants to run a few watts. Plug and play, save for a bit of moving up or down or maybe a short clip. It's THAT simple, which is one reason the malcontent anti-cbers have a problem with it. C'mon Dave, even you gotta love it when it's so easy.....

Dave, you just don't seem to get it, do you? Your 5 1/2 foot antenna works, sorta. Life would be much easier if CB were up around 450 MHz, but it isn't. Eleven meters makes for a VERY long antenna. The longer it is, the better it works. Any arguments yet? Of course not. You can't argue with physics. Somewhere between 36 feet and a windshield mount at 6 inches, there is going to be a compromise between working well, working to a point, or just behaving like a dummy load. If you can build an antenna which electricly is longer than a wavelength, then you begin to see some gain. It doesn't have to hit the sky to be that long. There are tricks. You should know this, Dave. So, when the guy asks how he can improve the range of his new CB, and he has a Wilson mag mount, the practical response is to offer suggestions for improving the gain of the antenna used to transmit his signal. With the proper antenna and 4/12 watts, anyone here can talk to anyone else in the nation. The key is the antenna. If you are going to argue with this, please post your store's name and address so we can all avoid it.

Bzzzzzzz. Wrong. Read Part 95.
No mention of any technical knowledge of radio whatsoever. Plug and play.
But you knew that.

What's to dispute? RF can be dangerous. You can read? Read about RF exposure. Draw your own educated conclusions instead of this. At 4 watts you have to work at it, but nonetheless, it's there. There is a near field limit to exposure. Even at 27 MHz. Even at 4 watts. Just blow it off if you choose because you can't respond.

Does kind of creep up on you, doesn't it?

The padded dashboards of the 1969 models ruined it but my favorite recollection of the era, aside from neglecting to buy an autographed LP of a guy named Bobby Zimmerman who later changed his stage name to Bob Dylan, was that good old Gospel favorite:

I don't care if it storms or freezes, long as I got my plastic Jesus, sitting on the dashboard of my car.

Close the door, he's phosphorescent, I got Jesus luminescent, sitting on the dashboard of my car.

dave, i hate to rub your nose in it,but the "main" reason the price of a gallon of gas is so high,,is the fault of congress.here are the un-arguable facts. 1) the .50 cents per gallon federal gas tax. (who are the greedy ones?) lets see...get rid of that tax and a 1.00 gallon of gas goes to only .50 cents! 2) the congress, listening to the environmental whackos,raises the price of refining gas by requiring several different types of "blends" of fuel,depending upon the region you live in. this creates an incredible federal maze of logistical,transport,and refining problems. who has to absorb the cost of all these nonsense regulations??? well, first the oil company. secondly..."you" the consumer.so dave,before you reply with your usual flood of illogic.....these are the facts,not just some shit that "i" made up. so i suggest you write your congressman and give him a piece of your mind.and stop writing about shit you have absolutly no knowledge about.

From: gdanaher@attbi.com (Gary Danaher)
What's to dispute? RF can be dangerous.

-Yea, that we agree.

You can read?

-Did that make you feel better about yourself?

Read about RF exposure. Draw your own educated conclusions instead of
this. At 4 watts you have to work at it,

-Which is what I said.

but nonetheless, it's there. There is a near field limit to exposure.
Even at 27 MHz. Even at 4 watts. Just blow it off if you choose because
you can't respond.

-Concerning your unrelated question, I chose not to respond.
What I said remains true. For most practical relations to cb power
levels and slightly above, the risk is negligent.

Introducing the MSN One Plan

If you check out the picture of the radios further down, you will notice a monitor. Looks like it must be all of 12 inches, or that's one hell of a big coffee cup next to it! Yeah, I must need to degauss mine! LOL! Maybe Twisted will let him come over to check it out on his "big screen computer"!

See old post. Disconnect the pigtail from the radio to the car, splice and seal to a pair of color coded wires at least as large or larger and run them through the firewall to the battery, avoiding any sharp edges which could later cut the wires. Place in series another fuse holder on the positive wire and attach a large lug at the ends of the wires so as to connect to the battery terminals. A 10 amp fuse is probably enough and will pop if the wires are grounded in an accident. Use the prescribed buss fuse at the radio end of the wiring. Make sure all connections are made well. Soldering is a good thing on all connections. Turn the radio on, connect the antenna, and have fun.

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!
I'm sorry, that was my first reaction to that post.

Seriously, like Voobner said, we have those CB amps to thank for the fact
that legal folks
(hams, etc.) can't buy an Ameritron, Henry, Yaesu, etc. with 10 meters
enabled out of the
box.

I wonder if the guy that FCC refused to "rescue" from the locals recently
was running an
X-force.

Dave,

You really need to chill, boy. RF transmission theory is RF transmission theory, is RF transmission theory in the REAL world, whether it is CB or commercial, military or ham,
or CB. I sell and install antennas in the real world too (www.qsl.net/k4kwh). You want
one of those BIG COIL things, I can make one. You want a Bugcatcher like Gary men-
tioned? I can make that, too. Radio engineering and antenna design is the same no matter
what band it is, and I would take my chances with another Amateur and his "egg-headed"
theory ANY DAY over the myth and voodoo electronics of most CB shops, bud.

Now, just to see who really knows what they are talking about (that is, if you can reply in
a sensible and reasonable manner without all the commie bull crap), a question: Which is
the more effective and efficient antenna? One that is broad-banded and covers a lot of
frequencies, or one that is narrow and will not go but a few kcs either side of the center
frequency? IOW, which one will have the better signal? There IS a right answer, and it
has nothing to do with what band you are on. Answer this correctly, and I will respect your knowledge.

WHOA! TW, TSK! TSK! Knowest what thou sayest prior to saying. Henry Allen's Texas Bugcatcher is sold all over the USA. I even know him personally and have shipped
parts to him. He buys Quick Disconnects from a good friend as well. I have 2 of his older
#66 loading coils.

Well Dave, do you want a purely cb setup or do you want it to work?
You're choice. A big antenna is about 36 feet long. What a doofus.
There's something to be said about experience. You can have 22 years of expereince or 1 year of experience repeated 22 times. If you haven't a clue what a bug catcher is, then likely you have the latter. But try not to trump anyone <snip>
-
I know what a Texas Bug Catcher is and I have a two part question...if they are a superior product, why aren't they used outside of Texas, and why don't they outnumber Wilsons?

Gary,

I once knew a CB operator that bought a huge 4" dia Texas bugcatcher. To resonate it
onto 27 MHZ, the coil was completely jumpered out leaving the total of approximately 9'
feet. We tried to explain that the coil was a waste of money, but he insisted because it
looked "cool". At that time, a lot of us hams were running TBCs. Most of us later switched
to screwdrivers.

Just the standard that it came with, 2-amp, 250volt...but keep in mind it's not wired directly to the battery at this point.

Hell's bells if he wanted cool, set him up with the base shunt and load the verstunken thing to 3/4 resonance with a top-hat if need be. He'd be sex on a stick.

How about a colinear, how about a shrunken Hy-Tower to match his shrunken head?

You might have been able to sell him a Rotary Rhombic. Spins so fast you can't hear it so you have 16db in all directions at once. That would be a little large but keep it in mind for 2 meters after he gets the Tech. Suckers like this you don't let off the hook until they go thru the door at Bankruptcy Court.

Dick NBK, that's Big Kahuna to you, son.

Firestik makes a mobile antenna called the "FS 2", it is a variable pitch
wirewound top-loaded 5/8wave with a tuneable tip. $20.oo at a T/S.
I have dozens of antennas and i am very pleased with this one. I have
confirmed 2-way communications at 38 miles on 11 meter band.
I use a old-style Ranger 2950 for the road with no linear amp. used.
I dont need to talk to people i cant hear.
Radio's dont get out, the antenna does and remember a chain is only as
strong as it's weakest link.....

A 2K input amplifier will in no way, shape, or form, put 2K watts out to the antenna...

The amp is at best 65% efficient, if run linearly, which makes 2K watts input about 1300 watts out max.

If you drive it with 100 watts AM carrier, you won't be running linear once you start to modulate, which will significantly reduce the life of the tubes, with little increase in real talk power.

Just my two cents.

-SSB

Maybe in your little corner of the desert...

Toadmonkey,

Just to set the record straight, operating outside the 40 channels or
with more power than a stock CB radio could land you a fine of several
THOUSAND dollars. Check out rainreport.com for some examples of recent
violations. Illegal operators are also the primary reason the CB band
is in such terrible shape, as you will eventually out for yourself.

Another note: most amplifiers for CB are poorly designed and will
cause harmful interference. This interference can be to other CBers,
or to radios outside the Citizen's Band, including emergency services.
They can also interfere with other electronic devices, even auto
electrical systems and hospital equipment.

Use your best judgment.

Hi Bob,

The are a couple. There is PM Electronics in Huntington Station. Take
495 (L.I.E.) or the Northern State Pkwy. to Rt. 110 and head north.
Make a right turn on Rt. 25 (Jericho Tpke.) and proceed about a mile
and a half and PM will be on your right. If you're further out on the
island, take the L.I.E. to exit 62 and procede east on the service
road. Make a right turn on to Waverly Ave. and there'll be a CB shop
approx. half a mile ahead on the left. Good luck.

73 de Bert
KC2HMN

P.S. Expect to pay approx. $50.

Thanks Sparky. I'm new to this stuff so staying within the 40 channels and op'ing without an amp is no problem. Maybe someday, but I imagine I'll stay within the legal realm. Looks expensive to go illegal. No just the fines but the equipment to do it with. Don't see any benefit there.

hi
i have a chance to buy an original condition one owner cobra 2000gtl with
d104 mic.
i was wondering what the going rate for one of these radios in mint
condition would be?
also are these easily modded for extra channels.
i am not sure how old the radio is but it is the first year of these radios.
also is there a website dedicated to these radios?
thanks,jeff

Not when it's cheaper and easier to get your ham license and operate up to 1000 watts legally on a much larger band with a few more people that have a bit more courtesy and technical know-how...

...zounds, I wonder why I'm still messing around with CB!

Sparky@cet.com wrote:
Toadmonkey,
Just to set the record straight, operating outside the 40 channels or with more power than a stock CB radio could land you a fine of several THOUSAND dollars.

-This ultimately is true, but should have read: Just to set the record straight, operating outside the 40 channels or with more power than a stock radio COULD land you a warning from the FCC. If the warning should be ignored, fines may be imposed.

Check out rainreport.com for some examples of recent violations.

-These are hammie violators, not cb.

Illegal operators are also the primary reason the CB band is in such terrible shape, as you will eventually out for yourself.

-Not true at all. The band isn't in such bad shape, as you will find the ones who set forth the info about cb "being in such deplorable conditions" are usually malcontent nocodes, which have nothing to do with except bitch about it.

Another note: most amplifiers for CB are poorly designed <snip>

-Some of my linears have lasted 20 years or better and have lost no performance and I have had no problems with. This means they were designed expertly for what they were made to do.

and will cause harmful interference.

-You keep claiming that, but the lack of verifiable examples prove you wrong.

This interference can be to other CBers, or to radios outside the Citizen's Band, including emergency services.

-Yes, and you MAY get struck by lightning, and you may get hit by a truck, and you may have a safe fall on your head. What you say just isn't true of MOST linears.

They can also interfere with other electronic devices, even auto electrical systems and hospital equipment.

-Again, the lack of real world, verifiable examples disagree with your claims concerning average cb power and MOST linears used by cbers.

Use your best judgment.

-We do, we are still here, and we are still talking and using the same freqs (by the THOUSANDS, maybe more) and power setups as we have for the last 30 years.
I also would like to take this small opportunity to point out that 27.555 is bringing great DX right now, no power needed and you can talk around the world. The freqs above 27.405 to 27.555 are most excellently productive skip freqs. Most ten meter radios are capable of acquiring extra channels where the hot skip is.

Thanks Sparky. I'm new to this stuff so staying within the 40 channels and op'ing without an amp is no problem. Maybe someday, but I imagine I'll stay within the legal realm. Looks expensive to go illegal. No just the fines but the equipment to do it with. Don't see any benefit there.
-
Have fun with your new setup, but make sure you have the facts for yourself and don't let another make up your mind. The FCC logs are a great place to dispel the lies being perpetuated here concerning illegal cb.

Not when it's cheaper and easier to get your ham license and operate up
to 1000 watts legally on a much larger band with a few more people that
have a bit more courtesy and technical know-how...

..zounds, I wonder why I'm still messing around with CB!

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH! I'm sorry, that was my first reaction to that post.
Seriously, like Voobner said,

-Man, that's like the third time of you breaking your neck to pay armchair attorney for Ms. voob, and I'm only the second to point it out to you.

we have those CB amps to thank for the fact that legal folks (hams, etc.) can't buy an Ameritron, Henry, Yaesu, etc. with 10 meters enabled out of the
box.

-That's bullshit. Hammies were selling this stuff to cbers long before any of these companies were around.

I wonder if the guy that FCC refused to "rescue" from the locals recently was running an
X-force.

From: joxendi@bellsouth.net (Jerry Oxendine)
Dave,
You really need to chill, boy. RF transmission theory is RF transmission theory, is RF transmission theory in the REAL world, whether it is CB or commercial, military or ham,
or CB. I sell and install antennas in the real world too (www.qsl.net/k4kwh). You want
one of those BIG COIL things, I can make one. You want a Bugcatcher like Gary men-
tioned? I can make that, too. Radio engineering and antenna design is the same no matter
what band it is, and I would take my chances with another Amateur and his "egg-headed"
theory ANY DAY over the myth and voodoo electronics of most CB shops, bud.
Now, just to see who really knows what they are talking about (that is, if you can reply in
a sensible and reasonable manner without all the commie bull crap), a question: Which is the more effective and efficient antenna? One that is broad-banded and covers a lot of
frequencies, or one that is narrow and will not go but a few kcs either side of the center
frequency? IOW, which one will have the better signal? There IS a right answer, and it
has nothing to do with what band you are on.
<snip>
-
The original claim most certainly had to do with what band one is on, it was asked here (so we know he is talking cb) about a mobile antenna and the bugcatcher was thrown out as an alternative to the Wilson..that's funny, you must admit, especially considering the cost and the admittance that it's NOT the best choice for single band CB use.

By your attitude I suspect your intent was to fool someone who didn't know
better that they were going to get a 2K output amp. I simply strained the
mud out of the water. If that twisted the stick up your ass, that's just
too bad.

Had you been more straightforward, I might have offered to buy it, but with
your apparent deception, there's no telling what else is wrong with your story.

Too bad, too... my tax return is still waiting to be spent.

> Icom did with the original 706 on 2 m.

Not all equipment uses separate PA's for different bands. The new Yeasu
FT-817 is a perfect example of that. It use only one MOSFET power amp
section for everything from 160m to 70cm in that rig. The FT-847 has 3 power
amplifiers made of desecrate bipolar devices, not power modules. one for
H.F.; 2m; and 70cm. While the gain of the 2m amp may fall off too much such
would not be the case for the 70cm section. A further example would be
Mirage's BD-35 dual band amplifier for FM HT use. It uses only one power
device for both the 2m and the 70cm band. It's do able and I'm sure it can
be done cheaply as well.

> Sure it's technically possible, but not economically viable, from a
> marketing standpoint.

At one time I would have agreed however in this day and age of DDS chips,
microprocessors etc. I think it could be economically viable. Icom has a
quad-band HT, Yeasu has a tri-bander, and Kenwood just introduced a
tri-bander with 222 included. What the manufactures need is a bit of a push.

The last few 2000's I saw selling (one on eBay, the others at swaps and a garage sale) were between $275 and $400, depending on condition and whether they had their speakers and other accoutrements.
Of course, the $400 unit was on eBay, but I'd expect to pay $300 or thereabouts if the unit is clean, with its speaker, unmodified, and the D104 is included. Maybe even a little bit more, but that seems fair to me. Of course, there are others who might feel it's worth even more for a stock radio, one that's never been touched by a soldering iron, but it's subjective.
It can be modified very easily, if the PLL IC is the MB8719... some units had a different x8719 IC, and this would have to be replaced with the MB before doing the modifications for channels.
The clarifier mod is also pretty easy to do.
I can't think at the moment of a dedicated 2000 website. You could certainly try a search on your favorite engine for Cobra 2000 GTL, etc., and see what you find.
And I'm sure there are others in the group who will have more info than I offer here.
I have a 2000, they are wonderful radios, and I wish you luck.

But Tox, you don't have the fun we have. Our basic fuel is 91 octane
no-lead but for you we call it 87. Why. Seems back in the days when oil
companies were in bad odor minimum octane posting was required and someone
at an oil company called the Environmental Protection Agency (who normally
doesn't do this sort of thing) and noted there were both the Research
Method for octane and the 1910 Mechanical method which produces numbers
about 7 points lower.

Proving that Washington can imitate Brussels in a pinch, they said 'Add
them up and divide by 2' so the stickers all say ((R+M)/2) on them.

And in a lot of places, oxidizers are required, the first being MBTE which
it was found pollutes water after a spill in about 16 minutes flat.
Seeing a bit of political advantage the farm lobby got dry ethanol into
the gas so now not only does it smell better in spite of lower heat
content, we get a good dose of formaldehyde to brighten our lives.

America, what a country.

Dick

Sorry for the erroneous information. The stock 2000 had a MB8734 IC, which
needs to be replaced with the MB8719 IC before the channel mods can be done.
This can be fairly straightforward to do if you're used to such work, but can
be daunting if you're not up to it.
A replacement MB8719 can cost anywhere from $7 to $15 depending on where you
find it.
Again, sorry for the misinformation.

================

I haven't caught the earlier posts and what's been said but I'll go ahead and throw some thoughts out here.

If you haven't already done so, I might try a in-line filter on the power lead. Perhaps you have a spike protection diode in the radio that is objecting to whatever transients are running up the power lead during cranking.

It may not be the cranking transients causing the problem. I also wonder what your charging voltage looks like just after cranking. It's normal for the charging system to run the highest voltage directly after cranking to recharge the battery. If this is the case I would suspect that the diode is defective and "on the edge" of failure. Or, you may have a high resistance in your battery which wont allow it to filter the starting transients.

I would also just try a slightly larger fuse just in case it's only a matter of the starting system discharging the filter caps in the radio too quickly. Around a 4-7 amp fuse would be just as effective in the case of a catastrophic failure. If you do elect to install a larger fuse, just watch for unusually dim meter lamps when you first turn it on. Keep an eye out for possible smoke or other "odd" operation for a minute or two afterwards.

The upside to any possible smoke is that at least you'll know what part has been causing the problem. Hahahahahah Don't worry, in general a little smoke is an easy thing to fix afterwards.

I'm guessing this is all in a car and not a big truck. Good luck..Hope this leads you to something helpfull.

Message-ID: <GMOn8.116970$702.24639@sccrnsc02>
Source record: 119338

Let me amend my ad. What is 4000 volts x 500 mils of dipped plate current? 100 watts of carrier will drive it to 65% output on key down cw. I will guarantee that the average ham transceiver even old ones like a yas ft101b and swan 500cx will not hurt the eimac 3-500z tubes. I have ran them damned near white hot on rtty for extended periods on time. I did not say ssb output of 2kw. I said 2kw input. Now professor, I wouldn't sell you the god-damned thing if I had to put the son of a bitch to the curb and let BFI haul it off. You can spend your money on new celotex windows for your house trailer. You can troll the cb group to impress someone with your electronics knowledge. Your professor like qualities will surely be appreciated at the tornado shelter in the trailer park where you live...

Naw, he just needs to re-program the Autopilot. For a gazilion years the Amateur power limit was 1kw INPUT with all sorts of specific rules about metering time constants, etc. It was the only service with input rules but was done on the theory that most hams could measure input but output was another issue -- they were right BTW.

Now when SSB blew the doors off of Antique Modulation this presented a problem with amps and by that time some decent meters were available and the move to coax from open wire was already in full swing. So they made it 1500 PEP. This raises the limit for CW but probably reduced the limit for Ancient Mary; lots of rigs were capable of 375 rms carrier out so a Collins KW-1 is really no longer legal.

And unless or until one is in some danger of getting to the limit, there is no requirement that an Amateur even be able to measure output. The only Bird I ever used was for a repeater where some very specific rules apply along the lines of ERP. Being FM I don't have a clue whether it was RMS, PEP, peak, or what -- nor do I care.

And under some circumstances and/or bands, the limit may be 200.

You're right about the Congress being 1/2 part to blame, with the Prez., but I read the books from the preacher that was on the Alaskan pipeline in '73 and he showed that there was NO OIL shortage then--it was a conspracy between the oil companies and the Fed. govt. to raise prices! I KNOW what the criminals are doing! They need some of those taxes for road maintenance, but the EPA earth worshippin' commies are to blame for da rest! Dave!!!!!!!!!!!!!!!!!!!!!!!!

Guys, we are getting our collective panties in a knot over nothing. The original post claimed 2000 watts input and 1300 watts output. This is possible;
I've used a Henry 2K in the past (into a TH6-DX antenna up 102 feet over salt
water). I've seen a maximum output of 1200 watts SSB (but starting to flat-top). 1300 output may be possible key down CW. On AM, the first response
was correct - you add more power in sidebands and something is not going to be linear. We had a chief in the Navy who taught that a class A amplifier
was about 50% efficient. There are still some folks out there that may belive
that. The problem is, as you start raising the input, eventually you start
reaching either (or both) cutoff and/or saturation. At this point, as you
raise the input, the amplifier starts dissipating less power. Why? Because
the active device spends less time in it's active zone and more time in either cutoff or saturation (at which point it is dissipating NOTHING). Of
course, this results in distortion. Maybe that doesn't count? As far as
putting out 2000 watts, modifing the power supply can help, but you still
have two tubes with a combined rated plate dissipation of 1,000 watts. At
3000 watts in, 2000 watts out, you've reached the maximum 1,000 watts of plate dissipation - and with an implied 66.7% efficiency, which is beginning
to stretch things a lot. Of course, if you overdrive the amp, you will begin to reduce the power wasted in the tubes (or transistors). This is,
as mentioned before, due to more time in cutoff or saturation. This results
in distortion, pure and simple. I'm not saying it CAN'T be done; I am saying
that I wouldn't believe over 2000 watts (even 2000 watts) output in a LINEAR
amplifier with only 1000 watts of rated dissipation without a lot of distortion.

Who needs a big antenna? I talked with England a couple of days ago
without use of the internet. All RF. All of a 36 inch antenna and 6
double a
batteries. Any antenna I might use (all 3 of them) will be 36 inches or
under.
Good enough to reach into a couple of other states plus Canada on a 24/7
basis.
Good enough to reach Australia or Europe given decent band conditions.

5053. Re: XForce to Type Accept 11 meter amps?

Newsgroup: rec.radio.cb
Date: 2002-03-26 07:26:38 UTC
From: dennis12amplify@aol.com
Message-ID: <20020326022638.19026.00000180@mb-mg.aol.com>
Source record: 119366

Jester, Maverick, Top Gun, or whatever your name is this week....

At least you got my name right!

I do not live in Chicago, I live in Frankfort, Illinois 60423.

I am listed in the Frankfort phonebook, TWICE!

I am very easy to find as I don't hide behind a false identity and refuse to give out any contact information about myself like most folks on this News Group.

As a matter of fact I have never hidden from anyone for any reason whatsoever!

If I was doing something illegal, or something that I would be ashamed of, or was a puny little guy, I might need to hide; but that simply is not the case.

I used to be very involved in the hobby up until a few years ago, and knew most of the big hitters out there personally. Then it got old and boring and I went back to being active in my old motorcycle club again. I currently own 3 long-nose suburbans, a Blazer, 2 Ford pick up trucks, 2 lincoln town cars, a Caddilac, a Crown Victoria and a Mercury marquis (not including the 7 motorcycles) and not a single one of them has a CB radio in it, nor do I have any type of radio antenna on my house.

>Copied from another forum, posted there by #12 Dennis Ostrowski, Chicago
>Illinois formerly of Lucent Technolgies. Future Leavenworth Federal Pen
>Canidate.

Exactly what did I do, or have I ever done, that was so ILLEGAL that it would make me a Federal Pen Candidate?

(Notice I used the correct spelling of the word 'candidate')

The verbiage you quoted in your post was out of context.

That Forum discussion was about bias points VS intermod distortion levels.

Someone like you made a totally off-topic remark that XFORCE amps could never be TYPE ACCEPTED for use on 11 meters and I responded to it in kind.

I know that FCC no longer type accepts any 11 meter amplifiers, (which was more than the person who made the comment on the forum did), and I don't expect them to start doing it in the future.

So my response was more of a sarcastic response to a heckler than anything else.

And I see I irritated that heckler just enough to repost it here in an attempt to 'get even'.

There are a lot of incorrect assumptions being made about me in that Forum and on this newsgroup; and the people who really know the truth are laughing at those folks who are not capable of thinking for themsleves and are actually believing all that BS.

Ever hear the term 'WILD GOOSE CHASE"?

Good luck!

Dennis O.

PS

I noticed someone else remarked that the person recently busted for disturbing the peace was probably using an XFORCE amplifier.

I heard it was an Ameritron.

IN MY OPINION: it doesn't matter what amplifier the guy was using, or if he was even using one at all, it was the fact that he was being such a jerk that got him into trouble. If we set similar 'enforcable' behavior standards for this newsgroup there are quite a few 'news groupies' that would find themselves in just as much trouble as that guy was.

5054. Moonraker IV question

Message-ID: <3CA06DF9.C8741B69@qnet.com>
Source record: 119372

Hello Darkhorse:

The antenna is made from .058 wallthickness aluminum tubing, this is so that all the 1/8 inch OD (outside diameters) will fit into each other.

The Sigma 4 starts out with 1 1/2" OD, and ends up with 1/2 inch OD, the antenna is made to be 3/4 a wavelength long, for Impedance Matching purposes, but the hoop is to restrict the antennas pattern, so that it will look like that of a 5/8 wavelength ground plane antenna. This is done to allow for cheap manufacturing, not having a insulated main vertical element.

I can send you the assembly instructions, if you would like.

Good luck.

Jay in the Mojave

That's George Dennis, false accusation, harassing style
posts, usually with foul language or some sort of sexual
innuendo.

Landshark

--
Beware of George WA3MOJ, he is suspect to post
from different ISP's, under different screen nics just to
make harassing style posts with absolutely no useful
content at all. Currently as maverick@topgun.comSPAM

Source record: 119382

Howdy,

I just got a new AH-27F hand held and I'd like add all those other "bands".

My problem is that the insides of mine look nothing like the one listed on the bills2way site. The solder pads in mine are located in a verticle line along the right side of the LCD PC board. There are eight pairs of pads numbered 1-16. Shorting pad eight to it's neighbor produces no extra bands.

Anyone know what's up with this neat little radio?

Thanks

Matthew

According to some self-rightous knowing more than CB shop Hambos on this NG,
THEY need a BIG 36' long antenna! Did you use your 36" antenna on CB
freqs.? I doubt it. I try to get customers the longest Cb antenna they can
stand looking at, which gives the most range, being TOP loaded.
Dave

CB Amplifiers - The Federal Communications Commission (FCC) does not
permit the use of power amplifiers with Citizens Band radios.
Therefore, eBay prohibits any listings of the following:

* CB amplifiers
* Amplifiers specified for use on the 11 Meter band
* Amplifiers designed for use in frequencies 24 MHz to 35MHz
* Amplifiers posted within the CB category
* CB Radios that are amplified to exceed 4 Watts using the AM Settings
or 12 Watts using the SSB settings

Further clarification can be found in the FCC rules C.F.R. Title 47
Section 2.815

LOL

Mind you Dick, in the UK, there has been an explosion in the sale of
diesel-powered cars over the last ten years or so. IIRC 20% of all new

cars sold in the UK are diesel powered. The days of slow, noisy and smelly diesels are now well and truly confined to the history books.

My small Rover (I think you would call it compact?) is 1.5 litre diesel powered, returns 50 mpg in town and nearly 70 mpg on the motorway (freeway?) and is capable of 100mph. No electric ignition system as such, therefore, it has never failed to start.

If the oil and filters are changed regularly, the engine is good for at least 500,000 miles.

I suspect with your gas prices rising all the time, they will soon make a big impact in the USA.

What say you?

Best Wishes
toxic_waste

No doubt about it but for a goodly portion of the US and virtually all of Canada, diesels are worthless in the very cold winter weather. You do have to have vapor pressure from the fuel to start and diesel fuel really doesn't have it. And it tends to gel so the Big trucks are never turned off and have heat exchangers to warm the fuel not to mention tank heaters.

And there ain't no more cold-blooded bastard in creation than a diesel at -10F. I often drive a 6:15-10:30 shuttle in a big Ford diesel cutaway. You wear your woolies in that bus, believe me but my relief driver is usually pretty toasty by mid-morning. Fuel efficiency has its pitfalls.

Someone get this fag a hankie he sure loves to cry, perhaps post about something related to CB, you sidewalk sissy. Go lay down.

Did I use foul language? did I post something you did not say Dennis #12? Was it sexual in nature, or was it exactly as you said ? I mean really how far is Frankfort from Chicago? It was a generalization and I didn't need to look up his number in the phone book thats not my job.

Hello Dick: The big Cats at work have the fuel heated, and so do all
the other Diesels.

A shoot of quick start will fire em up every time. But we sure don't get
anywhere near -10F, but the cold high winds will make ya think your at
the north pole. We have actually quit work over high and cold winds.

Jay in the Mojave

news:20020326022638.19026.00000180@mb-mg.aol.com...

> Jester, Maverick, Top Gun, or whatever your name is this week....

Well what is your name this week I have seen you posted as Xforce, as #12,
as dennis12amplify, few others So why ask what my name is ?

> At least you got my name right!

Why was nothing else I posted correct, it was taken word for word, other
than what i added in the begining about you.

> I do not live in Chicago, I live in Frankfort, Illinois 60423.

How far is Frankfort from Chicago really? To a guy 1/2 way across the
country to me your in Chicago because i never heard of Franfort, but Thanks
for the clarification, you wouldn't consider Chicago as your home area
people are more familiar with it?

> I am listed in the Frankfort phonebook, TWICE!

Really, why a screw up or 2 different names? Sorry I have no need to call
you unless I get a Xforce amp and need to know the inner workings.

> I am very easy to find as I don't hide behind a false identity and refuse
to
> give out any contact information about myself like most folks on this News
> Group.

Thats admirable, being very easy to find is not good if your into types of
illegal things.

> As a matter of fact I have never hidden from anyone for any reason
whatsoever!

All your life?

>
> If I was doing something illegal, or something that I would be ashamed
of, or
> was a puny little guy, I might need to hide; but that simply is not the
case.

Ok, so can I ask a few questions then? Is breaking federal laws re:
amplifiers etc considered something to be proud of? Perhaps in this NG you
looked at as a Folk hero. So you are saying you didn't design a bias
circuit for an illegal amp company ? If you want the accolades that it is
your design you need to take the

what ever else is handed out as well

> I used to be very involved in the hobby up until a few years ago, and knew

What do you use handheld? I got a serious question why do you call it a long nose ? Is the front end any longer than a pick up truck?

> Exactly what did I do, or have I ever done, that was so ILLEGAL that it would
> make me a Federal Pen Candidate?

We have ways of makin you talk,

> (Notice I used the correct spelling of the word 'candidate'

And I am proud of you, I am sure you are a college grad and I would expect no less Den.

> The verbiage you quoted in your post was out of context.

Hey, I just posted what you wrote you made a statement how is it out of context. It sounds as if you support Xforce, have designed for them(fact) and proably would again in the future. If a couple of your biker friends were doing something illegal and you designed a electronic device for them to make it easier for them to
do this illegal deed is that ok? aren't you just as guilty as them?

> That Forum discussion was about bias points VS intermod distortion levels.
>
> Someone like you made a totally off-topic remark that XFORCE amps could never
> be TYPE ACCEPTED for use on 11 meters and I responded to it in kind.

Dennis here you start the back peddlin,

> I know that FCC no longer type accepts any 11 meter amplifiers, (which was
> more than the person who made the comment on the forum did), and I don't expect

> them to start doing it in the future.

No doubt you know this, but as you said "If and When" ... but why are you so sure Xforce would apply and obtain type acceptance, would you lend your advise?

dennis wrote:
"If and when the FCC ever starts TYPE ACCEPTING amplifiers for use on 10 and
11 meters again; I'm sure X-FORCE would be one of the first to apply for, and obtain, type acceptance."

> So my response was more of a sarcastic response to a heckler than anything

> Jay in the Mojave
>

We had a 1978 Chance mini-transit bus that we rescued from the Navy at Corpus Christie and put a new Cat engine some years ago. We called it the Thunderchicken until its wiring went up in smoke. It was a dual 12/24 system, it started and ran the air on 24. That beast would fire up at 20 below in a snow bank no heater, no glo-plugs, nada. I loved to drive it except when body panels fell off from the rust. One student early in the year walked up to it, screwed up her nose, said 'How Ghetto', and I couldn't disagree as she had really hit it.

Quick start fluid is neat until you have an engine with glow plugs. And I can see some senior citizen blasting it into her 1949 Desoto.

One of the minor joys of the Thunderchicken was to dump the Allison into second and cover the guy trying to nerf you in a cloud of diesel smoke. Considering the bumper took 26 bolts, three men, and a hernia to move he needed waking up. That bumper was more of a counterweight to load up the rear duals. God I miss the Thunderchicken.

We get full benefit of living a kilomile from the ocean. Wonder how popular diesels are in Smolensk?

Dick in the Mid Continent

Source record: 119517

You are correct in that a top loaded antenna will be more efficient than a center loaded or base loaded antenna. You are incorrect about knowing more than the CB shop. You see, I worked in one. I've also worked in EMI labs, and worked with open air test sites (oats). The receivers I've used were accurate within a few parts in 10 to the 9th power - and cost more than a Mercedes. As far as the 36 inch antenna, there you are correct. I use it on 440 MHz. For distance, you have a couple of choices. You can use 'skip', which is to say utilize F layer, E layer, or sporadic E reflection, you can use ground wave (which, despite rumors you may hear does NOT exist much above 4 MHz (certainly not at CB frequencies), you can use 'scatter' (which is generally what you are doing running hundreds of watts to communicate 70 miles or so), or you are stuck with line of sight. Running 5 watts pretty well limits you to either skip or line of sight. Line of site can be enhanced tremendously using repeaters. Yes, CB has repeaters. The shop I worked for had a number of repeaters on low band and high band VHF and UHF. That line of sight can be interesting when your repeater is sitting up 1500 feet or more. By judicious choice of repeaters, I can cover from Rochester West past Buffalo, East to Watertown (well East of Syracuse), North to Toronto, and South to Pennsylvania. Not bad for 6 double a alkaline batteries. This is 24/7 coverage. Using CB repeaters from a mobile will give you more range than I have to get into repeaters - and from the repeaters another 40 or 50 miles. And that, my friend, is 24/7 coverage for CB. Of course, if the bands permit, then our 10 meter link on a number of the local amateur repeaters will allow a somewhat larger range. I yakked with England for some considerable time around a week ago, a few months ago I had a nice conversation with Australia.

If your antenna or power is somewhat limited, there is nothing like a repeater.
Again, these exist on CB - at least the 450 MHz business band. And they provide quite a considerable coverage too. My personal e-mail to the original poster
suggested he run both a CB and get a codeless tech ticket for much larger legal
range. That codeless tech ticket gets him access to any 10 meter ports, legally.
Both CB and amateur have their place.

Years ago I use to see a lot of these for sale. But I have checked virtually every known source for one of these. I DO NOT want cassette in it but it has to be digital with time clock display and digital am/fm tuning.

I use to see these in JC Whitney all the time but they no longer carry one. I also have checked all the local truck stops to no avail.

Does anyone have a source for one of these? Or are they gone for good?

Thanks David

5113. Sigh....still not fixed

Newsgroup: rec.radio.cb
Date: 2002-03-27 02:46:11 UTC
From: Axl <no@idontthinkso.com>
Message-ID: <Tnao8.186797$Hu6.45644235@typhoon.neo.rr.com>
Source record: 119525

I took my car to Best Buy today....I wanted them to check the wiring and fix it if it needed to be fixed...and if it looked ok, then I could safely conclude the CB is bad....

So they tell me my friend wired it to my auto start (remote start) and it was reading at 14 volts....apparently 12 is what is good for the CB, so they simply moved the power feed over and spliced it behind the radio. This still may not be an ideal power run, but if it got me ANYWHERE, I was fine with it for now.

So they tell me it's ok now....I hop in my car..as I'm down the street I go to turn it on...and it was already on...no power.....I came home, switched out the fuse....same problem...boom.

So I guess as this point I can conclude the CB is just fucked. I have a new one waiting for me which I'll go pick up tomorrow. The BB guys told me they'll switch it out at no additional charge which I was happy to hear.

IF this last move doesnt do it, I think I'm going to lose my mind!!!

For any of you that think the BB installers are still not doing a proper job of running the power feed, I think this is the best I can do...they apparently do not really install CBs there anymore. One of them gave me the number of a local place that WILL do it, so if they're not too expensive, and they do a more thurough job of installing it, I might have them do it instead.....

we shall see..........

5114. So much for CB shootouts and ham DXCC ...

I have a few of what you may want, some NOS in the box; some used. What you are wanting I'm pretty sure I've never seen, other than stock GM units without tape made in the very early 80's. The nearest thing I have to what you want is an almost new JIL CD85CB WITH cassette for $250. My ones with 8 track (Motorola) have an analog AM/FM dial. E mail me direct for more details!

Why not ask a guy (i.e. Dennis) who claims not to own a CB why he hangs out in CB competition newsgroups, answers questions on an XForce website, and uses a name like "dennis12amplify" in rrcb? OK I'll ask it. How come? Jeez Louise, that's like finding some guy who says "I have no interest in gangsta rap" hanging out with Ice Cube and going by the name of "Heavy G". It just doesn't add up.

> A study of the King James Bible is in order for you! HIStory is
> HIS
> STORY (Jesus's).
>

You mean the Bible as translated for Protestants by the Church of England
Circa 1600?

Pray tell, exactly how is a translation of a translation (the New Testament
having been written mostly in Greek, and the King James being a translation
into English of Latin translations done mostly by Catholic Monks, never mind
the issues with chain of authenticity of the Old Testament) of fragmentary
scripture culled from, and a subset of, the original, under the dictates of
a King to suit his own political aims, the word of God?

>>
>> To this day, Catholics are a subset of Christians, whether your
>> bigotry

>
>
> They are NOT Christians. It has nothing to do with what I SAY
> or
> think--I just read what GOD says about them in the Bible.

(Mt. 16:18-19): And I say also unto Thee, that thou art Peter, and upon this rock I will build my church; and the gates of hell shall not prevail against it. And I will give unto thee the keys of the kingdom of heaven: and whatsoever thou shalt bind on earth shall be bound in heaven: and whatsoever thou shalt loosen earth shall be loosed in heaven.

And thus, Peter became leader of the Christian Church on Earth, and Christ's lead apostle, and each and every Pope since can trace that lineage. On what word of God do you base YOUR authority to interpret scripture?

HIS people
> will COME OUT of that Babylonian Harlot "church." She is full of
> idolatry! She even violated the 10 commandments by changing them!
>

The Roman Catholic Church has no historical ties to Babylon, other than those that go through Abraham.

>> allows you to accept that or not.

> Bible, there would of been NO inquisition.

I would agree with you there, as does the Catholic Church.

God calls the catholic
> church THE ABOMINATION of the EARTH!

Where? Do you speak directly to him?

Jesus HATES it!

I don't think Jesus HATES anything. Hate is the work of the Devil.

It is not the
> true Bride of Christ!

Says who?

It is a Harlot Mystery Babolon religion, that
> was here BEFORE Jesus was, since ancient Babylon, where most of your
> pagan hollidays come from, like Easter & Christmass!
>

Most of the "Pagan" holidays are cover-ups used by proselytizing Christians
to usurp former pagan party-days for prayer, so as to stamp out the orgies.

>>
>> As for "religion determines law" see the 1st amendment to the US
>> constitution for refutation.
>
>
> No, the 1st Amendment was put in BY CHRISTIANS to protect the
> Christian religion from the govt. messing with it. Each countries
> RELIGION determines their LAW System. This is fact!
>

But the US didn't HAVE a religion at its founding. It was founded by a
diverse group of people, mostly of various Christian Sects (including
Catholics, but mostly of Protestant persuasion), who had fled persecution
for their beliefs, and thus felt that enforcing, or supporting, a particular
religion was not the job of the govt., and was in fact a very bad idea.

>>
>> As for the rest of your invective. I suggest re-reading the New
>> Testament. It is only for God to judge.
>
>
> This is what the false "church" teaches. The Church IS suppose
> to
> JUDGE Rightous Judgment.

Judge not, that ye be not judged. - Matthew 7:1

You know, for a fundamentalist, literal, interpreter of the Bible, you
really take liberties with the text. I don't think Jesus could have been
much clearer. 7 words, declarative, and imperative. Ignore at your peril.

We make judgments on a daily basis, like
> whether we should by CB's from RED CHINA.

Which is, of course, covered in the Bible?

The Bible commands
> individual Christians TO JUDGE (read the last 2 Psalms).

The Psalms are OLD TESTAMENT. Jesus came to fulfil, and reinterpret, the Old
Testament. Christians are supposed to give precedence to Christ's words over
those of the prophets. That's the difference between Christians and Jews.
Next you'll be telling me we should put our enemies to the sword so we can
all go live in the Holy Land (just look at what is going on there to see
that THAT is surely not the work of God).

IT seems that
> the false "church" has even brainwashed YOU TOO. Read that King James
> Bible to get UN-brainwashed! Dave!!!!!!!!!!!!!!!!!!!!!!!!!!!!
>

Yeah, the bible as rewritten by a 17th century English King. I've actually read it. It's some of the worst, most unintelligible, English ever written. Scans more like an incantation than an attempt to inform. Why don't you go read the "Good News" version, or if, like I can, you can read Latin, go get a good copy of an early manuscript, like the Book of Kells (which I have also read).

>>

All you do when you post here is proove how truly ignorant and uninformed you are. Instead of wasting your time ranting, go actually read and learn something.

5139. Wilson 1000...opinions?

Newsgroup: rec.radio.cb
Date: 2002-03-27 12:55:23 UTC
From: kc2hmn@arrl.net
Message-ID: <beb0a48b.0203270455.6421ed3@posting.google.com>
Source record: 119401

Hi guys,

Yep, after going about fourteen or so years without running a (hard-mounted) mobile rig, I'm gonna throw one of my 10-meter rigs (HTX-10) in the car. I have a 1999 Mustang that doesn't take too kindly to trunk-lip mounts. (Fiberglass trunk.) That puts me in the market for a decent mag-mount for the center of my roof. I've read good things about the Wilson 1000 in www.eham.net, but I think more folks on r.r.cb have used them than anywhere else. So I'm askin'...impressions? BTW, the last mobile antenna that I'd used was the K-40, and I wasn't all that impressed. Thanks in advance.

I run the Wilson 1000 mag mount with 10 meters (Icom 706) and it does a fabulous job. I have also ran it on 11 meters and also, same opinion. Well worth the $$.

Apparently not... Aaron "the nonexistent" Voobner seems to want to keep
pestering us with his half-baked skewed thinking, both on this newsgroup
and in our personal email boxes.

On top of that, he/she/it can dish it out, but he can't take it. Such is life.

Who's lying now?

I've asked you to stop emailing me, repeatedly, and you have not. My
attorney has copies of the emails and the logs, and will be subpoenaing
yahoo for the IP addresses of the connection that sent the email from
Yahoo. From there, we'll be subpoenaing the ISP who owns those email
addresses, and so on, recursively, until we get the username, the real
name, etc, of the person who sent the mail in the first place.. You should
be afraid "voobboob"... very afraid... your real name is soon to be found.

5146. where can you buy meter lights for cobra 2000gtl

Newsgroup: rec.radio.cb
Date: 2002-03-27 14:47:58 UTC
From: jeff <kbg1@hfx.eastlink.ca>
Message-ID: <RXko8.6729$je5.51337@nnrp1.uunet.ca>
Source record: 119408

hi
my newly purchased cobra 2000gtl has a few minor glitches.
the lights in the meters do not work. are these available as replacements at radio-shack?
what voltage are they as i was thinking of replacing them with white led's?
also the signal meter sometimes sticks and does not return to zero ,is there an easy fix or does it have to be replaced.if replacement is the only option then where can they be purchased?
thanks,jeff

I doubt it has a digital display, but at this site, someone is selling one
for $15...
http://eelink.net/~p-nowak/bronco/html/for_sale.html

This place may still have one, though the listing is a little dated:
http://www.rossdist.com/bo.htm

There is always eBay...
AM/FM/CB/Cass *Digital* out of Trans-AM... 4-Days
http://cgi.ebay.com/ebaymotors/ws/ebayISAPI.dll?ViewItem&item=1815025996

That's about all I could come up with, aside from tons of sites describing
peoples' refurbished "hot rods" that they have added factory original
AM/FM/CB radios to...

From: kc2hmn@arrl.net (Bert Craig)
Hi guys,
Yep, after going about fourteen or so years without running a
(hard-mounted) mobile rig, I'm gonna throw one of my 10-meter rigs
(HTX-10) in the car. I have a 1999 Mustang that doesn't take too kindly
to trunk-lip mounts. (Fiberglass trunk.) That puts me in the market for
a decent mag-mount for the center of my roof. I've read good things
about the Wilson 1000 in www.eham.net, but I think more folks on r.r.cb
have used them than anywhere else. So I'm askin'...impressions? BTW, the
last mobile antenna that I'd used was the K-40, and I wasn't all that
impressed. Thanks in advance.
73 de Bert
KC2HMN
-
The Wilson was made for predicaments like yours..an excellent antenna,
indeed. Go for it and you won't be sorry.

Go for it Bert,
You could spend more $$$ for a broad
band Ham versions, but if you are going
to be between Ten & Eleven meters it
will work just fine.

Bring up http://ah0a and download Morse Academy. Do what it says for an hour a day.

Go to http://www.qrz.com and explore sample exams for element 2 and 3.

Go to http://www.arrl.org. Buy needed books, find a club and exam session near you.

Pass exam.

Give up before you butcher a perfectly good radio.

Dick NBK

I put this file through the debugger:

I found no virus or trojan with file compressed, uncompressed, raw,
hidden in the data, or anywhere else. In fact, there isn't even any
accidental write/delete/format code in the data (data can sometimes
parallel executable code which is usually unintentional, but can be
used to hide data for use by a seperate executable). No code in the
file accesses the BIOS or hardware directly. The file I received is
clean.

From: blowmetheclown@hotmail.com (HD) ï¿½ï¿½ï¿½ï¿½This guy knows his shit. He WAS a primo tech until personal problems (which may have precipitated him leaving town) led him down the path of theft & unreturned radio equipment . DRB attributes it all to Robin - or is it Robyn? Lately, rumour has it that truck driving around Nevada is less troublesome. Nontheless, heed his advice - again, HE KNOWS RADIO stuff as good or better than most. Just don't do business with him, ï¿½ï¿½ï¿½And Bob, that tower is still up on Highland. BTW, there are no radio tech's left in town - except for Dave at Metro. Dago Dan conned himself right out of his front-yard business. HandyMan - George from Palmetto - moved to Ky where he recently died. Goodtime Charlie disappeared & Tom at Lilypad sold out. One fella you know is the best kept secret around & only works on what he wants in his spare time. PLEASE don't come back tho' - no tech is better than a thief. Sorry to hear about Jr - is he still in jail? ï¿½ï¿½ï¿½How do I know this stuff? - I used to work for him & QUIT due to unscrupulous business practices. Your Friend On This End ---------->Hello, HD...how ya' been? If you're the real HD, drop me an email at twistedhed@hotmail.comI have information for you concerning a close friend of yours that moved.

If you can't find them the Antenna Specialist part number is 507-1007 and you need a total of eight for the whole antenna since it takes two to make one hub (cause they are in halves of course) and the AS tel number is 216-349-8400.

I tried all three last night for shits and giggles. I scored higher on
the General than I did on the Tech, but I still passed all three
without studying. The ones I got wrong were mostly about ham-specific
rules (allocations and such). I also noticed a few questions about RF
exposure limits -- interesting. The electronics was REALLY basic, but
it was clear that anyone can pass the Tech exam without even knowing
the difference between a resistor and a squiggly line.

I suppose now I have to work on my code... :-/

Sparks, you only now discovering that the first two writtens are basic duck soup to anyone who knows what burning rosin smells like?

Put yourself in the FCCs position: The tech is designed to unload CB and let ham wives order bread and milk. It is a ceremony not a barrier.

The General, Element 3, authorizes international coms so it is full of regs and propagation and contains little less or no electronics. Like a driver's test, it merely says you know the regs and are physically able to follow them and drive, too; you may be a sociopath but that is the court's problem. You can't get too deep in theory when you have a lot of mandated shit to cover including rf exposure. Nothing about it is complex. Gee, SSB has bandwidth so pumping LSB at 1800 kHz is not the brightest thing you can do.

The Extra, Element 4 can get techie but it, too, has a lot of ground to cover.

The code, if you do not confuse code knowlege with castration, simply takes time and not really all that much. Right up there with playing Nintendo with my seven year-old nephew.

Dick, N&#65533;Big Kahuna

Prices like these will definitely keep you from having to ship these radios.
I'm only 20 minutes away and for these prices, the radios would have to have
an "auto suck" feature.

In the UK... £15.

While it is true that most CBers will be non-technical, this newsgroup has more than it's share of techs... plus a quite a few Hams.
As this group is the "audience", I think we can throw any standard CBer figures or requirements out the window.

Brainbuster.

===

When it comes to high levels of power, then it has to be easier to go with
valves... although CBers in the US of A have a different idea of "high power"
to the UK ones.
With the cost of the transformer, it cannot be worth it for what we in the UK
consider "high power".

===
> And what is with this "pill" thing?
===

It stops the radio from getting pregnant.
You know when your CB is pregnant... it will not come on.

===
> For some reason, it has become a rating
> system. No mention of class of service or power rating, just the number of
> "pills". Common power transistors used in the Motorola designs range from
> 60 to 120 watt ratings, so the word "pill" is rather vague.
===

Must be an American type thing, over here the CBers talk in Watts. The class
of bias is not usually considered, specially with the cheap (and nasty) 25
Watt
"linears" which are biased in class C.

Brainbuster.

Don't care where they come from... as long as it is not some commie country.
Do you call them "wally lights" over there, or do you have some equally
strange name for them?

Brainbuster.

===

My anti-virus claims to update the pattern file weekly, but the pattern numbers seem to suggest that they have been working overtime with extra updates.

I get their latest virus warnings by e-mail, which gives details of the e-mails they arrive in, the attachments found and when the update will be available. Often they will even tell you how to manually find and delete the virus if it already on your system.
I then use a mailbox scanner to see what e-mails are waiting and delete any suspect or spam mail before letting OE download the remaining mail (my anti-virus also does a mail scan).

Brainbuster.

5190. NEW CB

Newsgroup: rec.radio.cb
Date: 2002-03-27 22:04:22 UTC
From: Axl <no@idontthinkso.com>
Message-ID: <Glro8.191470$Hu6.46237195@typhoon.neo.rr.com>
Source record: 119447

Well, whatever the issue was, it WAS the CB....I have replaced it but I decided at this point I might as well get the best I could find...I got the Cobra 25 WX NW ST (http://www.shopcobra.com/product.asp?sku=1755763)

I'm very happy with it....mainly because it works lol...but I'm also getting great range with it (I can tell and I havent even been all around with it yet)...I easily got a ch19 radio check from my house...this one still has the weatherband on it with the most noise control/RF gain control I've had yet. It seems to work well with the newer antenna I got...I got about a 1.5:1 reading on CH19, and it's mid-day right now too, which I guess means it's the most "crowded" time for RF......I believe the BB guys wired it off of the radio power...again I know some of you disagree, but they technically dont install CBs and as long as it works, for now I'm content....of course they forgot to re-attatch my radio's power so I have to take it back for that reason, but I'm still happy that the light at the end of the tunnel for my CB dilemma may have come to an end.

Did I make a good choice as far as the CB unit?

You don't have enough money for a lawyer you lying sack for starters. Why would your attorney subpeona Yahoo what is the charges? Someone sent you an unsolicited e-mail like the kind we all get everyday. Remember what you said here Chris If you don't follow thru you will be the laughing stock of rec.radio not that you arent already with your childish post. wa wa he sent me a virus, then recant. What kind of shit are you on? What ever it is get off of it quick. btw, can you give us a time table of when we can expect you to have your lawyer do all this legwork? What are the charges you are filing? You are starting to sound like Landshark.

I just put a bid in on a new Wilson 5000. We'll see what happens. I checked out the Wilson site and the 5000 looks like a slightly beefier version of the 1000? Thanks everybody, the info's much appreciated.

Dave,
Don't look now but they have built Catholic Churches in the Smokies NOW!
We are all over!!

BTW-Since you don't like RED CHINA, go ask your local Catholic
Padre what he thinks about RED CHINA?

BTW-The Catholics are the most persecuted sect of Christians in
China.

The Govt there has KILLED those who preach the Gospel, whatever
the flavor.

You will love an iambic keyer and straight keys went out with tail fins.
On New Year's Eve we dig them out.

Sideswipers were invented or at least developed on the Great Lakes where
the op had to have one hand to hold onto a bulkhead. Then came the
Vibroplex keys (known as 'bugs' because they used the goldbug -- you
mentioned E.A.P I didn't -- as a trademark) which did the dits with a
pendulum but you had to do your own dahs. The first electronic keys used
a single paddle but the iambics use two, one way gets dits the other dahs
but squeeze them and they alternate. Personally I prefer the single
paddle but can use the iambic.

So much is hidden in plain sight.

Wilson makes a great antenna. But like any hi Q antenna. Hi Q = low bandwidth. A 102" whip is the best 10 meter antenna out there.
The 102" whip was actually made for 10 meter, it's resonant freq is in the 10 meter band and not the 11 meter band as most people think. If you don't believe it, hook up an swr meter and see for yourself. When I run my 2950 in the truck I use a whip with 16' of 8X and have an swr of 1.2 at 26Mhz and at 29.7 Mhz.

I can't recall that I've ever heard anything bad about the W1000. As I
understand it, the Wilsons are all excellent antennas, definitely among the
best - if not THE best - in their class. I think you'd be happy with it.

Me, I've always run a Van Ordt Pow-R-Stick, but like a FireStik, that's a
bit bulky for a mag-mount unless it's one heck of a strong magnet. The
steel whip of the Wilson definitely presents a lot less wind load. :-)

Resonance drops into 11 meters if you use a spring mount so you can look like Broderick Crawford and clip it to your rain gutter when not in use. And, yes, I am well aware that both BC and rain gutters date me a bit.

While not doubting your word, the whip really should not get better than about 1.5 at any freq and have a 2:1 bandwidth of something less than 3 MHz. This leads me to suspect you are generating a bit of heat along with the radiated signal, kind of like an attic dipole loading the roofing nails. Nothing has bandwidth like a resistor and if it is 50 ohms or so the SWR is really great.

Is this another case of confusing meter readings with reality?

> Country ! Good Luck ! DW.

The base vs center loading issue has been around for a while and generally boils down to yes in theory the center is the more efficient but it takes twice the coil to do the same job which brings up losses and/or windload. Base loading also allows tapping up the coil to get a 50 ohm match on an antenna that is naturally closer to 25 so center loading has to solve this issue as well. When it is all over, people who do it for a living do the base loading trick with a few exceptions. The k-40 is a good example of one so be in no hurry to improve it.

Top loading cannot be done with a coil; it is done with a capacity hat which can be anywhere above center to help the bandwith but like the coil works better at the end. These tend to be mechanical monsters but do work. Basically they are a big wheel that clips to the tip.

Next time you see some WW2 Nazi flick or whatever you will see an antenna that has about 6 parallel horizontal wires with a single feeder coming down. In truth this is a top loaded vertical, the feedline is the antenna and the rest is top loading. This is called a Marconi which gives you some idea how long they have been in use.

Enjoy the rig, keep a hand on your wallet, there are some pseudo-techs out there that can butcher a rig in a heartbeat.

They should try not to slash so hard. If you can prevent them from slashing so hard then the slip fielders may be spared.

Also if they are really that hazardous, perhaps the slip fielders and the keepers should try to improve their catching techniques?

Cheers
Rats "anyone remember that Faulty Towers episode?"

Base or mobile ?

(Here we go again,I hope this does not get into the Bug Catcher antenna discussion again.)
As known at 11 meters the bug catcher is just a 1/4 wave antenna, equal to a 102" whip. In most cases a center mounted antenna, or trunck mounted can out prefourm a 1/4 wave antenna in some directions.

5227. Re: Distance of a CB

Newsgroup: rec.radio.cb
Date: 2002-03-28 05:26:49 UTC
From: mrcrowley7118956@aol.com
Message-ID: <20020328002649.06906.00000453@mb-mf.aol.com>
Source record: 119489

How do I extend the range of my mobile CB radio?

you need a 102 inch steel whip antenna and a big linear. then the distance you can reach will increase greatly!

Well, in actuality, he'd do better spending more time and thought on his antenna than spending money on a linear.. but to each their own.

Make the antenna more efficient, and you'll get out much further on less.

Hi Jeff yes you can buy the 12 volt lights at radio shack if your match is of it may mess with the meter some tecks try to tune the radio and hit the wrong control by the way I found that the power supply is wired wrong on those radios factory mistakes like that can make the lights go dim when you talk.

<guystarsky@attbi.com> wrote:

>How do I extend the range of my mobile CB radio? Please respond to
>guystarsky@attbi.com.

First rule: If you can't hear it you can't work it. So it's probably best to get the best antenna you can and mount it properly. The best mobile antenna is a 102" whip (1/4 wave), but shorter ones can work ok. Regardless of what antenna you use, you need to get it as high as possible, and the roof is best.

Second rule: Just because you can hear them doesn't mean they can hear you. That can happen for various reasons, but the most likely reason is that they ignored the first rule and bought a linear.

Third rule: Don't sweat the power. 16 watts will only give you twice the range of 4 watts, and that is only in theory. In practice it is much less because mobile CB is predominantly ground wave propogation which doesn't carry very well on 11m (power makes little difference with line-of-sight propogation -- if you can see it, you can work it).

Then there is the Golden Rule, meaning that if you step on other people by trying to get more range than was intended from a CB, then expect to get stepped on yourself. If CB doesn't get you the range you want then you might look into getting a license (which, I found out recently, is WAY too easy!)

I remember when I first picked up the study guides, I got the complete
set along with the code software from Gordon West. (I'd be happy to
send the whole kit-n-caboodle to ya.) After cracking that Tech book
open and reading the first ten or so pages, I was actually shocked.
But then again, I'd already been exposed to some electronic theory. A
brand newby might see it differently?

This is probably the part that surprised me the most. If you use the ARRL CD's (or any other tapes/CD's) at "Fast Farnsworth" or approx. 15-wpm, the actual exam characters will feel like they're literally floating in. In any event, a few minutes of practice each day and you;ll have it licked in no time flat. Lemme know about the books and software. Heck, I already have the shipping box ready. Take it easy.:-)

Seems Q's usage of "maroon" was ironic: a "maroon" is "a fugitive Negro slave of the West Indies and Guiana in the 17th and 18th centuries". I bet you didn't know that when Bugs Bunny said it!

I like the Conrad quote, Jason.

What will Howard Goldberg, KBØTUJ, sentence be?
What SHOULD it be?
Oh, where are thou licensed mouthpieces and channelmasters for zero tolerance of federal law?
Oh, why art thou so silent on this issue?

Oh, ye of nocode status, tell us Dougie, should he be assumed homosexual for his acts?

Jerry O? Whaddya think he should get? You usually have plenty to say concerning this sort of thing.

How about it, Sparks? Should his fingernails be ripped out then sent to rot in a Turkish prison?

Whaddya think, Leland? It certainly merits more punishment than a freebander, eh? Should we shoot him TWICE?

How about it ,"Hall" <g>? Should the court "set the example" with this renegade outlaw licensed amateur? After all, he is not only a deviant from society, he is endangering it...deliberately.
-
A Burnsville man pleaded guilty Monday to obstructing the legal process in connection with repeatedly breaking into police radio communications, sometimes urging officers to shoot suspects.
Aaron Howard Goldberg, 32, will be sentenced in Dakota County District Court on March 19. Goldberg could not be reached for comment.
Since at least April 2000, Burnsville police and fire, along with several other public safety agencies, experienced unauthorized radio communications on their radio frequencies, according to the criminal complaint. Burnsville officials documented about 25 incidents they believed were caused by the same hacker.
On February 4, 2001, a Burnsville officer heard a male voice on the air say "You betcha" and noted that the transmission was extremely clear, causing the officer to suspect that the source of the transmission was close by. Just after hearing the transmission, the officer saw a car that was one of the suspected vehicles involved in the radio transmissions.
Officers observed the driver take a handheld radio transmitter and place it in front of his mouth. At that moment, officers heard a male voice over the radio that appeared to have used an obscenity.
When stopped by police, Goldberg said he had broadcast on the Burnsville emergency frequency "more times than he could count on his hands," according to the criminal complaint. When asked why he did it, "Goldberg stated that it was just stupid."

Hi Landshark,

No, I really don't want to spend the extra bucks for an Outbacker (What a rip!) or a Hamstick. I want to keep the car looking halfway decent too. I think the Wilson 1000/5000 will look just fine for my purposes. If it can cover a 1 MHz swath of the 10-meter band, I'll be happy.

A few years years back, I had gone to one of the local public beaches and saw a fellow with a small van erect an Antron 99 on a small mast fastened to his rear bumper. The mast was attached so it could be raised in a lever fashion. Of course I walked over and chatted with him for a bit. He was running a Cobra 148GTL on 11-meters and a RCI-2950 on 10-meters...and making EFFORTLESS contacts with both. I think it's safe to say that the next new vehicle in the family will be a minivan. (Probably a Ford.) I would kinda like to have this option with a mast mounted permanently on the rear corner and a vertical alway at the ready.

well mr comcast good buddy. you are thinking like that the piece of
ssi receiving, food stamp getting, welfare abusing, freeloading,
trailer park trash piles that you are and not taking into account that
everyone on this newsgroup is not like you pal...first off, a lot of
us have a thing called a freekin job and if such legal matters come
up, then they will be funded.....it wouldn't cost as much as you
think.....an attorney can do this on the side for a few extra
bucks and then, you know what,.....your hero would be running around
without his pants on for the first time in two years.....and
that.....that is a good thing....

TW,

It makes no difference who he is, whether he holds a license or not, he should be punished
according to his actions. There is no excuse for anyone to operate on frequencies for which
he is not licensed and also interfere with police or business radio in the process.

(snipped for brevity)

Just a simple sentence. One year in federal prison and a $10,000.00
fine should do the trick. Oh yes, revocation of his license. A year
should give him time to get over stupidity. I knew a guy (he died
earlier this year) who was in court for non-support. He drew a six
month sentence.
He told the judge he could do that standing on his head. The judge gave
him another 6 months 'to get back on your feet'. It worked wonders.

Found this on the SWL ng and thought you or one of your west coast buddies may wish to call this guy.

I've snipped all the other gear he has for sale.

He states:

I will be bringing all this STUFF to the TRW Swapmeet in Redondo Beach, CA. on Saturday 03/30/2002. My spot at the swapmeet is E-1.

Directions to the swapmeet Take the (405) Freeway , which is the San Diego Freeway , and exit on Rosecrans Blvd. It is THREE (3) exits south of Century Blvd. which is the exit for LAX, go WEST three signal lights to AVIATION Blvd. turn LEFT going south go another two signal lights to Marine, the swapmeet is just 100 yards south of Marine of the left side of the street on the east side.

" HOPE TO SEE YOU ALL THERE.....73"

The swapmeet is from 7:00 A.M. - 11:00 A.M.

Henry Radio 3K stand up console amplifier with tear drop meters, one missing with manual wired for 220 volts, not tested , as is , pick up ONLY Los Angeles.....$269.00

Swan 350 with Electro-voice 727 desk microphone, and matching Swan 117-C power supply and power supply with manual works Great.....$139.00

Gonset GSB-201 desk amplifier runs 4 - 811's with manual wired untested (pick up only Los Angeles) for 110 volts $240.00

Please view my web page, and look under Accessories, & Boatanchors Galore.

ALMOST ALL THE ITEMS LISTED ABOVE ARE ON MY WEB PAGE "

Message-ID: <74Ko8.1522$Xu6.175132@newsread2.prod.itd.earthlink.net>
Source record: 119575

Does anybody know the URL to Van Ordt's web site, if there is one? I could swear I was there a few nights ago, surfing at work, and now I can't find it here at home. Yes, I've searched, exhaustively, in every way I know how. No, it's not vanordt.com or www.vanordt.com - that's "under construction" and appears to belong to a completely unrelated entity.

Hi Twistedhed,

As liberal as my rf views are, I gotta say that when you deliberately mess around with emergency or public safety comms, you deserve the full weight of whatever agencies whose attentions you draw. It's one thing to park on a HF forestry service frequency that's been ostensibly abandoned for greener VHF/UHF pastures, but this guy was deliberately interfering with police comms. That's bad for us all. Just MHO. :-)

There is likely more to this than radio interference. Since the guy interfered with situations requiring police action (the shoot 'em comments), I'd want to know if anyone was injured or killed, or did the interference cause others to be injured or killed, or was any property damaged as a result of the interference. It is reasonable to assume something happened. Somebody didn't get a message or an address was mangled and had to be repeated taking additional time. The guy can be tried in federal court, but when he gets out should also be tried in state court for all appropriate charges up to and including manslaughter. He won't need a license when he finally gets out. He failed the common sense test.

In most cases you are 100% wrong. Why don't bradcast stations use coiled
antennas instead of those giant towers they set up for verticals? Since coil
antennas work better.

Revoke his license permanantly, if he has no license, then prohibit him from getting one. Then, instead of prison, have him walk naked down the main drag and have him carry a sign admitting to the crime. During the noon rush hour.

Screw federal law. Peoples lives were at stake.

Take it EZ up that-a-way!

Published on May 11, 2001, Page 3B, Saint Paul Pioneer Press
BURNSVILLE MAN CHARGED WITH HACKING INTO POLICE RADIOS
Source: Tammy J. Oseid, Staff Writer
A Burnsville man who allegedly broke into police radio communications and repeatedly urged officers to shoot suspects was charged with a felony Thursday in Dakota County Court. Police say Aaron Howard Goldberg, 31, hacked into public-safety communications at least 25 times since before April 2000, according the criminal complaint. After his arrest, he told police he did because it was "just stupid."

Hi Twistedhed,
As liberal as my rf views are, I gotta say that when you deliberately mess around with emergency or public safety comms, you deserve the full weight of whatever agencies whose attentions you draw.

-Absolutely.

It's one thing to park on a HF forestry service frequency that's been ostensibly abandoned for greener VHF/UHF pastures, but this guy was deliberately interfering with police comms. That's bad for us all. Just MHO. :-)

I know this has absolutely nothing to do with CB Radio.

But......

I downloaded ICQ Version 2002a Beta. and It installed and loads fine, But it will not connect to the server. 2001b worked fine. But this new one isn't connecting to the server. I'm running Comcast Cable, but the old version worked fine. New one, no dice....I did all the obvious stuff, looked for a new server, even turned off my firewall, but still it will not connect... anyone else had this problem???

As usual, Twist only gives us half the story. Here's the guy's
cancellation notice from the FCC.

-Aaron-

May 11, 2001
Aaron H. Goldberg
105 Chancellor Manor
Burnsville, MN 55306-4959
Subject: Amateur Radio License KB0TUJ

Notice of Cancellation

Dear Mr. Goldberg:

By letter dated April 22, 2001, you submitted your Amateur Technician
Class license to the Commission for cancellation.

We will forward your request to the Wireless Telecommunications
Bureau.
Should you apply for an Amateur license in the future, issues
surrounding allegations of radio interference to the Burnsville,
Minnesota, Police Department may have to be resolved in order to
determine your qualifications to hold an Amateur license.

Twist, it took me while to figure out exactly why you are so
interested in this guy's case.

Normally, your posts are PRO-lawless radio operation. Your
anti-government, anti-FCC, anti-police sentiments are well documented.
So why would you take the time to post something that actually
SUPPORTED legal radio operation?

However, when I noticed the offender's name....

Aaron H. Goldberg.

...it all fell into place. So you think you're onto something here,
eh? Maybe a hidden plot? A secret identity? LOL!

So your saying only assholes like you talk on cb radio? and use this NG?

here again we have a case of you thinking small. you
> seem to be some boy who has probably a antron 99 on a piece of pipe

Oh yeah sd you got me pegged

> next to what can be reasonably assumed to be a house,

Do they call the shack you live in a house,ILl bet you spent more on your 2x
6000 amp than you do on your home.

if you want to
> call it that.....and you cannot talk because the boys in the
> keystone have the maul down.....well who cares.....

Thats what I say who cares.

.....but boy, you are not seeing the whole
> picture .....sonny.....i say again.....it would not take much to
> find out who voobturd is.....i ask you.....where have you
> been????

It won't take much huh? So lets just say by some stroke of luck you finfd
out he is aaron h voobner what are you gonna do more idle threats. remember
we can also find out who you are just as easily my anonymous acolyte.

> since when does anyone need a reason to sue somebody.....

Don't be so stupid you jack ass you need some legal grounds to sue someone.
perhaps we will sue you for being a smacked ass SD Jones then we soon too
can find out who you are if anyone really cares. You arent Ronald John
Johnson are you from 15211 Via verde Cir Houston Texas 77053 281-575-1836
is this the correct address Come on?

????? get a grip little boy.....and grow up and
> smell the coffee.....payday someday.....and
> boobturd's time has come.....

sounds like maybe you time has come and gone. Can you smell what the head is
cookin

What will Howard Goldberg, KB?UJ, sentence be?
Twist, it took me while to figure out exactly why you are so interested
in this guy's case.
Normally, your posts are PRO-lawless radio operation. Your
anti-government, anti-FCC, anti-police sentiments are well documented.
So why would you take the time to post something that actually SUPPORTED
legal radio operation?
However, when I noticed the offender's name....
Aaron
H. Goldberg.
..it all fell into place. So you think you're onto something here, eh?
Maybe a hidden plot? A secret identity? LOL!
-Aaron-
-
  Aaron, even though I now consider Twist an ass, he still does have
some redeeming qualities that distinguish him as human. Give him a bit
of a break, will ya?
--
Leave her alone, will ya? I wouldn't have even seen her post if it
wasn't for yours. One thing we won't do in the future though, is assume
stupidity on your part when malice explains it all. Enjoying your new
canine digs. :)

I would do what was done concerning the ticket. Cancel it, along with a note that if he should apply for a ticket in the future, this record will factor into any decision as to whether he should hold a license or not.

Seriously, this is not a ham vs cb thing. Lately, the number of people who just feel they are entitled to do what they want is getting out of hand. Folk who don't stop for stop signs; the idiot driving all over the road, cell phone planted in his ear. The question isn't so much over the freeband or 10 meter incursions as it is 'where do we collectively draw the line?'. Apparently the guy in question just thought it would be 'cute' to get on police frequencies (apparently this is more fun than trying to jam amateur repeaters - I don't know).

Thankfully this is his problem, not ours.

73 from Rochester, NY

Wow! You guys are really upset over this hammie bust thingy!
You always did enjoy playing shoot the messenger, but it doesn't say
anything for you girls who simply haven't learned how to debate without
your personal feelings getting in the way..they really should toughen up
the standards on amateur testing..the flood gates are open and you are
the epitome of one of the poorest examples that amateur has to offer,
and judging by your QRZ page,
the amateur world seems to agree with the rest of the world...for some
reason people just don't seem to like you, Lelnad, and you find solace
among the other malcontents instead of trying to improve your standing
among amateur radio, which indeed highlights the fact that you are
indeed part of the problem in the amateur world. Don't focus so hard on
your personal feelings and try to have some related input once in a
while that actually makes one want to read what you have to say instead
of killfiling you. After all, it's not about you or your feelings of
inferiority, it's about a casual radio hobby.

Good deal,
Yeah I have an extra Army Bigstick and do the
same thing occasionally. I set it up in the back of
my truck using a patio umbrella stand holder, 12'
mast. So when you are parked on the side of a
hill that is around 2000' feet and is almost the
highest spot for a radius of 75 miles it gets out
pretty good.

I would do what was done concerning the ticket. Cancel it, along with a note that if he should apply for a ticket in the future, this record will factor into any decision as to whether he should hold a license or not.
Seriously, this is not a ham vs cb thing.

-Exactly, only you see how some act when the pendulum is reversed and it's a licensed amateur. The kennel brigade came out all at once, calling names, being insultive, and doing what they do best, instead of commenting on the walls crumbling around them. Did you hear about Riley's warning the other day to licensed amateurs? He said,, "Your days are numbered", referring to the behavior being recorded by vested interests for proof that certain frequencies should be reallocated for other services..the vested party WILL be nailing home a point, for when they play these tapes in front of a member of Congress and say, "THIS, is what you refer to amateur radio as?", as Riley says, these boys are going to be another nail in the coffin.
Human nature is human nature..common sense tells us the deviant amateurs and cbers in this forum are the same on the air...the problem.ops....YOUR problem as a licensed amateur. It is these types that WILL be the death of amateur radio as we now know it.

Lately, the number of people who just feel they are entitled to do what they want is getting out of hand. Folk who don't stop for stop signs; the idiot driving all over the road, cell phone planted in his ear.

-I agree. I'm all for a cell phone ban while driving, unless it's hand's free.

The question isn't so much over the freeband or 10 meter incursions as it is 'where do we collectively draw the line?'. Apparently the guy in question just thought it would be 'cute' to get on police frequencies (apparently this is more fun than trying to jam amateur repeaters - I don't know).
Thankfully this is his problem, not ours.

-But it is ANYONE's problem who has an interest in the preservation of amateur radio. These boorish "newbie" ops in this forum are not interested in the integrity of the service and have shown repeatedly they have no respect for it. They have a problem with the current topic as it shines a light on their actual impotency and reminds them how powerless they are of controlling things in their own backyard, at the same time attempting to present amateur radio as a pillar to compare cb to.
When an op signs his call signs, he is representing amateur radio as a

whole, whether he likes it or not. Their angry attacks aren't even focused on radio anymore. They focus on anything but, falling neatly into the category you just described as people doing whatever they want. Attack, petty insults, and all their trash talk, then a call sign at the bottom of their tirade. All the smoke and mirrors in the world can't hide the black eye these chumps give amateur radio. But someone is supposed to believe that when these jokers get on the air, they suddenly become Mr. Rogers?
Again, I repeat, it's anyone's problem who has an interest in amateur radio.

Source record: 119703

Hello Philip: Good to hear from you, hope life is firin on all 8 for you.

Good deal I am looking for a Gonset GSB-201, for the memories of the old days when 400 to 500 watts was a lot of power. I can see the old man loading up now......

I saw a really neat modification to a old Gonset GSB-201 that replaced the 811A's with a quad set of 4CX250's. I think the power transformer was replaced and a few other of the components.

But the modification was a truly a class act, big time. Even the meters where backlight and had a brightness control. The modified amp had a selectable drive level, controlled by a switch on the front panel. High/Low Drive.

This allowed the modified GSB to be driven by low power, around 5 to 20 watts, or for high power power around 60 to 100 watts, pretty slick if you ask me.

I know Leo, talked to him few times over the phone and at the TRW Swap Meet, neat guy.

Next time your over this way in the Los Angles area maybe we can hit the TRW Swap Meet, then a local restaurant, for steak and eggs, with all the radio enthusiast guys. Then we can hit the locals in Los Angles for a shoot out, and BBQ and socialize around and meet everybody, we'll have a great time.

Then only a few hours drive to my place in the Mojave Desert. There we can go shootin, motor cycle ridin, hikin around, visit a bunch of old mines, and take all kinds of neat pictures. Up in Ransburg they got a old West Museum, and I know the guy who runs it real well, and there's are all kinds of places we can visit. My uncle owns a bunch of property up there, having a cup of coffee with him is well worth the price of gas to get there.

Gobblers Knob is a neat local hang out that everyone goes to for takin your honey out on a date, it has a great view, WOOO HOOOO!, and even a few 2 footer steel targets at 200 yards there for plinking. But the greatest thing about Gobblers Knob is the skip shooting qualities there. Not everyone can make it there as a 4 wheel drive is needed, and those Mickey Mouse SUV's won't make it, they just don't have the ground clearance.

I'll will check in with Leo big time, thanks a million for the tip. TRW is great place to buy what every ya needs. It also saves a bunch, from

buying stuff off E-Bay, because there isn't any shipping chargers, and ya can see it right there, and there's always someone with a generator that will let ya fire up the equipment.

We will bring out our own Coffee in one of those neat double insulated giz-nosticks things, the Coffee there is rumoured as never being washed out, be advised.

There always a few of the guys and gals who are there all the time, "Beat the Heat", "Big Bob", "Button Down Babe", "Square Jaw McGraw, and his other
brother Sammy", "Flame Thrower", "Tommy", "Mojave Desert Don $ Welfare Clare", (thats brother Don and his wife) "Randy the Silent One", Big Bang", "Roger Rabit" and a few others.

Up in the Mountains once in a while we have a CB Break, with all the locals, its a gas. We have a big BBQ, that is even sometimes Catered, by the channel 12 group that has a restraint in Barstow, its great. They even had a band come in and play live music, but thats rare. Got a dance floor and all.

Jay in the Mojave

well this whole thing is merely some hate monger taking advantage of a
statisical study done in new jersey to determine who the most flagrant
speeders where on the highway.....this study was brought on by the
claim by some that cops were targeting blacks , or as the term goes ,
'profiling' drivers on the freeways.....well the statistical
evidence suggest that blacks speed more than anyone else.....and
therefore get more of a proportion of the speeding tickets....so this
statistical fact is jumped on by those who hate, to further their
cause.....the problem is that they take certain truths and try and
base an entire movement on these truths to justify their hate.....it
will not work now, nor has it ever worked.....and it is such a waste
of time. hate takes such a toll on the human condition and is such a
waste of time...kind of like boobnutts and frank trying to run off the
big radio ops on rec.radio.cb...he, he.....ain't going to happen, not
now, not ever.....

Heh, reminds me of a year ago when I was in Iowa with friends and we stopped at this bar in the middle of
nowhere, right next to some farmlands. We got drunk and started fooling around. At one point we made a bet - I
boasted that I could bring a cow to an orgasm in 5 minutes.

So we got out, walked for about 6 minutes to the nearby paddocks, I jumped over the fence and there was a
bunch of sleeping cows on the ground. So I sneaked up behind one, dropped my pants, lifted up the tail, used
the fingers to spread the entry, and moved in all the way. But the thing is quite loose, so I inserted the index and
middle finger of my right hand as well, while keeping the tail out of the way with left hand. Done that, started
pumping in and out. The cow woke up, got confused at first, but then it frightened her and she started thrashing
around. I kept balance for a bit, but then lost control and she has thrown me away. Lost the damn bet.

But that was good fun, the problem started later. A few days after, I got a rash on my genitals, the scrotum
started itching and got red. I went to the doc, he looked at it, then slowly looks back at

me and first thing he
says "You havent been doing anything with farm animals, have you?". Oh man, that was so embarassing. I
couldnt admit it with a straight face and mumbled some excuse. He gave me a cream that I had to apply to the
affected area daily, and the problem passed after a week or so.

Lucky guy you are... I never saw it.. Didn't even come here. Cool thing
is most of these types of posts never do... That goes for all the other
types of SPAM as well. Most never show up.. Thankfully!

5354. Re: Antenna Question mebby Jay?

Newsgroup: rec.radio.cb
Date: 2002-03-29 18:31:24 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3CA4B2FC.F52440FF@qnet.com>
Source record: 119716

Hello Tim: Yeah thats just a 2 element Yagi Beam Antenna.

Its light weight, and easily rotated, probably 3 to 4 dBd gain, something like that.

The problem with the antenna mounted as the picture shows it, will have a significant amount of its energy pointed up to the sky, as its said to warm up the clouds overhead.

It will be ok, but needs to mounted much higher, it will work better mounted vertically at low heights.

The Gamma Match shown in the picture is a cheap and easy way to tune the coax to the antenna, or antenna to the coax. But the Hair Pin, or Beta Match method is better, more efficient, but costs more to manufacture, in production efforts, and materials, but in my book well worth the price.

The antenna can be easily converted to 11 meter use, if the elements are able to be made long enough, some times there isn't enough tubing length for a 10 meter beam to be made long enough to make the 11 meter band. The spacing between the driven element and the reflector, probably isn't a big deal, being only a two element beam antenna. The original spacing between the two elements should be made a little longer, but also may not be even noticed. There's quit a allowable distance envelople there for spacing.

Be advised..... If the antenna is foreign made, the tubing may not be compatible with the American sizes of tubing that will allow the antenna to be lengthened. A local metal supply house that sells aluminum tubing in 1/8 inch OD increments, with a .058 inch wall thickness will allow the tubing to telescope into each other.

I would ask the guy whos sells the antenna for one that works on 11 meters, then it can real easily be converted to be used on 10 meters.

Some of the guys in the know, order 5 element beams for 12 meters, then slightly shorten the antenna elements and spacing, to operate on 11 or 10 meters, so that a more heavy duty antenna can be had.

The ARRL Antenna Handbook, shows 10 meter Yagi Beams, that could be used for 10 meters. They also give the dimensions for using the beams on the upper part of 10 meters, that can be rolled into a converation for 11 meter use.

But I think a 3 element MaCo or Jo Gunn will work better, and easier.

Where did this happen in this thread, who is calling whom names ? You are lying again Twitsy. Now If it happens to Toll free he is a licensed ham as well as Jay and bert and a host of others will you call them Cbers or hams if they get busted doing this same thing thids guy did twistsy. Awaiting your answer If this guy killed someone will they say he was a ham? If he was caught doing it in the ham bands then he is a bad ham, he didint he was on police comms the fact he had a amatuer license is irrelevant. He is kust a stupid individual.

Wow! You guys are really upset over this hammie bust thingy!

Twisty this guy and what he did has nothing to do with ham radio, the only thing is he held a ham license, as well as a drivers license does this mean he is now a bad driver? Since what he did was not related to ham radio nor driving what is your point with him being a Ham.

> antennas instead of those giant towers they set up for verticals? Since coil
> antennas work better.

The 'coil' is simply an inductance which adds electrical length to the
antenna to provide a proper match to the feed. If coiled antennas
worked
better, broadcast stations would use them. Those huge towers are likely
full 1/4, 1/2, or 5/8 wavelength antennas. There will also be a HUGE
array of ground wires laid out under those things. They also often use
two or more such verticals, properly phased, to obtain a desire
directional
pattern to their broadcast.

Hello Stephen Gale: I am sure the local Library will have some of the older ARRL Handbooks, that show the 6146 in a grid feed Linear Amplifier circuit.

I would look for a grid feed, Class AB-1, amp with say 2 to 4 tubes being used. About 30 to 50 watts out of each one.

Good luck.

FT-1000 mod

1. Remove power and ant.
2. Open case like explained in your "operating manual".
3. Locate four screws attaching front panel and remove the top screws.
loosen the bottom screws.
4. Tilt front panel forward.
5. On the left side of the radio, remove the plug from power supply to
the front panel. (gray and white wires.)
6. Locate the jumper position 3 on control board.
7. Change the jumper status in position 3.
8. Re-assemble radio.
9. Reset CPU (see your OPERATING MANUAL)

The above doesn't sound like butchery to me.

Isn't butchery what the boob, and others try to do to this nrewsgroup?

He has a friend, who heard from a friend of his, who takes his dog to the same vet that his dog goes to, that knows a girl who used to date a guy that thought he had a Wilson once, but isn't sure.

My friend picked up a old Galaxy 2100 (we think) and we would like to know how to disable the roger beep in it and also any audio and power mods that might be out there for it. I looked around the net and couldn't find anything. Also anyone know when this radio was made?

Thanks much,

Matt

I'm not crying. I unlike others to this thread are staying on topic.
The original poster asked for a mod. Another poster said modding
a FT-1000 was butchery. The below proves it isn't.

The main source of butchery is as I said. Certain posters to this
group try to force an agenda. That's butchering a newsgroup.
Sounds like you may be one of them.

It's called a "soft" mod. While I wouldn't exactly call it "butchery," I never had the heart to perform it myself. I presume we're talking about the FT-1000D.

> Good luck.
>
> Jay in the Mojave
>

For what amounts to a glorified sweep tube the 6146 makes a pretty decent linear. Some comments after a bit of experience with them.

1. Any amp with parallel devices requires a pretty decent match among the devices. It is not nice to throw in a spongy takeout with three new tubes or vice-versa.

2. These tubes are really sensitive which means they are really prone to VHF parasitics and being pretty decent amps to 175 MHz and beyond this can be fatal to lots of things including the tubes. Pay real attention to minimum lead length consistent with heat dissipation and please, please use a separate parasitic choke at each plate cap. Something like 3 turns of #10 on a 2watt 47 ohm resistor usually does the trick.

3. The 6146B/8298A is not the same tube as the 6146, and 6146A. The B version will generally replace the A if there are no mechanical problems but definitely not vice-versa. The B is a bigger tube all around, eg. 35 watts plate diss vs 25.

4. The grids are very fine wire and neither the control nor screen grids really like to draw current. Keep it to 3 on the control (should, of course, be zero in AB1) and about 6 on the screen. This is critical for tube life. Your choice but given the price of tubes some zener regulation and fusing is not a bad idea on the screen but feeding it off the plate thru a 25 ma divider is probably enough.

5. There are three cathode pins on a 6146 and all three of them should be firmly attached to chassis ground separately. Get this kitty above ground and you will have a real stability problem. While good grounding for rf and dc is good practice anyway it is especially important to this type of rig. Considering the filament draws something over an amp, this is not the place for cheesy sockets and undersized wire.

6. Run the plates at 750 or so, the screens at 200 subject to the current above, back that off to about 160-175 if you run at 600. Set resting current to about 25ma per tube which will take about -50 bias which I would suggest you get off the isolated power line and drop with a voltage divider that draws about 10 ma for 2watt resistors and 25ma if you can get 5 watters. The bias supply has to be pretty 'stiff' but regulating it is overkill tho I did it and drawing some bleeder current helps the filtering which obviously has to be pretty good. For the tank, figure plate impedence at 3500 ohms per tube and plate current should not exceed 125ma on peaks and not for long. Make the plate coil out of small tubing and your life will be happier; circulating currents in the 10-12 meter range can get high.

7. Run AM at your peril. All figures above are for SSB and the B tube.

And be careful, you are dealing with fatality levels of DC and RF.

Now that I know what it is, I wouldn't call it that either. But like you,
I still wouldn't do it.

Just seems like a vast amount of effort and money for what is at best a
half-vast result at a time when the spots are heading down. Glorioski, if
you are ready for real radio (SSB) it would sure seem to be time to do it
for real.

Federal Communications Commission

Washington, D.C. 20554

In the Matter of) File No. EB-01-SJ-094)

Javier Rodriguez.) NAL/Acct. No. 200232680002)

Boqueron, Puerto Rico) FRN 0006-0437-80

FORFEITURE ORDER

Adopted: March 26, 2002 Released: March 28, 2002

By the Chief, Enforcement Bureau:

I. INTRODUCTION

In this Forfeiture Order ("Order"), we issue a monetary forfeiture in the amount of one thousand ($1,000) to Javier Rodriguez ("Rodriguez"), Boqueron, Puerto Rico, for willful violation of Section 301 of the Communications Act of 1934, as amended ("Act"), The noted violation involves Rodriguezï¿½s unauthorized operation of a CB radio on a frequency for which a license or authorization is required before operation.

On November 7, 2001, the Commissionï¿½s San Juan, Puerto Rico, Resident Agent Office ("San Juan Office") issued a Notice of Apparent Liability for Forfeiture ("NAL") to Rodriguez for a forfeiture in the amount of ten thousand dollars ($10,000). Rodriguez filed a response to the NAL on December 3, 2001.

II. BACKGROUND

On April 20, 1999, during an investigation of a complaint about interference to home electronic entertainment equipment, agents from the San Juan Office, using a mobile direction finding vehicle, observed radio transmissions on 26.715 MHz and determined the origin of those signals to be an antenna located in the backyard of a residence belonging to Mr. Javier Rodriguez (located at Carr 307, Km 6.5 Interior, Boqueron, Puerto Rico). After locating the source of the transmissions, the agents inspected the station at that address and observed that a modified CB radio (a Cobra 148 GTL transceiver) was installed at the station and was connected to a radio frequency power amplifier. During the inspection, the agents determined that Rodriguez was the operator of the station on 26.715 MHz. The frequency 26.715 MHz is in a band allocated exclusively for use by the United States Government. That frequency is not authorized for operation by CB

stations and Rodriguez had no authorization to operate on it. One of the investigating agents verbally warned Rodriguez during the inspection that unauthorized operation is prohibited by Section 301 of the Act.

On October 24, 2001, during an investigation of another complaint about interference to home electronic entertainment equipment, agents from the San Juan Office, using a mobile direction finding vehicle, observed radio transmissions on 26.705 MHz and determined the origin of those signals to again be an antenna located in the backyard of Rodriguezï¿½s residence at Carr 307, Km 6.5 Interior, Boqueron, Puerto Rico. After locating the source of the transmissions, the agents inspected the station located at that residence and observed that a modified CB radio (a Cobra 148 GTL transceiver) was installed at the station. During the inspection, the agents determined that Rodriguez was the operator of the station on 26.705 MHz. The frequency 26.705 MHz is in a band allocated exclusively for use by the United States Government. That frequency is not authorized for operation by CB stations and Rodriguez had no authorization to operate on it.

On November 7, 2001, the San Juan Office issued a NAL to Rodriguez in the amount of $10,000 for the unlicensed operation observed on October 24, 2001. In his December 3, 2001, response to the NAL, Rodriguez argues that he is financially unable to pay the proposed forfeiture. As support, Rodriguez encloses copies of his Government of Puerto Rico income tax returns for 1998, 1999 and 2000 and documents indicating that he is unemployed. Rodriguez also argues that his violations are mitigated by his remedial action and his status as a first offender.

DISCUSSION

The forfeiture amount in this case was assessed in accordance with Section 503(b) of the Act, Section 1.80 of the Commissionï¿½s Rules ("Rules"), and The Commissionï¿½s Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate the Forfeiture Guidelines, 12 FCC Rcd 17087 (1997), recon. denied, 15 FCC Rcd 303 (1999) ("Policy Statement"). Section 503(b) of the Act requires that, in examining Rodriguezï¿½s response, the Commission take into account the nature, circumstances, extent and gravity of the violation and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and other such matters as justice may require.

Section 301 of the Act prohibits radio operation "except under and in accordance with this Act and with a license in that behalf granted under the provisions of this Act."

Rodriguez does not deny the violations alleged in the NAL. In view of the facts set forth above, we conclude that Rodriguez operated without authorization on 26.705 MHZ on October 24, 2001, in willful violation of Section 301 of the Act.

Rodriguezï¿½s violation on October 24, 2001, occurred despite a verbal warning from the Commission following his previous unlicensed operation on April 20, 1999. Rodriguez is, therefore, not a "first offender," and is not entitled to a reduction on that basis. Furthermore, remedial action subsequent to notification of a violation will not nullify a forfeiture penalty.

On the basis of the documentation furnished by Rodriguez, we find that a reduction of the forfeiture to $1,000 is appropriate.

We have examined Rodriguezï¿½s response to the NAL in light of the above statutory factors and the factors set forth in the Policy Statement. Taking all of these factors into account, we conclude that the proper forfeiture amount is $1,000.

IV. ORDERING CLAUSES

Accordingly, IT IS ORDERED that, pursuant to Section 503(b) of the Act, and Sections 0.111, 0.311 and 1.80(f)(4) of the Rules, Javier Rodriguez IS LIABLE FOR A MONETARY FORFEITURE in the amount of $1,000 for willful violation of the provisions of Sections 301 of the Act.

Payment of the forfeiture shall be made in the manner provided for in Section 1.80 of the Rules within 30 days of the release of this Order. If the forfeiture is not paid within the period specified, the case may be referred to the Department of Justice for collection pursuant to Section 504(a) of the Act. Payment shall be made by mailing a check or similar instrument, payable to the order of the Federal Communications Commission, to the Federal Communications Commission, P.O. Box 73482, Chicago, Illinois 60673-7482. The payment should note the NAL/Acct. No. 200232680002, and the FRN No. 0006-0437-80. Requests for full payment under an installment plan should be sent to: Chief, Revenue and Receivables Operations Group, 445 12th Street, S.W., Washington, D.C. 20554.

IT IS FURTHER ORDERED that a copy of this Order shall be sent by Certified Mail Return Receipt Requested to Javier Rodriguez, P.O. Box 661, Boqueron, Puerto Rico 00622.

I agree totally. And Dave, you may be correct that a top loaded antenna may
work better in the proper environment, but in most instances, the Wilson
will allow for better placement that will negate that aspect.

Hi all, just dropped in for a quick question. I thought the screen on all of these came in that puky yellow and orange, but this one looks blue.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=1342501294

Is this a mod, a distorted photo, or did the guy just put some colored plastic over it? (Yup, I sent him an email, asking).

Thanks, and good numbers.

Forgot to mention, you can also remove it a parking lot so as to not advertise that you have a radio in the car. This prevents the local punk thugs from making a special trip by your vehicle to borrow your equipment.

The top-loaded antenna requires a much larger magnet to do the same with, typically a tri-magnet base.

Jerry,

It's indeed interesting, if only to know that the field agents for the
FCC are working.

What would be more interesting would be to see what radio frequency
devices caused the violations (Galaxy's, Rangers, etc.)

Anthony

5405. Directional antennae?

Newsgroup: rec.radio.cb

From: html5lover@yahoo.com
Message-ID: <3ca5c6c3.16938824@news.onewest.net>
Source record: 119765

Is it possible to improve the CB by using a directional ant.? How would one improvise or construct one? I feel it would help in triangulating a single transmitter, like in a S&R effort. Am I right?

Yep, and very good precision can be had with special, simple-to-build
direction-finding antennas. I have one on my site that works pretty
well:

The first thing that comes to mind is why you think that top loading is
better than base loading.
Doesn't this bias boil down to your hate for foreign products?

For my money... top loading antennas have a serious inherent problem of
being "top heavy". This can cause mounting instabilities in mobile
applications, as I'm sure you know.

The base loaded Wilson1000 is not so afflicted...
My opinion is that the Wilson1000 magnet mount antenna is the most practical
mobile antenna out there even though it's a little pricey...

Four Heathkit GW-21 CB Walkie-Talkies from the 1960s. I had a similar set as a kid. I got these with the intention of restoring them but just don't have the time. Two look to be complete and fairly clean with all controls and whip antennas. The other 2 can be used for replacement or spare parts. Two sets of snap-on leather straps included. Someone with the time and ability should be able to make a good pair. Sold as-is.

$40 for all four
Plus actual shipping charges
Send Zip code for shipping costs

Please email if interested,

Mike

1. String a wire to a kite. You don't have to worry about the wind until you hit a stop sign. You can't drive near tall trees or buildings, power lines, bridges, etc, so it might only work for someone in Kansas...

2. Make a mobile Marconi. Put the whip at the very front or back of the vehicle and run several wires to a non-conductive whip at the other end. Could also be used to dry your laundry.

3. Wind many yards of wire onto a spring-loaded spool and mount in the front of the vehicle. When stopped at a light, hook the wire to the car in front and keep a "safe distance" behind.

4. Put a wire brush on the end of a boom that swings out from the side. When driving next to a guard rail just extend the boom and watch out for hitch-hikers.

I just set up new antenna maco 5/8 on my radio Washington set swr's they were fine according to the meter, not even a 1. Set down to talk and they went up to a 2.5. I was wondering if a t.v. antenna would cause trouble it is about 15ft away from the radio antenna. Also what can I do about interference from the radio though the computer sometimes.

Source record: 119781

There is no equivalent to channel 19. FRS radios are designed for
low range (1/2 mile or so) communications. Although they can sometimes
go farther, they are not used in the manner you describe. 27 MHz CB
uses 5 watts AM (12 watts SSB, but with channel 19 that is not a
concern) and should be capable of several miles with a stock radio in a
mobile installation. BTW, the FCC just turned down a proposal for a
'calling' channel for FRS stating the intentions of FRS was for short
range communications.

> level is in RMS, PEP, or Bird watts...

Well, I wouldn't consider it that amazing. Remember that the antenna
on this end probably has about 50-60 dB gain. The antenna on the craft
probably is 30+ dB.

For 8 watts transmitter output, that is the equivalent of transmitting
800,000,000 to 8,000,000,000 watts using a dipole.

From: SideBand <abNO8SPAMlr@csotbs.org>
Message-ID: <3CA5FCDE.1010207@csotbs.org>
Source record: 119784

Actually, Dave, your points are valid...

However, efficiency is an issue. The Wilson 1000 is more efficient for 10 and 11 meters than the hustler is. Why? The Q of the coil in the wilson is higher than that of the hustler. MUCH higher. Higher Q of the coil = higher efficiency = more radiated power. The drawback to this is that the bandwidth that the antenna can be tuned to is smaller. It's a tradeoff.

In general, you are correct, center and top loaded coil antennas are more efficient. If Wilson chose to put the coil in the center (as they did with the Trucker line), it would (and does) outperform the Hustler and Francis antennas. Putting that big coil at the top would be kindof difficult, and require a much larger shaft for the antenna.

Another thing about center and top loaded antennas, a coil at the center needs to be larger (more turns, larger diameter) than at the bottom, and a top load coil needs to be even larger (even more turns, even larger diameter) to equal the same Q AND put the proper input impedance at the feedpoint.

The Wilson is a good compromise antenna (and all shortened antennas are a compromise), radiates efficiently, and does a better job at it than the K40 does. The Francis fiberglass whips can't perform as well, and the Hustlers do a good job over a broad bandwidth, but they're not as efficient in the tight band CB is.

I admit, Wilson's 1000, 5000, and Trucker line antennas are a bit pricey, as well, but some people will pay more for the efficiency they want on the band they're interested in.

-SSB

It's brown, I guess. Made from flour and oil. What are the others made from?

Right. And most of the readers of this NG have DC amps with more than enough
"pills" to loaf along at that wattage all day long. <<g>>

I have observed here that CB is essentially a mobile medium where the ham bands have been traditionally a fixed service. This meant in days past that mobiles before the days of FM had to be horizontally polarized on VHF for local comms. On HF or skip, who cares.

This led to 'flat-side' mobiles for six meters, the biggest of which was the Saturn 6 or Halo antenna which was essentially three rings in a three-foot circle on a pole bumper mounted, tuned in the twilight with a 20 watt round fluorescent tube hanging on rubber bands in the middle. People would point at you driving around but they actually worked pretty well.

Now it would seem that a similar device could be made for 11 meters using Bugcatcher mounting techniques and lined with the ubiquitous purple neon tubes. Might not work worth a shit but every lo-rider in town would have one and they could talk to each other.

Course someone would buy a line-ee-ar to make his tubes brighter but WTH.

Dick

That's pretty close for such an electrically large object as a TV
antenna, an is probably causing some reflection. But you still might
check for loose connections or bad spots in the coax.

> Also what can I do about
>interference from the radio though the computer sometimes.

If the radio is modified, peaked or tweaked, get it fixed. If you are
using a power mic, turn it down. In other words, quit trying to peg
the meter. You could also try putting an RFI filter on the power cord
of your radio.

the worst antenna on the market to set up and maintain. once you get your match straightened out and find you cant keep it take antenna apart and clean all joining pieces with light sand paper or steel wool then reassemble and retune
You didnt describe the computer interferance but if you hear yourself on your speakers try looking at the way your speakers are laid out .If your speakers are spread as far as possible apart try moving them closer and coil up excess wire or find chokes for this at your radio shack store

Bad advice ,spark! Don't worry about your SWR when you talk. SWR only matters with a dead key. It will go up when you talk, because it does another watt or so when you talk, so the SWR reading is higher; BUT you have your SWR meter set for a dead key, NOT your talking into it. Also DON'T un-tune your CB--leave it tuned up. There are some Hambos out here giving real BAD advice to CB people that are NOT CB shops and don't have much experience with CB's @ all! You have NO LOOSE connections or "bad spots" in the coax IF you are receiving far and your SWR is low.Your SWR is set with your TV antenna where it is--DON'T WORRY about it--BE HAPPY ! The UNHappy hams on this NG will have a hammer & sickle on your T shirts IF you listen to them much! As far as computer noises--The only thing I can think of is wrap the pooter with tin foil. I get it on the TV channel 3 sometimes. Turn pooter OFF when having the CB on!
Dave!!!!!!!!!!!!!!!!!!!!

The spec sheet sent with the Maco is wrong. Don't remember the exact dimensions, but I do know it is too long. Try shortening it, and see if it does not come into compliance.

Jay: Your help is needed.

5441. Re: motorola talkabout 14 channel NO CB 19 !

Shawn,
Anything close to your antenna (no matter what it is) will
change things. The solution is to re-tune the antenna 'in
place',
or up/down till it's right.
Computers are very RF prone. About all you can do is 'throw'
ferrite torroids and shielding at them. Distance is the most
effective 'cure'.

Ed and Ted went to the fair.
They came across a small crowd gathered around a stall and went over to take a look.
"What's going on?" Ed asked one of the crowd.

"We're watching to see if some idiot can ride that bronco machine," he said nodding towards
a fearsome looking machine. "Nobody has managed to stay on for the full three minutes yet.
And there's a prize of $1000 for anybody who can.

"I can do that!" Ed said confidently.
"No you can't," said Ted.
"I sure as hell can!" said Ed.

"You'll get yourself killed if you try and ride that monster," said Ted.
"Watch this," said Ed and climbed aboard the bronco machine.

The machine thrashed wildly, up and down, from side to side, around in circles but still a grim-faced
Ed clung to its back. After two minutes the machine was bucking almost vertically and spinning until
Ed was a blur. But when the three minutes were up Ed was still on the machine's back acknowledging
the cheers and cries from the small crowd.

He dismounted, collected his winnings and rejoined Ted.
"Where in hell did you learn to ride a bucking bronco like that!?" Ted asked.

"Remember three months ago," Ed said...
"When my wife had whooping cough...?"

===

Hey, they get us all ways.
Our fuel is 75% tax, the road tax keeps going up... and then they want to start charging us again when we actually use the car we have taxed by charging tolls to use the roads.

Our petrol prices went up during the Gulf war... and never came back down. A war or "crisis" is always used as an excuse to raise prices, and they never bring them back down after.

At one time, when we sold petrol by the Gallon, increases were a penny or two per gallon. Now that we sell it by the Litre, the increases are still the same amount, but per Litre.
I once worked in a petrol station, when it was sold by the Gallon. The pump registered totals mechanically on the side of the pump. The total fuel sold was measured in Litres, as was the tank levels. The manager boasted how the company had 2 ways to convert between Litres and gallons... one when working out prices, the other when working out how much tax to pay.

The problem is that there is no way (provided) to keep the ends of the ring
the required 1" apart unless you add a small, 1"sq. block of non-conductive
material (delrin or teflon). This will keep the ends the required distance.
Also, antenna overall length is important. Make your gross adjustments to

get you in the ballpark with length (done at the base where the rubber grommet is) then adjust the 1" ring distance.
Without the 1" block, a hummingbird fart will throw the match off. :-)

It's an invalid item now......

I do remember those things being that orange color, but I could be wrong. It isn't all that hard to modify it for a blue screen or any other color. I believe all you have to do is change the LEDs that backlight the display. I've seen this mentioned as a modification for Yaesu VX-5r ham rigs. These are not big, bulky machines so if you can do it to VX-5s you can do it to a 79-290.

Hope this answers your question!

Hello Shawn: You got some pretty good replies here.

The SWR of a MaCo V5/8 is like a carp shoot. BECAUSE not all the parts and pieces are dead nuts the same, variations will happen, in lengths ect, that will effect the SWR.

I put a MaCo V5/8 together, reading the assembly instructions, while cussing the cheap shit clamps. I replaced the factory supplied clamps with the good expensive marine grade stainless steel clamps. Just one bad connection will make the SWR go nuts.

Its possible that you have a intermittent connection, the tuning loop has birds land on it, and take off causing the causing (MaCo Bird Syndrome, untune-o-matic) the loop to change spacing as Jeff said.

Jeffs wise word where:
< Without the 1" block, a hummingbird fart will throw the match off.
:-)

To fix the SWR problem, you will need to inspect all the antenna connections, that is the vertical element, and the ground plane radials, and the tuning unit. Is your coax properly soldered, the shield connection too?

Be advised, the MaCo V5/8 isn't the easiest thing to tune. After following the instructions to the letter, I saw that that antenna had a SWR of 1 to 1, at 26.700 MHz, and I tuned it a little, and ended up with about a 1.3 to 1 on channel 20, and some say thats hard to do.

Paul said it was "the worst antenna on the market to set up and maintain." I buy that, but the Sigma 4 I believe beats it out for trying to tune it up.

The interference indicates that RF Energy is coming back to the radio, down the coax, from a high SWR and creating the interference. Or the local field energy is getting into the computer. First thing is to get the SWR on your operating frequency as low as possible.

What type interference are you seeing?

Jay in the Mojave

First, and I have said this countless times, I'm not a ham (yet). I am
a professional with several years of higher education and several more
years of practical experience. Regardless, most hams have a better
knowledge of radio than most CBers because it's required, which is
probably why so many can't pass the simple test to get their license
and subsequently resort to illegal operation. And considering that CB
is just one step above the walkie-talkies in the toy department, a CB
tech certainly doesn't need to have any intensive technical training
or experience. Now I know that the simple concepts of forward and
reflected power and their RATIO are not very complicated, but maybe
it's better you leave the technical advice to us 6th plank commies
that have studied all those books you burned and know what we are
talking about.

>It's brown, I guess. Made from flour and oil. What are the others made from?
>

Actually the base of flour and oil is the same for all 'colors' of roux, but a red roux can also have butter instead of oil, and some cayenne pepper or crushed peppers, etc. And if I'm not totally mistaken, the difference in the white/creme/brown-colored roux is how long you let it cook before utilizing it. If you brown the flour longer, a darker roux will develop, adding a slightly different texture and flavor to the dish. The less it's cooked, the lighter it is, and so on.
Anyway, what my roux-rambling has to do with CB is beyond me... but I hope your gumbo is awesome. Enjoy!

Bill, I doubt that. 30 dB gain, sure. 40 dB, perhaps. 50 and more,
I doubt you could do that. The problem is, the larger the dish becomes
against the wavelength, the harder it is to hold the shape of the dish
to a true parabolic shape. I wish I had that graph of the gain of
parabolics at different frequencies. It showed the Arecibo (not sure
of the spelling) dish. It went up with frequency ... to a point .. then
leveled off and DROPPED DOWN due to the shape no longer being held close
enough to get all of the wavefront in phase to the antenna. The same
holds true with smaller dishes. You might find that neat old 12 foot
satellite dish worthless for 24 GHz, even though a perfect dish of that
size might have a gadzillion dB gain.

Keith,

If ya does the crime, then ya has to pay the piper. I wouldn't be surprised to see more of these come along as time goes by. I kept posting that this sort of thing was going on, but some fellas just laughed and said such things as "FCC has better things to do than hassle a poor CBer for freebanding". But that is part of the trouble. The offenders just cannot see, nor do they comprehend, that OTHERS have use/need of the spectrum as well, so they can't understand why they get nailed when they interfere with others because they only see their own side of the argument.

Jerry

While it is NO big secret that EEI SUCKS MONKEY ASS, I want to know the secret to raising the cash needed to go from filing BANKRUPTCY as a dealer and becoming a "distributor".
They have opened a new site and I will not do them the favor of naming it here. The stupid fucks that are doing the change over weren't even swift enough to take out or change the EEI text from the product descriptions.
This should make all the people who lost money to them feel very good knowing they were taken for a ride and paid the fare.....But the car never moved. This is probably all a move to make the fines imposed on them go away as the company will have appeared to have been dissolved in bankruptcy.
EEI is back so go start buying your shit from them again you stupid bastards!

Put this into my rig with one of those "cell style" through glass small antennas. I would imagine most of my problems are from the antenna. Can barley catch the weather band. I have an old bearcat 55 handheld scanner with a rubber ducky picks up the weather like the announcer was in my bunk.
1. What sort of antenna should I get I have a base with a threaded nub sticking up from the rear middle of my roof I figure this is from the previous owner. I could find something to screw on to that maybe.

2, How do you peak and tune one of these units, My wife and I are moving to Northern Maine and I think we are going to need all the juice we can get to get out.

3. Should I replace my unit and gamble with one that claims to be peaked selling on e-bay.

4. Does anyone have a high mod peaked unit they are trying to sell?

Any additional info would be great!

Are there sights that help with these mods!

Thanks, Kevin

>

In this case, Sparky, I think Dave simply does his touch-up and leaves the
meter on reflected. So it swings when he talks, BFD. He has a
non-conventional approach to reality, that much is for sure.

As you have observed the Amateur exams are nothing to write home to
Grandma about. So it is a bit much to say that individual amateurs are
apriori more knowlegeable than a CBer in all areas. So you are going to
get some deserved flak on the statement but as a group, you are quite
correct. And there are a number of reasons why.

First off, you are a bit unusual in being educated and not having an
Amateur ticket; go up to rec.radio.amateur.policy and you get such guys as
Ed, W1RFI who is Mr. RF Interference, Cecil ex-W6RCA now W5DXP retired
from Intel, Jim N2EY who can design and build with the best of them, and
any number of guys who do it or did it for a living. If nothing else we
can get some damned good advice fairly quickly. Go over to
rec.radio.amateur.antenna and you will see discussion of conjugate matches
that leave my head spinning but I know more about antenna tuners than I
did before after fighting thru the math.

And the ARRL is a good source for poop period, the Handbook, the Antenna
Book, etc have been around for decades. There is no way to be certain any
one has read or understood the books but they are there. I get something
new every time I haul it out. But I had a question about decoupling in
mobile installations better handled here than the ham groups. The guy who
does the police radios is likely a ham so you learn a few dirty tricks

from him. And most of the engineering staff at the local broadcasters are also hams. The resources are there and a lot of mythology disappears a bit faster.

CB is very specialized where the ham bands require more generality. Rookie CBers turned Amateur are generally pretty easy to spot by such things as refusal to give name or location on the local repeater convincing everyone vaudeville is not really dead. But a lot of times it is simply the approach that Amateur Radio is CB on a grand scale. Nooop. While there are 40 meter beams, the tower has to be stolen from an old TV station and the rotor says Cummins. So you learn about tuning and loading real damn fast. Some months back, we had a newbie Tech buy his line-ee-ar for 27 MHz and it was pretty apparent he had never tuned a pi-section that was not rhubarb in his life and wouldn't know one if it drove over his toes on a tricycle. He was merely an affluent idiot and everyone has them. To some extent, the environment forces a more reasoned and general approach. But CB is technically interesting in that it is kind of where HF meets VHF so there is an interesting stew of techniques in use.

But don't overrate us, Sparky, most guys are not involved professionally and we have our button pushers, too. And radiocops, and lids, etc. ad nauseum.

Dick NBK

Source record: 119689

>>Actually, Dave, your points are valid...
>>
>>However, efficiency is an issue. The Wilson 1000 is more efficient for 10
>>and 11 meters than the hustler is. Why? The Q of the coil in the wilson is
>>higher than that of the hustler. MUCH higher. Higher Q of the coil = higher
>>efficiency = more radiated power. The drawback to this is that the
>>bandwidth that the antenna can be tuned to is smaller. It's a tradeoff.
>>
>>In general, you are correct, center and top loaded coil antennas are more
>>efficient. If Wilson chose to put the coil in the center (as they did with
>>the Trucker line), it would (and does) outperform the Hustler and Francis
>>antennas. Putting that big coil at the top would be kindof difficult, and
>>require a much larger shaft for the antenna.
>>
>>Another thing about center and top loaded antennas, a coil at the center
>>needs to be larger (more turns, larger diameter) than at the bottom, and a
>>top load coil needs to be even larger (even more turns, even larger
>>diameter) to equal the same Q AND put the proper input impedance at the
>>feedpoint.
>>
>>The Wilson is a good compromise antenna (and all shortened antennas are a
>>compromise), radiates efficiently, and does a better job at it than the K40
>>does. The Francis fiberglass whips can't perform as well, and the Hustlers
>>do a good job over a broad bandwidth, but they're not as efficient in the
>>tight band CB is.
>>
>>I admit, Wilson's 1000, 5000, and Trucker line antennas are a bit pricey,
>>as well, but some people will pay more for the efficiency they want on the
>>band they're interested in.

Shawn, you mentioned interference to your computer. If it is simply audio comming over your speakers, this is a more common problem than many think. Clean, legal signals can cause this and it can be cured with some ferrites on the speaker wires. Assuming your 5/8 is a vertical antenna (which I assume), it shouldn't be bothered by a horizontal tv antenna - there is a 20 dB LOSS with cross-polarization (not to mention the additional 20 dB loss of the reflected signal into the vertical antenna!). I am not familiar with the Washington nor the SWR meter, but it IS possible to have a higher SWR under modulation - AND something to be WORRIED about. If the radio has had filters cut or is being overmodulated (or overdriven in SSB - yes, you CAN feed too much audio to SSB and 'flattop'), you can be putting out spurious signals. These signals, if very far removed from the channel you are operating on, may well be falling outside the 'sweet resonant' spot of your antenna. Those signals will be reflected back to the radio and show up as an increase in SWR. Easiest thing I can think of is have a friend a mile or two away monitor your signal and tune up and down the band and see if he (or she) can hear 'splattering'. If so, get the radio fixed.

5481. For Barter: ICF-2010

Newsgroup: rec.radio.cb
Date: 2002-03-31 03:01:50 UTC
From: at_the_helms@yahoo.com
Message-ID: <621d1b6e.0203301901.21cd610a@posting.google.com>
Source record: 119691

I have a Sony ICF-2010 for barter.

It was purchased new in 9/97 from Grove Enterprises, and comes with original packaging, related materials and receipt. I keep it covered when it's not in use and even oil the antenna periodically. It's in perfect, unaltered factory condition, but I simply don't have the time to devote to the radio much any more.

I'd like to trade it for a decent 800MHz handheld scanner (preferably unblocked), transceivers of any type, or a base CB unit in similar condition. Mods are OK as long as long as it improved performance and was done professionally.

I paid $364 for the 2010, but I'm not expecting a dollar-for-dollar exchange here - just a fair swap for respectfully handled gear that I have a realistic use for. I'll consider anything you've got, except for junk and stolen property.

I think it's only fair that we each pay our own insured shipping. If you're interested, please contact me directly. I'm in no hurry and Thank You.

Shawn, I forgot something. The tv antenna itself shouldn't be much of a problem, but the metal mast likely is. If the mast is substantial (say much over 5 feet), it may well bother you a bit if it is in close proximity to your CB antenna. That will have nothing to do with an increase in SWR under modulation, however. It will probably affect your signal in the horizontal plane (directivity). It is probably mind over matter - if you don't mind, it doesn't matter.

And taken that way here as well. Thank you.

But I cannot resist mentioning that this is one of the few years in which Easter in both the Eastern and Western Churches is the same day (the Eastern Church requires Easter to follow Passover, the Western Churches do not) plus Passover falls in exactly the same sequence that it did at the time of the Jesus events on Thursday which means sundown Wednesday to us. So Good Friday was in fact on Wednesday and the three days in the tomb were Thursday, Friday, and Saturday; the tomb was found open after sunset in the twilight on Saturday evening. So the sunrise vigils are a tad late. And Easter Sunday is indeed the Feast of Ishtar.

They got the three days right at Nicea but fritzed up the days, most likely because there were no rabbis to point out that you could indeed have two shabbats in the same week with a required feast in between as well. No conspiracy, just lack of information.

That this is true should surprise no one. A lot of cultures have springtime fertility rituals. One of the world's great phallic symbols is the Nebraska capitol building in Lincoln known as 'The Penis of the Plains' complete with a small gold dome on a shaft of a building with a statue or ejaculation on top called The Sower spreading wheat seeds around

downtown Lincoln. http://www.capitol.org

It is also true that because crucifixions generally took a bit more than 4-6 hours and the schedule prevented checking on the stiff for a few days (and most cultures have a problem with burying the undead which is solved in any number of ways including keening at the Irish wake to literally wake the dead) there are those who see some evidence of fraud in the scheduling.

Suit Yourself.

Train, I recall seeing a message from the CEO - and I believe that EEI was something like a wholly owned subsidiary of the large corporation - that stated something like 'I have no knowlege of ...', etc. Simple. You file bankruptcy for the small company - which won't affect the large (read 'the real') organization behind it. Then you simply open another corporation. Nice country we live in, huh? I think a local corporation is doing the same thing. They want to dump the union agreement signed last year, so the parent company in France is bankrupting the local corporation (a wholly owned subsidiary). My guess is they let it go bankrupt, then offer about five cents on the dollar to creditors to buy it back. Then open shop under another name. Oh well ..

It does, thanks. You've both been very helpful. I guess I need some kind of tech wizard to send my radio to. Actually, I have two face plates for it, so I could send one away, just to see how it looks. Suggestions?

By way of thanks, I'd like to invite you guys over to the group I hang out in. alt.smokers.pipes I post there the same as here. Right off the bat, some of the folks there seem stuck up, but that'll be a first impression. Few, if any, flames, just good discussion about a lotta stuff, but mostly pipes and tobaccos. Lots of humor too.

They have a program there called PIF, (Pay It Forward). The regulars, myself included, send both money and pipes/tobacco to a common fund, and when one of the member's is a little down on cash, they can request a PIF package. Here's where you might be interested. Newbies to pipe smoking can request a package, too. You'll get a handful of good pipes, a few bags/tins of good tobaccos, maybe a pouch, lighter, pipe tool, or some pipe cleaners, too.

Here's the link to our home page, just click the PIF link, check it out. I'd refer you both if you'd stop by, be civil, contribute to the conversations, have a laugh or two. Interested?
http://www.aspipes.org/

Thanks to both of you.

I just dug out my old President Grant DX - the PB-099 board, IIRC. Seems that sitting on a shelf for a few years hasn't done it any good. The channel display seems to have a display issue. As I change channels, at least a couple sections of the display will either flicker or go out completely. The volume control seems odd too. I get static and the volume will vary (more than it should) as I turn the rig on and increase the volume.

Anyone think this is more than a little oxidation in the channel selector switch and volume control?

What is considered a decent cleaner for parts like these?

thanks!

Well, I hate to rain on your "CB" parade but 11 meters (Citizen Band for you untechnical types..) was a ham band in the 50's. The Old DX-35, DX-40 and the VF-1 VFO and other ham rigs still have the 11 meters band on them.

Source record: 119809

Yes, Mark, there is...

The Q of the coil (and therefore the efficiency of that coil) is higher in the 5000 than it is in the 1000. Granted, we're talking about a couple tens of milliwatts difference in radiated power (assuming a 4 watt input), but that also helps the receive end as well. the 5000's will be slightly more sensitive than the 1000's are on receive, due to the higher Q of the coil.

What you need to decide is if those few milliwatts or that 1/20 of an S-unit are worth the extra $20. For CB, I don't think so... For a HAM on 10M running legal limit, there may be some benefit to spending the extra $20.

It wasn't like I was saying that hams wrote the book on radio. CB is a
plug-n-play technology. That's the way it was intended and that's the
way it is used by most. While amateur radio looks like it is swimming
in that direction, I don't have to be a ham to see that it isn't there
yet. AR is still a service that promotes both radio and electronics.
And of course there will always be some that excel beyond their level,
and some that still can't tie their own shoelaces. So, over all, I
would say the statement is fairly accurate.

My mistake was responding to dave in the first place, and for that I
will take my lumps...

Thanks Chris and Mark,

I lost that bid for a Wilson 5000 on ebay, and was actually glad about it.
After some research, I realized that it was the same price as a new store
bought one. So the order's going in to John at Panther Electronics, first thing
Monday morning. I'm using it with a HTX-10, so it''ll only be for 10-meters.
Now where'd I put that Texas Star?...just kidding, Aaron. :-) However, be
advised...I could if I wanted, and legally at that. :-p

Might I add that I've also replaced the supplied SO-239 chassis mount with a silver/teflon example. (You caould even use a bulkhead N connector, if you feel so inclined.) I moved it to the bottom of the bracket so the PL-259 fits all the way and added a UG-177/U hood on the top. The UG-177/U's exit hole is designed for RG-58/U, but I also replaced the feed wire with marine grade insulated #14 and a stainless steel clamp. When sealed and reassembled with all aluminum pop-rivets, the result is not only bullet-proof, but really looks good as well.

I hadn't thought of this before. Gimme ideas, guys. I'm the first one to laugh at myself so I'll share this initial flash of genius (My dad calls it a "senior moment.") I had with you guys. I said "hey, great idea! So I'll add a 1" teflon sleeve and a longer stainless steel bolt between the upper and lower ends of the tuning ring. Heck, not only will it maintain the 1" spacing, but it'll keep it aligned too, right?" I had totally forgotten the purpose of the exercise and was quite prepared to short the upper bracket/ring point to the lower same by using a common long bolt and three nuts...but I was sure gonna maintain that sparation with that teflon sleve. Duh! :-) Take it easy guys.

Professor,

You make a good point about top loading. Let me make a point about top loading aside from efficiency. We use Wilson 1000's on most of our pickup trucks. They have hit overhead obstructions at highway speeds, such as tree limbs, that actually put a bend in the tip of the antenna. Think what that would do for a top or center antenna. It would probably totally destroy the antenna vs making it look a little kinky.

Bill

MuCollum Spark-Gap:
I was just explaining to the guy WHY you don't need to worry about the SWR when you talk, and gave a real life explanation & reason WHY he need not woory about it, but like always, you College EGG HEADS & spark-gap Hambos have to bash me somehow like I don't know what I'm doing after 22+ years as a 1 man operation CB shop (using a Bird meter to boot!)! You college NERDS have NO IDEA what reality is. Your world is upside down! Jesus said WE would turn your world upside down, to make it right side up! Did I not explain it right for the man, or not?!
Dave!!!!!!!!!!!!!!!!

YOU tell THEM Mr. Wesser! My sentiments exactly, except for the language. I met a guy from Ohio also with 42 years experience. I've only been doing it 22 years, and I HEAR YA on what you said about Sparky's technical eggheaded CB knowledge. When I was green, I would NOT EVEN DARE to give any kind of advice. I SHUT UP'd and listened & learned. The problem that college makes is that it's learning isn't based on the FEAR of GOD, so therefore Knowledge puffs up these little arrogant wannabee CB techs or whatever they are, and we that ARE GOOD in what we do in the field just listen in disgust! I'm sure that YOU don't put "modulation kits" in, but these little weasels would probably DARE to argue with us the benefit of such nonsence! Are you ashamed of these communist NG Hams? Thanks for being THE MAN !
Dave!!!!!!!!!!!!!!!!!!!

While most people know the FCC is out
there, if you read what was said Jerry, he
should've paid attention to his neighbors.
I'm sure they told him he was trashing their
equipment, but ignored them. Then in a real
brilliant move, caught by the FCC not once
but twice, then does it a third time, not
the smartest person.

HOW DARE YOU little spark-gap WEASEL ! What I am saying (and probably Wesser) is that when you talk OR whistle in a CB, on a BIRD meter (average power, NOT peak) the power GOES HIGHER a watt or so. So what I said is that on his cheap SWR meter, he would have to re-calibrate it for the modulated signal, instead of the un-modulated carrier, which he did. He talks into the mic, and the SWR goes up. POWER does NOT affect the SWR @ CB freqs. (or maybe any other). So it appeared to him that the SWR was worse when he talked. BUT if he calibrated it when he whistled into it (or a tone), the SWR would be the same. This IS how it is in the real world. SHAME ON YOU Sparky-GAP for posting what you said about a 42 year VETERAN CB fixer! YOU SHOULD SHUT UP ! You KNOW NOTHING !!!!!!!!!
Dave!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

You mean it ain't real Mexican, right?! I KNOW you are right. The small independant Mexican restaurants in the southeast here, as well as in Ohio, have the BEST Mexiacan food; the corporations like Chi Chi's probably aren't run by Mexicans, and if they were, College ruined them into the corporate system, so they make Mexican food taste like McGaggles!

Yes I did add your name only after you have glorified me at the end of
every post you make for the past year. Yes I am guilty, of falling into your
same game, remember when you couldnt make a post with out mentioning
everyname I used. I am sure I could do the same for you to so you don't get
1 up on me. When is your birthday I will buy you some more hankies.

>Dave!!!!!!!!!!!!!!

thats what I meant. I do not like chain reteraunts. Having been the
head chef at several independant fine dining establishments. As well
as having an appreciation for good food I despise chains. You can get
a much better quality meal at a mom and pop place in a little hole in
the wall. A good example is a place in Hudson Mi. called the County
Kettle, great home style food large portions, at a very reasonable
price. MCnasty's, Burger Barf ect suck, the quality is poor and
unfortunately the society today is hell bent on fast food, fast
everything. Thats why the health problems are higher. Look at where
our ancestors came from. Whether you are from germanic, french,
italian or any other background. the food they eat in our native lands
is alot healthier. Yet the experts say that the food is bad for you.
The problem is that the food is not natural, it is all scientifically
engineered. I grow my own vegetables it is all done organically.

Federal Aviation Administration
800 Independence Avenue S.W.
Washington D.C. 20591

Dear Sirs;

I have the solution for the prevention of hijackings, and at the same time getting our airline industry back on its feet.

Since men of the Muslim religion are not allowed to look at naked women we should replace all of our female flight attendants with strippers. Muslims would be afraid to get on the planes for fear of seeing a naked woman, and of course, every man in this country would start flying again in hope of seeing a naked woman.

We would have no more hijackings, and the airline industry would have record sales. Now why didn't Congress think of this?

Sincerely,
Bill Clinton

Happy Easter

Thanks Chris,

I'm really not much of a mobile op, but this has been an interesting thread nonetheless. I bopped on over to www.wilsonantenna.com and read the specs of both. While their power hadling claims appear to be a bit "generous," the 5000 does seem to be worth the additional $15. (You listening, Bert?) Take care and 73.

Sounds good. Where do you get the UG-177/U's? Could you actually use RG-400 as
the connecting wire from the SO-239 to the ring clamp?

Now that's funny. How about a slightly longer bolt for each, the upper pointing
downward and the lower upward. Then a small piece of rubber hose slipped over
the protruding end of each to keep them one inch apart.

Some people have been asking about the progress of the new SkyWave amplifier. I have completed the PCB and will send to the fabricator tomorrow.

I've been toying with the idea of soliciting several "beta" testers on the NG. I would supply them a raw PCB and a BOM (bill of material). They would have to purchase all electrical components and a heat sink on their own to get it working. I thought this might be a good project for some out there that want to learn, as well as providing me valuable information through feedback. Email if interested...

P.S. I have started working on the operation/instruction manual and that should be a good source for inquiring minds... see link http://members.core.com/~bgriffey/SkyWave%2028979AB%20Linear%20Amplifier.htm

They say that the food that is eaten in europe is bad for you. Well
those people live to be older and healthier than we do. Why? Because
it is natural food, not all this fast food, proccessed engineered
crap.

5552. Blonde rents a movie (OT)

Newsgroup: rec.radio.cb
Date: 2002-03-31 23:23:18 UTC
From: Keith Hosman <arcweb@bnnorth.net>
Message-ID: <2h6fau4uga3fijk3dt2ttc5mm8tmu4t3uo@4ax.com>
Source record: 119862

A blonde decides to do something wild she hasn't done before, so she sets out to rent her first x-rated adult video.

She goes to the video store and, after looking around for a while, selects a title that sounds very stimulating.

When she arrives home, lights some candles, slips into something comfortable, and puts the tape into the VCR. To her disappointment, there's nothing but static on the screen, so she calls the video store to complain.

"I just rented an adult movie from you and there's nothing on the tape but static."

"Sorry about, that." replied the store clerk. "We've had problems with some of those tapes. Which title did you rent?"

The blonde replied, "It's called 'Head Cleaner.'"
